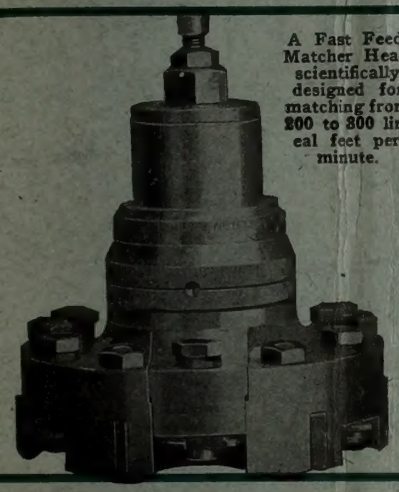
HEAD OFFICE: OTTAWA, ONT.



A Fast Feed Matcher Head scientifically designed for matching from 200 to 300 lineal feet per minute.

The SHIMER Fast Feed Expansion Matcher Head
With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.
These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.
The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.
The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market. WRITE FOR PRICES

BOLINDER'S Automatic Box Board Machine

A machine that converts narrow lumber into high grade box shooks at a minimum cost.
The machine takes rough boards and **Planes, Dovetails, Glues, Joints,** and makes up finished Box Sides and Ends to exact dimensions required.
The entire operation is performed automatically from the time the boards are fed into the machine until the finished box side or end is delivered.
Capacity up to 12,000 S. Ft. finished shooks per 10 hours, with only two men at the machine.

Pulls Heavy Logs Through Ice and Snow

Monarch NEVERSLIP Tractors

A winch used to replace the regular power-belt pulley enables the Monarch to be used as a travelling power crane, which in loading and other similar work effects numerous savings in operating costs.

Over deep snow and ice Monarch Tractors pull heavy loads with ease.

Broad manganese steel chain treads give it sure foothold on the most slippery surface.

Its weight is distributed as though borne on a platform.

And these broad treads which grip the ground over an immense area convert the full power of the Monarch's motor into pulling power.

Short turning radius — the Monarch turns in its own length—makes it the ideal pulling power for the narrow, winding roads of the lumber camp.

The Monarch Tractor is economical to operate, for its fuel is coal oil but gasoline may be used if desired.

Write for Catalog to Dept. C.L. 2.

Does this Interest you?

SUPPOSE your stock has reached a low ebb—where your need for more stock becomes urgent.

Isn't it worth a great deal to have your order shipped just twenty-four hours after it is received?

When necessity requires such action, that is just the sort of service we can give you. Our big service yard at Logansport, Indiana, where we carry 4,000,000 feet of quality dry stock, makes such service possible.

Your order in our hands always means just this—Satisfaction for you.

New Business

is the life of trade, but there is so much competition now-a-days that it is harder than ever to get the new business. Live, reliable, advance information regarding

Building and Engineering

contracts enables you to make a well-directed efficient effort for more sales. Such information you get through the use of MacLean Daily Reports. You can have on your desk every morning a batch of reliable, timely reports of contracts that will result in a keener sales force, more orders, and in cutting down selling costs for you. Hundreds of well-known firms are profiting by their use. Why not you, too?

Write for full information.

BUFFALO FOR HARDWOODS

"LET BUFFALO DO IT"

Let Buffalo dealers ship hardwood lumber to you.

Both Northern and Southern Hardwoods flow logically into Buffalo. The reasons: the Great Lakes and Buffalo's 25 railroads.

Buffalo carries a larger stock and a greater variety of hardwoods than any other market in the world.

Buffalo dealers can ship at once and get lumber to you quickly.

Twelve Million Dollars

Our increase in business for the past year amounted to over 12 million dollars and the last month was even greater than the first.

This tremendous growth is due to the fact that we endeavor to do the right thing at the right time, in the right way; to do some things better than they ever were done before; to eliminate errors; to know both sides of the question; to anticipate requirements; to master circumstances; to act from reason rather than rule; to be satisfied with nothing short of perfection.

Practically every large lumbering operation throughout the United States and Canada carries a portion of their fire insurance with us because we have stood the test of time; we have won their absolute confidence with our eleven years of courteous business transactions and prompt payment of losses.

Our thoroughly trained force of field men make regular sixty-day inspections on all properties where we have liability and it is their duty to see that every policyholder receives the same good treatment.

We solicit business on first class properties only, where sound protection is more important than a low rate and to such concerns we offer the last word in fire insurance indemnity and service.

Our Business Purpose

In order to be permanently successful in a strictly commercial sense, we have always realized that we must render a sound service. If our service was good —something above the ordinary—if we made service the first consideration, with proper business management, a good volume of business would naturally follow. And so it proved.

To be known as the Insurance Medium, which takes excellent care of the business which it handles—to gain a reputation for intelligent and skillful handling of the insurance problems of our subscribers, has been our purpose in the past, is our purpose today, and will be our purpose for the future.

New business—yes of course, we desire it, but it is the quality and efficiency of our service with which we shall be more concerned than the amount of insurance you carry with us.

OAK LUMBER

ANNUAL CAPACITY:
130,000,000 feet.

OAK is called "The World's instinctive symbol of **Strength, Endurance** and **Dignity.**"
OAK is described as "The Silent Partner of Architecture and the Arts, throughout history."
OAK is the standard for all comparisons of other woods, used or sought to be used, in the same fields of consumption.
OAK is the finest, most durable, most satisfactory cabinet wood in the world.

OAK has its competitors, but for these competitive woods it cannot be claimed that they are better than oak. For some it is claimed that they are "just as good," that they are cheaper, that they can be made to sail under false colors, by imitating expensive, desirable woods; but oak has stood for ages upon its own merits of quality, of substance, texture, beauty, durability.

Of course all oak is not of equal desirability. Oak that grows intermingled with soft woods is less valuable than that produced from a pure hardwood area.

Generally speaking the thicker the stand of oak the better the quality—the more perfect the texture.

Our hardwood forests in the Appalachian area are unexcelled.

The actual cut of our saw mills in this territory shows that our stand of oak is from 30% to 65% of the total stand of the timber—figures which brand our production of oak as in a class by itself. So perfect is the oak timber in some of this area that 25% of the total production of oak lumber is 1s and 2s and 23% No. 1 Common.

Many dealers and users who have once used our oak prefer to purchase only our manufacture.

With such SUPERIOR LUMBER and the EFFICIENT SERVICE we render, we can adequately supply every need of all our customers.

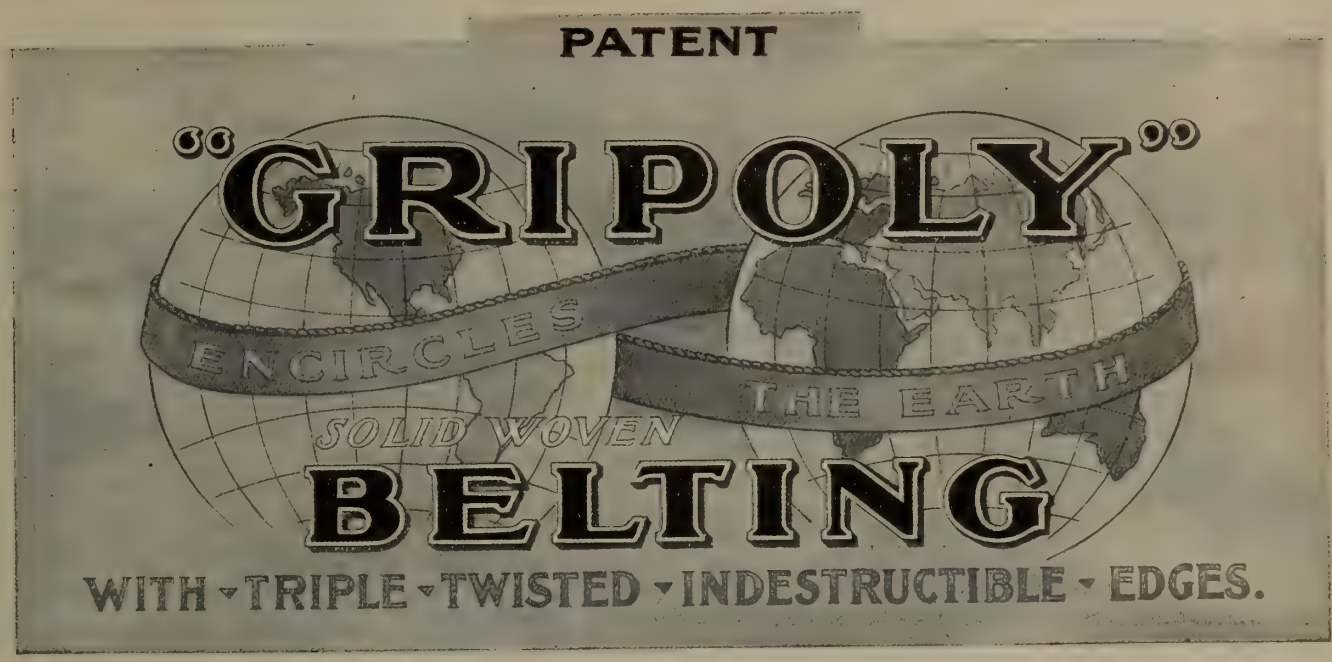
Transmits More Horse Power



The wear and tear, and the atmospheric conditions prevailing in the saw mill, are severe tests for the very best beltings.

Costly breakdowns have occurred in many instances, that were directly due to the sudden failure of a belt. The patent, solid woven, "Gripoly" Belting **never fails**.

It costs less money than double leather belting, and gives greater satisfaction. It is stretchless, non-slipping, and will transmit more horse power than any other belting.

Proof against oil, acid, steam, water and changes of temperature.

Edges are guaranteed non-fraying.

CROSS-CUT SAWS

MADE IN MONTREAL

Fast and easy runnings saws are a big help in the timber operation where production counts for everything. If the saws used are the best, it stands to reason that both the sawyer and boss are to reap the benefits. It has been proven that for falling or bucking the Simonds Crescent—Ground Cross—Cut Saw leads all others. It is made of the finest saw steel obtainable and holds its keen cutting edge on the hardest kind of work. Then, too, it is an easy running saw that does not bind in the kerf.

Write us about your saw requirements.

Let Canada Keep Her Pulpwood—Export Her Paper

Canadian spruce makes the finest pulp in the world. This tribute was paid the well-known Canadian conifer recently by Prof. McCarthy of Syracuse University, N .Y., who has been conducting a working plan survey on the pulpwood limits of a leading pulp and paper organization of the Dominion.

Ontario has only 250,000,000 cords and Quebec 360,000,000 cords, according to Mr. G. C. Piche, chief of the forest service of the sister province. What is the present situation? Pulpwood is being exported to-day in its raw state across the border to the extent of over a million cords annually, whereas it should all be converted into the finished product at home, affording employment to a large industrial army and the investment of many millions of dollars of idle capital.

It is well known, of course, that pulpwood cut on the Crown lands of Ontario, Quebec and New Brunswick cannot be exported without being first converted into pulp or paper. This enactment is of a provincial character and was wisely placed on the statute books several years ago. There are, however, great areas of privately owned acres from which the wood is being taken and sent across the border. It would seem an opportune time for the Federal authorities to take this matter in hand ere Canadians waken up to the fact that their great natural heritage has suddenly vanished and, like Esau of old, they have sold their birthright for a mess of pottage

Why should such steps be taken? There is no more widely recognized authority than Dr. Howe, dean of the Faculty of Forestry, Toronto University, who has always taken a sane, conservative view of conditions. He declares that Canada's pulpwood, under the present heavy calls made upon it, cannot possibly last longer than 50 years. This may seem a long way to look ahead, but 50 years is a comparatively short time to look back over. Dr. Howe is strongly of the opinion that pulpwood, instead of becoming cheaper, will constantly increase in value as the distances, from which supplies come, recede and transportation problems become more acute.

Mr. Frank J. D. Barnjum of Annapolis Royal, N.S., is another national watchman, calling vigorously for the protection of our pulp, paper and timberlands. In a recent article he states: "Within two years there will be little, if any, wood going out of Canada, and I shall leave the reader to imagine what will happen when the annual supply of a million and a half cords is no longer available to the American mills." He asserts that Quebec has already been forced to notify its large limit-holders that they must reduce the cut on the Crown lands one-half, which will necessitate the purchasing by Canadian mills of all fee land wood, which has been going across the line. If they do not adopt this course, the Canadian mills will be prematurely "forced out of business."

Not only must greater conservation be exercised, but Mr. Barnjum declares that he is willing to stake his reputation on the points raised. As his predictions in the past in connection with timberlands have been generally correct his observations may well arouse thought and action.

Canadian pulpwood should all be turned into the finished product by Canadian mills. The only argument raised against such a restriction has been a plea put forth on behalf of the settler that he would be deprived of access to the market over the border. He would thus, it is said, be at the mercy of Canadian concerns and would not be able to realize the top notch price for his commodity. This contention is no longer valid owing to the fact that competition among the 100 Canadian pulp and paper mills is sufficiently persistent and keen to keep the wood up to the highest market value.

Canada should waken up to the fact that stumpage is a valuable asset. It is something that cannot be reproduced in this generation or the next, and holders of pulpwood lands are assured, by reason of diminishing supplies and an annually augmented demand of a reasonable figure for their product.

It has been charged that Canadians are lacking in national aggressiveness, public spirit and self preservation. Is it not therefore time that the export of pulpwood from privately-owned holdings should cease, and a Federal Act to this end passed at the forthcoming of Parliament?

The reserves of pulpwood in Canada are disappearing altogether too rapidly. If the great pulp and paper industry is to continue in its upbuild and expansion and make of Canada the greatest pulp and paper country in the world, it is urgent that further restrictive measures be adopted in order that our future may be assured.

The Ruthless Sacrifice of Conifers

The slaughter of many birds of brilliant plumage, which a few years ago was carried on extensively, aroused a protest from many organizations and humane societies. The only use to which these avian adornments were put, was in the decoration of women's millinery, in order that her ladyship might startle acquaintances by her glittering headgear. The result of the agitation was that the sacrifice of birds for purely ornamental purposes has practically become a thing of the past. The bonnets of women are just as attractive and variegated to-day without the great toll of life among woodland songsters.

The Woodlands Section of the Canadian Pulp & Paper Association recently discussed the ruthless cutting of millions of young trees at each Yuletide season, for no other purpose than that of embellishing the home or affording an entertainment, and it was felt that the practice should cease. Every year during the month of December young spruce, fir and balsam trees, some of them of twenty or thirty years' growth, are cut by thousands upon thousands and then sold from various stores, vacant lots and warehouses to all and sundry from 50c up. This pursuit may afford some revenue for those engaged in the s laughter, but what is the effect upon the plastic mind of youth? It sees only the vivid green of the branches, the garniture of the tree and its lights, candles and colors. No thought is ever given to the fact that this tree might in a few years contribute its quota of wealth and value to the industrial progress and upbuild of the people.

Tree-cutting at Christmas time is carried on in altogether too reckless a manner and the result does not justify the means. Thousands are cut and used only two or three days as Christmas pedestals, while others not disposed of are thrown into the scrap heap.

The extensive plunder which has been carried on every season in this line was forcibly brought to the attention of the Woodlands Section of the Pulp & Paper Association by Mr. George Carruthers, president of the Interlake Tissue Mills Co., Toronto, who takes a lively interest in the preservation and perpetuation of the timber resources of Canada. Considering the long years that it takes a spruce or fir tree to grow to commercial or merchantable proportions, there is no reason why millions of them should be slaughtered annually in their infancy by the ruthless hand of man, solely to gratify juvenile fancy or whims or to observe a time-honored tradition. Our timber resources are getting scarcer each year, and if conifers are destroyed on every hand, the coming generation will have little respect for the arboreous assets of the country. Familiarity will breed contempt, and instead of appreciating these resources and realizing what they mean to posterity and national development, future generations will evince little practical interest in reforestry and conservation.

Mr. Carruthers pointed this out with considerable vim and stated that children should become more acquainted with the life, character, use and cultivation of trees. To this end he stated that his company would be willing to offer a prize of several hundred dollars for the best essays.

It may be stated that there is an aesthetic side to this question, and that the hallowed associations and sentiments of Christmas, which have always been enshrined around a tree, should not be ruthlessly shattered. This may be true, but there can be artificial Christmas trees invented, which will serve equally as good a purpose and at the same time not rob the country of what will sooner or later be needed for the pulp, paper and wood products industries of Canada. There are excellent imitations of everything, and since a Christmas tree only serves its purpose for a brief period, why cannot artificial ones be created the same as artificial flowers; in fact so natural that the genuine and the imitation can scarcely be distinguished. These would answer the purpose admirably. The genius and ingenuity of man should evolve some means by which these articles might be of a collapsible nature so that they could be folded and placed in a small area ready for annual use. They would be fully as attractive, variegated and inviting and, at the same time, would give stability to the great wave of thrift, economy and conservation which is now claiming so large a share of the attention of the Canadian public.

Are the foregoing observations along the right line? If the reader thinks not, let him read the following news despatch from Kitchener, Ont.:—The Parks Commission of the city is taking steps to prosecute the parties guilty of chopping down young cedar trees to be used as Christmas trees. One of the woods, owned by the commission, has been literally stripped of young trees.

Great Canadian Lumber Gathering

Many vital problems will come up for consideration at the Thirteenth Annual Meeting of the Canadian Lumbermen's Association, which will be held in Ottawa on Wednesday and Thursday, January 12th and 13th.

Greetings have been sent to all the members of the association by the president and directors, wishing each one a bright and prosperous new year, coupled with the advice that all are working to this end.

There is little need of outlining the splendid work which has been done by the association since its organization thirteen years ago. To-day practically all the leading manufacturers and wholesalers in eastern Canada, and a number from the west, belong to this progressive national body. Its worth is being more appreciated as the years go by. The membership was never as large as it is at the present time and never was the business conducted on such a definite and aggressive basis. The C. L. A. is one of the trade institutions of which the Dominion may be proud. It has done much to elevate the status, influence, dignity and the prestige of the lumberman. It has at different times guarded his interests and watched his affairs with zealous care when legislation inimical to the industry was threatened in federal circles. If there had not been some purpose and plan, some ideals and service back of the Canadian Lumbermen's Association, it would not have lived to do the work that it has conducted in such an effective manner.

At the forthcoming gathering in Ottawa the attendance promises to be the largest and most representative in the history of the association. No lumberman should miss these sessions. He should come prepared to take part in the deliberations and add his wisdom and knowledge to that of the others during this period of readjustment, when the necessity of establishing national confidence and co-operation is both urgent and imperative.

Some Cycles in the Lumber Line

It is a peculiar world and the current of human nature often runs in the wrong direction. One cannot account for the various types of humanity, their freaks or foibles. In a recent issue of the "Canada Lumberman" there was published a cartoon, which impressively represented the familiar cycles of the lumber market. On one side was shown the lumber manufacturer and wholesaler with a surplus stock and an ability and willingness to meet the dealer's present needs. Does the dealer buy? By no means. He becomes deaf to all exhortations to place an order and will not listen to the plea of satisfactory service, prompt delivery, the value of the product, etc.

A turn comes in the wheel of fortune or the trend of trade, railways become congested, stocks of the wholesaler and manufacturer get low, building operations are lively, labor is scarce and the producer cannot fill his orders. He meets unforeseen difficulties and encounters fresh obstacles on all sides.

What then is the mood of the retailer? He comes rushing in, offering any figure for the material so long as he can get it. His needs are urgent, and his attitude persistent. He simply must have the stuff at any cost. Yet the consumer or dealer would not buy when there was a surplus stock. It is only when supplies are depleted that he becomes unduly importunate.

Why is this? It requires only a superficial observation to become convinced that everybody entering the market at once causes an inflation of values, and everybody dropping out causes a deflation? The best advice which can be tendered at the present time is for the retailer and consumer to avoid speculation, purchase what he requires and adopt a sane and normal policy. The sooner that the speculative and artificial element is removed from the lumber arena, the better and more satisfactory will be the state of affairs for all concerned.

Proper Care of Lumber in the Retail Yard

Practical Pointers for the Dealer Who Does Not Operate Planing Mill—How to Avoid Waste, Preserve Stock and Make Best Use of Available Space

By "Onlooker"

In treating on a subject like the above one can more clearly set forth his arguments if it is divided into two articles, one dealing with the retailer possessing a yard only and the other where he has a planing mill in connection and as a consequence becomes more allied to the manufacturers.

With a yard only the retailer has problems which are unknown to the man operating a mill as well.

With the coming of spring the attention of all is turned to the problems of the next summer and what to order to meet its demands. Many a silent consultation is held with the piles as they are and the vacant spaces to be filled, and it is to be expected that they too will appreciate the added interest for it is at this time of year that they must be seriously considered if the yard man is to get his future shipments piled to the best advantage.

Before advancing some salient points concerning the care of lumber in your yards, it might not be out of place to attempt to understand a little better the commodity which a few years ago was held in such little esteem, and is to-day in some districts.

To-day in South America mahogany is being used as firewood in order to clear the land. It is not an impossibility to find men of the older generation who can say that same fate was meted out to our own white pine.

Lumber is possibly the one most pliant offering of nature to man, for with it he can either mould other materials to the most attractive forms or work out his expressions of beauty in the wood itself.

Yet how many of us really and truly appreciate lumber for its true worth. A casual glance around the average yard will show us many hundreds of feet going to waste through lack of care or a few moments of our time.

Much more might be written on lumber and what it is but we will hasten on in an endeavor to show how it may be properly cared for as becomes an article of its value.

Task Worthy of Careful Attention.

Running a retail yard only is a task worthy of the most careful attention. Generally the lumber is piled in the open and consequently the roads and approaches will become blocked with snow or churned up into mud during the wet weather, and one of the first cares then is to have a yard properly drained and with good hard roads.

Here it might not be amiss to mention that we are assuming that the yard has been properly laid out so that the sizes used together may be piled in the same block and colse to one another.

First, in importance comes our road system which should be hard and carefully crowned and drained because time lost in becoming mired in the yard may add dollars to the demurrage account.

Then we must turn our attention to the foundations of our piles. This is a comparatively easy matter if we are making a new yard or piling section, as we can sink proper cement posts and put in the sleepers to allow of perfect ventilation, but if it is not new work, then we have to proceed carefully, and as each pile is lowered, we can put in foundation sufficient to keep the future pile at least a foot from the ground to allow a proper circulation of air and yet prevent a growth of fungus quicker than the pile is lowered. There is where a great deal of good lumber is wasted. Lack of space above the soil and the piling of new lumber on older stock for an indefinite period.

As regards piling of lumber, much might me said but really one knows that if he intends to move his piles quickly, it does not pay to invest good money in too careful piling, yet stock must not be allowed to twist and otherwise destroy itself through lack of proper care.

How to Pile the Thick Stock.

Assuming our piles are to be permanent and we have the foundations in, we will endeavor to suggest a few ways of piling 2 in. or thicker stock. Having no mill, we must of necessity have more piles, as we cannot expect to buy our stock wider and size to required widths as wanted. One of the best ways to pile joists, etc., is to commence the pile by laying the number of pieces flat, which will correspond with the width of one stood on edge, as if the pile is 2 x 8's, we lay four pieces flat on the outside of the pile—then go across the width of the pile, standing each piece on edge and a slight distance from its immediate neighbor. The other outside is treated as we commenced. Then our binder, which may be a piece of the same stock as we are piling.

Each course being as suggested the whole can either be covered or left open, which would be the proper course to pursue as the stock will be moved quite quickly.

Again we may pile, as is commonly done by laying one layer flat on our foundations, and the next layer allowed to overlap and cover the spaces between two planks.

So much for the piling of 2 in. stock, but first let us suggest that the first method is the better, as it allows a free circulation of air from top to bottom. The second is possibly much quicker but not as worthy for a permanent pile.

In piling rough inch lumber, a method similar to that used in piling 2 in. stock is used except each course is laid flat and has a little more care given to it as a rule, in that the front binders are allowed to project beyond the courses and also to slope forward as a pile advances, giving the two sides of a lumber alley a very narrowing and restricted appearance.

In hurriedly unloading cars, the course often adopted is to stack the lumber and sort and pile it later. Then a method, as described previously, of overlapping the joints, is quite frequently used.

Proper Sheds For Manufactured Lines.

Let us now turn to the sheds for manufactured stock and supplies.

They should be bright, well-ventilated and have a sufficient number of windows to allow plenty of light. Nothing destroys the surface of freshly-manufactured stock as lack of light and a presence of dirt.

There are various styles of sheds in use and one must choose his own style and build as best suits his requirements. Here, as in the yard, we must have dry paths and solid foundations, allowing sufficient space below the piles.

Then it is possibly better to have the piles smaller and not quite as high as a man's shoulders to permit of ease in shipping.

Many yards have their piles tagged and thus maintain a perpetual inventory of the stock on hand, but all these devices must be worked out by the man himself as he alone knows best what to do with his space. We can only suggest a few points to be remembered.

A shed for doors, flooring and supplies needs to be more closed and of much drier construction than one used for dressed lumber.

For doors a shed lined inside, and possessing few openings, thereby maintaining a temperature several degrees less than outside, is much the better type, especially so for veneered doors. This would prove a splendid type for flooring as well.

For supplies, the shed needs to be dry and, while not necessary, it might be lined as well. The interior arrangements of racks, etc., must rest with the owner as he can easily arrange to suit his stock and needs. Possibly a few hints would not be amiss.

Doors laid flat are more easily kept clean and bright than piles upright.

Mouldings should be carried in small quantities so as to preserve a certain flexibility of designs available, and always to have bright stock on hand. Small racks about three feet square are possibly the most accessible for small mouldings.

Lime, cement and roofing need care as only those handling same can suggest, and they would be only too willing to advise as to best methods of stocking same.

Again, let us suggest that less lumber properly handled will give more profit than more lumber poorly cared for can ever hope to return to the yard owner, and in the care of the lumber in the yards and sheds a man begins to reap a considerable proportion of his profit.

Mr. Chesbro Returns from Western Trip

R. G. Chesbro of Toronto and P. L. Canfield of Woodstock, recently returned from an extended visit to the Pacific Coast. Mr. Chesbro reports that practically all the mills, which were running, have closed down for the holiday period. There is very little demand for western material at the present time and the stock in most mill yards is low. Some plants, which have been manufacturing railway ties and other lines for export, have been quite busy, but generally things are in a quiet state. There is a strong feeling, however, that business will pick up in the course of a few weeks and that prices, which are now below the cost of production, will stiffen. Some concerns are holding on to all their stock, and when asked for quotations on certain lines, reply,—"Well, the figure which we want and that which you are willing to pay are, no doubt, very wide of the mark, and we prefer to wait until conditions become stabilized." Mr. Chesbro, however, found that there were no pessimists in the trade and all were taking the present situation good naturedly and were not worrying about the future, believing that conditions will right themselves sooner or later.

How Lumber Was Produced in the Late Fifties

Sawmill Equipment was Crude and Cumbersome But Natural Ingenuity of Operators Solved Many Perplexing Propositions—"Yankee Gang" and "Go Devil."

By F. H. Dobbin, Peterborough, Ont.

The Otonabee river, which drains the major part of the Midland district of Ontario, takes its rise from the outflow of waters drained into and collected from subsidiary streams up to the height-of-land that turns the drainage towards the Ottawa Valley. The surface of the country, essentially of that character that identifies the Laurentian chain of hills and valleys is displayed from north of Peterborough and directly through the best of country to the shores of Georgian Bay. Here was a large factor in the development of the industry of cutting lumber and timber in this district. Indeed the manufacture of such products may be said to have depended on a supply of power derived from the flow of the waters. The numerous lakes held and impounded the results of the melting snows of winter, and while suffered for years to run off at will, so much was retained that ample power was at hand.

The forest growth had been exuberant. Absolutely virgin limits met the prospector and wood ranger. Teeming with pine of large dimensions, accessable by water, operations were carried on in season for years with relentless regularity. It is true that many mills were steam driven. At certain sites the offal and debris had to be thrown into the river or disposed of by means of fire. Successively, all means were tried. The larger the mill, the nearer to any established community, the greater the necessity to be rid of the encumbrance. Of this need some facts may be written further on.

Application of Hydraulics to Power.

Sixty years ago the science of hydraulics in its application to power purposes waited for some other means of transmission than making use of it at the spot where it was generated, or developed, which expression is more to the purpose. This applied to all industries and was not confined to the running of sawmills. All shops, using power, were located on the banks of rivers. It may be repeated, that during the winter the forest lands held the snow, allowing of gradual melting and continuous contribution to the hundreds of brooks and creeks throughout the territory. As land was cleared in a measure the spring floods were accentuated by quick melting and rapid currents. But in the main there was ample power.

It was the day of the experienced millwright, skilled workers in wood, by whom all mills were constructed and equipped in almost every particular. Even the line shafts driving saws and cut-offs were of wood. Forebay, penstock, flume and even the tail-race were all plank and beam made. The building was often a sample of exceedingly rigid construction, mortised and pinned together to resist the rocking and up and down movement of the massive gates and saw frames. It was generally open to the weather, though roofed and with wide platforms to handle the sawn stick to advantage. In several of the very first built mills the massive timbers for the foundations were hewn by the broad axe with marvellous skill. Once erection had progressed far enough to get power on a saw then the logs were placed under tribute.

Power to drive the gangs, or upright saws, was developed by a sort of primitive mechanism combining the essentials of the now well known turbine by the body of water that impinged directly on the wheel. As many as four, or possibly five of these turbines were mounted, horizontally, on a hexagon or six-sided shaft of wood, turning on iron gudgeons mortised into the ends of the wooden shaft. A solid disc or wheel of iron, a form of fly-wheel, carried the crank pin for the pitman, which was in turn attached to the frame of the gate, as the construction that held the upright saw or saws was termed. As the saw or saws moved up and down the carriage holding the log was thrust forward against the saw by a tooth-and-ratchet movement worked from the gate. At the finish of the cut (determined by the length of the log) the carriage was returned by a separate device driven from a power shaft driving the edging and butting saws. In practice the first saw to welcome the incoming log was the slabber, so called because it removed the two outside portions of the log.

Introduction of the "Yankee Gang."

In several mills the slabber was arranged of two upright saws that would slide apart to confirm to the width of the log, or rather its diameter. Having been slabbed the log was passed to the "gang." Early mills were without such, for the time, refinements. It was an American idea and was familiarly known as the "Yankee Gang." Often it carried so many as twenty saws, spaced side by side. The log, now flattened on two sides was presented for cutting and on being driven against the saws was separated into as many boards as the diameter of the log would permit. A thirty-inch log would cut into fifteen or seventeen boards, with two slabs from the outside. Smaller logs were often placed on the carriage two at once and the full width of the bank of saws utilized. Lumber so cut was at once passed out on roller carriers and taken to the piling ground to season for shipment.

While the equipment in individual mills differed, because of capital invested in plant and continuance of operation, all mills of any pretension were equipped with slabbers, Yankee Gangs, stock gangs, and an occasional English gate, with the necessary saws for manufacture of laths, shingles, and in several mills dimension timbers. As the upright saws were placed about the centre of the mill floor and at least twenty-five to forty feet from the log entrance, it followed that about half of the lower floor of the mill, and down to the bottom of the tail race was taken up by the flumes. These also supplied the upright wheels that powered the circular saws. It was not until many years after the date of which we are writing that the Leffel turbine wheel came into use. Wheel box, covers, wheel shaft, buckets and bearings were all wooden and hand-made.

It was the palmy day of the expert millwright. These men were artists in wood-working. Often the wheel box, in which the buckets revolved, was made circular, inside. To do this sticks of timber, say 24 inches wide and as thick as could be procured, were cut into lengths of about six feet, and assembled and bolted together to the width of the same dimension, forming a square. On the face of the square the mechanic inscribed a circle of the diameter of the inside of the wheel box. Then with a hand-propelled augur the entire outline of the circle was bored, releasing the core of the circle. With tools, the inside of the circle was carefully trimmed and smoothed to exact proportion, and when placed on the plank foundation formed the wheel box. A circular hole cut in the planking allowed the water to escape. The cover was bolted and strapped on a hole being left for the wheel shaft to revolve in. On the upper end of the shaft was carried a spur wheel engaging the larger of a set of mitre gears, the shaft gear being in a proportion of about four to one of the horizontal gear wheel. On the drum shaft the drum was keyed, and of a possible diameter of four feet. While the water wheel revolved at a speed not excessive and much lower than of a turbine, the gears and drum gave the belt speed desired. All main belts to counter-shafts were driven off the drum, each way. Often as many as six wide belts were so served. There would be ample power, for the buckets of the wheel caught the energy on the face of the bucket of over 400 inches of water, with the push of the contents of the flume behind.

No Eight Hour Day Then

The twelve hour day prevailed. There was no such thing as overtime. When two shifts were worked the clock was evenly divided, from six to six, day and night. Whale oil, to be displaced by coal oil, (kerosene, it was termed) formed the illuminant, and not too much of that. Out in the mill yard a torch or flare was made use of in night operations. Viewed from a distance the whole thing looked weird and fantastic.

Reference has been made to what was termed the "English Gate." This devise really originated in Norway, but had been manufactured in England and offered to lumber mills producing in Canada. The bank of upright saws was arranged as in the Yankee gang. The upper ends of the saws were hung on a shaft that swung in bearings. The lower end of the saws arranged on a similar shaft. But the lower shaft, by means of an eccentric movement was moved back from the face of the cut in the log at the end of each stroke. This freed the saws when on the upward movement, allowing the log to be thrust forward, nearly doubling the "feed" and accelerating the rate of cutting. In addition, the kerf, or track of the saw could be reduced with a consequent saving in width of the saw track as tending to afford more lumber from the log. The saws were used thinner and given less "set." This gate, while rather complicated and liable to get out of order gave larger production that any other form of sawing mechanism. Circular saws, except in custom mills, had not come into use to any extent for the cutting of export lumber. The band mill was unknown and

yet to come. In steam driven mills the steam driven return gear was used to return the carriage carrying the log.

All along the river the disposal of the refuse was a matter of care and anxiety. It was plainly manifest that dumping into the stream would in the end bring its own retribution. Slabs would sink, or form obstructions that collected debris. Filled with sand and pebbles they created bars that obstructed the river. Where convenient slabs were piled along the river banks and on the slab piles lumber was piled. But to this there was a limit. Often the bank of the river was high and did not afford opportunity. The refuse burner had not been installed, but attempts were made to consume the debris on an open fire at some distance from the mill. This was hazardous and not satisfactory.

When "Go-Devil" Was Set to Work.

Then a contrivance was imported and set to work. It was familiarly named the "go-devil," having several fiendish characteristics. Two, at times three, sets of toothed rollers revolved face to face, confined in an upright wooden trough. The slab was hoisted in the air and thrust down the chute, to be caught between the rollers and ground into chips. These poured from the end of the chute in a stream and floated away on the current from the wheels into the tailrace. For a time this device served a purpose. Presently the inevitable came about. The water-soaked chips drifted to quiet spots and lodged. Each small bay and sheltered bend in the river caught its portion. In the swift current none lodged, only at places where driftwood came to rest and sand and silt collected. Mixed with sawdust the larger part sank to the bottom of the lake and river and, when decay set in, the effluvia, when stirred, was a nuisance.

On navigable sections of the river the side-wheel steamers stirred up to the very bottom and with painful results. Public opinion, backed by offended public noses, took action, and after two or three battles in the courts, the devise was ostracized and put out of business. But to-day, after an interval of fifty years, there are at Peterborough millions of tons of mill debris that is as it lay years ago. In the hot summer days these piles take fire and cause anxiety to an otherwise peacefully inclined fire service. For be it known, the most plebian of all duties for a fire brigade is that of drenching inflamed sawdust piles.

Lack of Raw Material Closes Historic Mill

Georgian Bay Lumber Company's Plant at Waubashene, Ont., Has Enjoyed Unique Record for Sixty Years—Now Idle for First Time in Its History

With the closing of the plant of the Georgian Bay Lumber Co., Limited, of Waubaushene, Ont., a historic, industrial enterprise passes out of commission. This organization marks a strong link between the present and the past and its cessation from active operation is but another evidence of the ever-changing character of the realm of the lumberman.

It is announced that the limits of the company are exhausted and that part of last season's cut was from the logs of other firms. There are few available limits to warrant further operation, and thus the Georgian Bay Lumber Co. is now numbered among the institutions of the past.

For many years it has employed about 400 to 500 men for several months and in the wintertime a large number of these went to the bush, where several hundred more found employment. Waubaushene has been an active trading centre of about 1,600 people, and that the mill has closed up will be seriously felt and even deplored. New settings are always appearing upon the stage of action. In no industry is this more pronounced than in connection with the manufacture of forest products. Farther and farther back the operator has to go for his logs. The ground which once supplied the thousands of logs, cannot be cropped again, and every two or three years, new camps have to be located and new methods resorted to in order to provide the mills with sufficient timber. All this is well known to the lumber industry and among the outstanding undertakings in this line is the Georgian Bay Lumber Co. which has been noted for many years as being one of the largest and best-equipped mills operating in that district. W. J. Sheppard is the veteran head of the company and one of the most widely-known and highly-esteemed lumbermen in the province.

The Inception of the Business.

It was in 1860 that Mr. Wm. Hall built the first mill at Waubaushene. Nine years later the mill was bought from Mr. Hall by the Georgian Bay Lumber Co., which has thus been in existence for over half a century. The plant was operated for some time under this name and later the title was changed to the Georgian Bay Consolidated Lumber Co. Their activities, included mills at Collingwood, Byng Inlet, Port Severn and Waubaushene. The latter company continued in operation from 1881 to 1893. after which the Georgian Bay Lumber Co. again came into existence.

The present sawmill is equipped with two gangs, a twin circular, two other circulars, one single-cutting band saw, one band resaw, two edgers, two trimmers, lath and picket machines, practically all the equipment having been furnished by the Wm. Hamilton Co., Peterboro. For many years one of the circular saws was used for cutting bill timber and the other for manufacturing small logs in connection with the band resawing which is operated behind it. The mill has a capacity of 200,000 feet a day and represents an investment of half a million dollars. The plant has specialized in red and white pine, the product being sold on the domestic market as well as across the border and in Great Britain. Previous to the war. the upper grades were disposed of, principally in England, and the intermediate and lower grades in Canada and the United States.

The company had extensive limits in Algoma, Muskoka and on the Dokis Indian Reserve, and in their woods operation for a long time they cut about 25,000,000 feet annually.

The sawmill of the company is constructed of wood, covered with iron, and the boiler-house and engine are separated from the mill by a brick wall. The mill and yards have always been kept in a model manner, and it has always been the policy of the officers of the company to see that everything around the plant was scrupulously clean. The yards can accommodate about 25,000,000 feet and are as level as a billiard table, with ample tramways and eight railway sidings.

Veteran Figure in Lumber Line.

W. J. Sheppard, president of the company, is now in his 69th year. He was born on a farm at Keswick, Lake Simcoe, his parents having come to Canada from the Eastern States and settled in that district.

General view of Georgian Bay Lumber Co.'s plant at Waubashene, Ont.

The position which he occupies to-day in the lumber arena has been won by pluck, industry and perseverance, as from a very early age he had to make his own way in the world. This he did by hard work and keeping everlastingly at it. He began his business experience in connection with the Georgian Bay Lumber Co., where he held the position of storekeeper, in 1870. This was during the summer months, and in the winter he was engaged in woods operation and latterly in measuring logs. His first position as a scaler was at the camp on the Coldwater Road between Orillia and Waubaushene. Subsequently he moved to Gravenhurst, having charge of the company's bush work and returning later to the Coldwater camp.

Mr. Sheppard is regarded as one of the most successful lumbermen in the Georgian Bay district and his position has been won worthily. Of a quiet, even retiring disposition, he has always devoted close attention to the details of his business. For many years he was

a director of the Traders' Bank and, at the time this institution was taken over by the Royal Bank of Canada, he was made a director of the latter institution. He was associated with the late John R. Barber, the Paper King of Canada, in the erection of the first ground wood plant of the Spanish Pulp and Paper Mills at Espanola, Ont., and also in the installation of the first machines for the making of newsprint at this point. Mr. Sheppard never lost his interest in pulp and paper enterprises and was for a long period a director of the Toronto Paper Mfg. Co. He is also vice-president of the famous McIntyre mine at Porcupine, a director of the Famous Players (Canadian) Corporation, who are erecting a chain of attractive theatres from Vancouver to Halifax in all the principal cities. He was one of the first interested in the Loew theatre in Toronto and also the Regent and is a director of the new Pantages, the largest amusement place of its kind in the

View of Georgian Bay Lumber Co's. mill showing elevated tram

British Empire, seating 3,600 persons. He was one of the promoters and founders of the Northern Navigation Co.; and has been interested heavily in many other successful financial and industrial ventures. Lumber, log-driving and improvement associations in the Georgian Bay district have always received his warmest support.

Unique Record and Model Firm.

As already stated. Mr. Sheppard has been prominently associated with the lumber industry for half a century and recently received from Mrs. A. M. Dodge of New York city a handsome, gold encased fountain pen with the inscription, "W. J. Sheppard, 1870-1920... The late Hon. W. E. Dodge of New York was the first president of the Georgian Bay Lumber Co., and was succeeded by his son, A. M. Dodge, in 1882. The latter restained the position until his death in 1907, when Mr. Sheppard became head of the company. Marshall Dodge of New York, a grandson of the original president, is vice-president of the company to-day.

Mr. Sheppard has five sons and one daughter. The sons are C. H. Sheppard, superintendent of the plant at Waubaushene; Lee and Herbert Sheppard, who. after returning from overseas duty during the war, formed the Sheppard and Gill Lumber Co., 12 Drayton St., Toronto; Stanley Sheppard, who is associated with T. A. Richardson & Co., stock brokers, Toronto, and W. J. Sheppard, Jr., who is engaged in the flour milling business at Coldwater, Ont. His daughter is Mrs. Fred Grey. of Coldwater, whose husband died some months ago.

The Georgian Bay Lumber Co. has enjoyed an unbroken and, in many respects, a unique record among the lumber enterprises of Ontario. It built comfortable houses for its employees at Waubaushene and never charged the occupants any rent. It established schools and churches for the benefit of the community. Never in half a century did the company have a strike, or close down owing to lack of help or a supply of logs, although Mr. Sheppard admits that once the mill came perilously near this point. It was when they lost a large tow coming from French River and there was only two hours' supply of logs in the pond. Many of the employees have been with the company for the past forty years, and it seems a sad comment on the industrial activities and development of the day that this modernly equipped and ably conducted plant should fall into disuse solely through lack of raw material with which to operate; and that Waubaushene, a hitherto prosperous community, where the big mill, which has cut as much as thirty million feet of lumber in one season, has been the chief factor, should become like "The Deserted Village" described by Oliver Goldsmith, the Irish poet, in his beautiful poem published a century and a half ago.

Should Clear Bush Lots of the North

Rev. Alfred Fitzpatrick, principal of the "Frontier College," Toronto, writes: "One means of solving the problem of unemployment is for the Government of Canada to begin the long overdue task of preparing its bush lands for settlement in the clay belts of the north. Owing to summer frosts, farming of northern clay lands has largely been a waste of time and money. Only by clearing whole areas will this barrier to settlement ever be overcome. At least 65 per cent. of each lot, in carefully selected townships, should be cleaned by means of large gangs living in community camps. Work could thus be provided, particularly in the fall and winter months, as well as during special periods of unemployment. This policy of extended land-clearing, should not be simply an emergency measure, but should engage the attention of the federal or local governments the whole year round. Should any of the workers at these community camps wish to remain on some of the cleared lots, they could be sold to them on easy terms. For the next 20, 30, yes, and for 60 years, land-clearing in preparation for future settlement, should be an urgent and essential department of every government in the Dominion.

"The big industrial plants of the Dominion, as well as the governments, can assist in this great undertaking. Every large industry should apply for a whole township or more in the bush lands. Instead of 'laying off' men when a pinch comes, they could establish large land-clearing camps and homestead by proxy. The land-clearing department would undoubtedly prove remunerative. Lumber, ties and pulpwood will always find a ready market.

"Let thousands of individual farmers apply for bush lots of 160 acres each in the clay lands. At convenient centres the governments should provide comfortable and attractive community camps. Farm hands should be hired by the year. Instead of being turned adrift when the busy season is over, they could go north for a short period to help in clearing the bush lots of their employers."

Construction Contracts Show Falling Off

Construction contracts awarded in all the cities, towns, villages and rural districts throughout Canada during November, according to figures compiled by MacLean Daily Reports, Limited, totalled $15,399,200, compared with $18,169,500 in October and $16,995,200 in November, 1919. The total for the eleven months of 1920 is $246,859,000, compared with $181,131,900 during the corresponding months of 1919, and $94,652,400 during 1918, being an increase of 36.3 per cent. over 1919 and 161.1 per cent. over 1918.

Among the most important contracts awarded during this month are the following: Regina, theatre, $250,000, for Famous Players Canadian Corporation, Ltd.; Winnipeg, deaf and dumb institute, $621,000, for province of Manitoba; Vancouver, seawall and terminal, $350,000, for Canadian National Railway; Vancouver, drydock, $3,500,000, for Dominion Government; Maple Ridge, B.C., logging railway, $350,000, for Miami Corporation of Chicago; London, Ont., sewers, $300,000; Hamilton, glass factory, $300,000, for Canadian Libbey-Owens Sheet Glass Co., Ltd.; Toronto, restaurant and office building, $400,000, for Childs Co., Ltd.; province of New Brunswick, road construction, $248,000; Three Rivers, Quebec, pulp mill, $1,500,000.

Duty Still Collected on Maple Lumber

The National Wholesale Lumber Dealers' Association of New York city, in a recent bulletin regarding the duty on maple lumber shipped from Canada to the United States, says:—

Members will recall that in January of this year we issued a bulletin covering a ruling by the United States Treasury Department imposing a duty of 10 per cent. ad valorem on maple lumber imported to the United States from Canada. Paragraph 169 of the Tariff Act of 1913 imposes a 10 per cent. duty on "Cabinet Woods" and the Treasury Department has classified maple as a cabinet wood, except when manufactured into flooring or when invoiced at $10.00 per thousand. The Treasury Department ruled that the scarcity of other cabinet woods justifies the classification of maple as a "Cabinet Wood."

Since that time some protests have been filed and the Board of General Appraisers by ruling No. 43973 on protest No. 933672, etc., of W. H. Allison & Co., and others, has ruled that on the record presented, maple lumber was held free of duty.

The Treasury Department will probably appeal from this ruling which puts maple in the free class, and in the meantime the Department will levy a duty on maple shipments coming into the United States from Canada, taking the position that if maple is finally declared free, claims must be filed by protestants for duties to be refunded.

We are also informed that the Treasury Department has classified beech as a "Cabinet Wood" and will levy a duty on shipments of beech from Canada to the United States on the same basis as duties are collected on maple. The Treasury Department has sixty days from November 10th within which to appeal.

Business—How the Present and Future Look

*By H. M. Lee, Lansing, Mich.

"How's Business" is a phrase that just now is on everybody's tongue and nine times out of ten the man who asks it seems to desire a pessimistic answer.

Quite a number of people right now seem to have the idea that everything is going to the dogs and there is no sense in trying to stop it.

Now let's look the facts as they are, square in the face for the moment, and see whether the present condition is really abnormal. That is to say, abnormal in the sense of being unheard of or of never having happened before.

Take your own business, for example, chart its progress and you will find that the chart while showing a marked upward tendency is nevertheless interspersed with peaks and valleys, each valley a little less deep than the one before and each peak a little higher than the peaks that went before. Draw a line through the middle of this and you get an average progress—and after all is said and done, isn't the average progress over a period of years the thing that determines success or the lack of success?

Everybody knows that we, for some time past, have been in a grand and glorious "seller's market." A lot of people realized that it was too good to be true and even in the midst of it began figuring on what they would do when they had to start in earning their living again.

It was perfectly true for a while that business men did not seem to have the time to save money or even to save time. They were too busy filling orders or trying to boost production to keep up with what they seemed to think was an unending stream of orders.

Human actions and reactions can very safely be likened to the swing of a pendulum of a clock. Under stress of excitement and pressure of unusual extravagance and absolutely careless buying to penuriousness, or the theory of doing without things.

In normal times, human beings in the mass maintain a little better sense of proportion and their expenditures are neither flagrantly careless nor senselessly limited.

The Question is What to Do.

There is an awful lot of talk right now about who is to blame. This may be important for historians to determine, but it doesn't get us anywhere in laying plans for 1921 or for the balance of 1920 either.

It seems to me to be a fine time to remember that it is no test of business skill to ride to success on a wave of prosperity and reckless buying.

You can remember and your father will remember better than you, just how hard it was to achieve success—the long weary hours of work and concentration and worry it took to turn the corner. What infinite number of problems had to be whipped before the plant got to be a big factor in the industry.

Success is a sturdy plant—it takes some time to grow to maturity, yet during the last three or four years we have seen plants spring up from nothing to 100 acres more or less, with thousands of men employed—success made while you wait with an eager public ready to buy on the cost plus basis.

But, fundamentally, that was never a serious or permanent condition.

However foolish they may act at times, the public by and large is very much given to looking on both sides of their dollar before they spend it and right now is the time for manufacturers and distributors to get their feet back on the ground and realize that it takes just as much work in 1920 to make success as it did in 1870 and that the good old rules of supply and demand, of value in its relation to price, of quality in the article, of honesty in manufacture, of even dealing—are just as important to-day as they ever were.

There is nothing new or startling about the present situation in business.

There are always those business men who wait to feel the effects of a condition before taking any steps to see it through—and a considerable number of them go to make up those interesting statistics compiled by Dun's and Bradstreets on "Business Failures."

Others muddle through and come out wiser and a little older. There is another class, however, who take advantage of the profitable years to set their house in order for closer figuring before they really have to do it and they are the ones who are never as hard hit by so-called "curtailment" as the fellow who can't get used to the fact that Uncle Sam isn't taking everything he can make at cost plus.

*President Duplex Truck Company.

Business to-day, whether manufacturing or selling, requires a very high type of business skill, foresight and courage, and times like these test the quality of management back of every company, be it large or small.

Every company, too, will come through according to the quality of its management—the ability of its men.

Many to whom apparent "Success" came too easily have still to learn that business is largely compounded of work and those who have already learned that lesson are realizing that the present conditions are just another of those things that enable a man or a business to show whether or not it has the right to endure.

The fact is that probably every man in business was trying to get his own business out of that reckless "buy as much as you can get" attitude of mind and get his own personnel back to a safe and sane realization of the good, old business fundamentals, while secretly hoping that his public would continue as they were for a long time to come.

These Are Testing Times in Business

But everybody was figuring the same way—everybody wanted to get back to earth, not merely you or we, but every company and every individual in the United States was looking for the time when he could come down out of the clouds and get his feet back on the ground and start again to lay by a little surplus.

You say there are going to be failures or that there are failures.

Of course there are. There never was a year in American business that there were not failures and there never will be a year when there won't be failures.

It is absolutely true that careless buying—and by that I mean the unwillingness to scrutinize values carefully or to buy on a sensible basis—never yet made permanent prosperity for any manufacturer.

It never made for security because it is always too liable to quick change.

Right now the situation shows many signs of clearing up. You see it all over.

You even see people to-day who are not at all ashamed to admit that they own a savings bank account even though they haven't got automobiles.

Six or eight months or a year those same men would have probably explained to you that they had not gotten their cars yet because they couldn't get delivery. To-day they are probably glad that they didn't get them and glad that they have savings accounts.

That hurts business, some one may say.

No, it doesn't hurt business. It makes for good business, because we need to remember that we are living in a practical world and that the surest precursor of continuous hard times is an era of continued extravagance.

Fictitious values in commodities tend to make fictitious values in dollars. Both are bad, and right now we are passing through that period where people are readjusting themselves, reconstructing, if you will, their own ideas of what is lasting and permanent—casting off the superfluous and getting ready to put their shoulders again to the wheel of productivity in an orderly, commonsense, practical, business-like way.

It is no time for impatience, it is the time for cleaning house—for casting out the needless expenses—for reducing wasteful overhead—for eliminating the unnecessary and for putting business back on the bed-rock of common sense methods.

If the era of get rich quick success and haphazard living had continued in force very long, the rising generation of Americans would have been a breed of spenders, a breed of wasters and a breed of men who expected success to come to them rather than men who expected to have to go out and make it as their fathers, grandfathers and great-grandfathers had to.

The frontiers of success have not been shortened along with the frontiers of our geographical borders and it takes just as much work to-day to reach those frontiers and develop them into a permanent and durable structure of success as it did fifty years ago, but we almost forgot that.

To every business man who can look his business in the face and realize that it renders a real service to the consumer as well as to himself—that his product is fit to survive—made by men and women who put into it the best of which they are capable—and that a wider use of his product will tend to raise the standards of business and of living—that man can rest quite secure in the knowledge that the future for him is bright.

New Position for Mr. Laughlin

Mr. H. S. Laughlin
Chatham, N. B.

H. S. Laughlin, who was chief forester for the J. B. Snowball Lumber Co., Chatham, N.B., is now with the Eastern Pulpwood Co., who operate on the St. Croix River in New Brunswick and Maine.

During the past summer he had two attacks of appendicitis while engaged in his work, and his doctor advised an operation. Accordingly he resigned from the Snowball Co., intending later to join the Dominion Forest Service. Mr. Laughlin went to spend a few days with his father, who is also a doctor, and was strongly advised against an operation. On the other hand, he was told to take a couple of months' rest, which he did, and was preparing to go to Saskatchewan in the Dominion Service, when he received an interesting proposition from his present employers, the Eastern Pulpwood Co., who own most of the land they operate. Mr. Laughlin is surveying and making plans of all their holdings. He reports that the winter season has been very backward and until recently there was no frost in the ground and the swamps and small brooks were all open. Eight inches of snow had fallen and this was keeping the swamps from freezing during any cold weather. At the time of his writing—the middle of December—rain was badly needed, followed by good, snappy cold days to make logging conditions ideal.

The Passing of Mr. William Power

The death of Mr. William Power, head of the firm of W. & J. Sharples, Limited, Quebec. P.Q., occurred after a short illness on December 12th. Mr. Power was one of the outstanding figures in the timber trade of Quebec, and his association with the industry, extending over sixty years, was marked by uprightness, high ideals and splendid service. His passing removes one who was in every way a tower and bulwark to the cause which he espoused so early in his career and followed with ability, devotion and faithfulness to the end. It was only a few days before his death that he completed some important business transactions and showed his appreciation of those who had served the firm long and efficiently, by forming a new company known as W. & J. Sharples, Limited, to take over the old business of W. & J. Sharples, Regd. Another company was also organized known as the Power Lumber Co., Limited, for the purpose of purchasing and operating a number of mills, in which the members of the Power family are interested, and the head office of which was to be at St. Pacome.

The late Mr. Power is survived by his widow, four sons and two daughters. The sons are W. Gerard Power of St. Pacome, former president of the Canadian Lumbermen's Association; Joseph Power, Chas. G. Power, M.P., and Frank Power, of Quebec. The daughters are Mrs. M. Barclay of Montreal, and Mrs. F. A. Mosely of Montreal.

The late Mr. Power was a warm worker and enthusiastic endorser of all organizations in the lumber line. He was for years a director of the Canadian Lumbermen's Association, president the Quebec Limit Holders' Association, the Canadian Forestry Association, and many other concerns. Mr. Power was also president of the River Ouelle Pulp & Lumber Co., the Lafontaine Lumber Co., W. & J. Sharples, Regd., and others.

Born at Sillery in 1849, he was a son of the late Wm. Power, one of the managers of W. & J. Sharples. The subject of this reference entered the service of the Sharples firm in 1860 and enjoyed a long and remarkable successful business career, holding various positions of trust until 1906 when he became a partner in the firm, associated with the late Hon. John Sharples and the late R. Harcourt Smith. In 1913 his two partners having died, he became sole proprietor of the business.

A firm believer in the future of the province of Quebec, Mr. Power had invested extensively in timber lands and limits. He was a Liberal in politics and a close friend of the late Sir Wilfrid Laurier. He was elected to the House of Commons for Quebec West in 1902 and was re-elected in 1904. In 1908 he was defeated by Sir William Price, but was again elected in 1911. In 1917 his growing business interests claimed all his attention and he refused to stand for election.

The late Mr. Power devoted considerable time to the encouragement of agriculture. He owned and maintained a large modern farm at St. Pacome, Kamouraska county, and his fine herd of Canadian cattle captured many prizes at various exhibitions throughout the province.

In religion Mr. Power was a devout Catholic. He was a former president and councillor of the Quebec Board of Trade, for many years a councillor of the municipality of Sillery, a member of the special committee of the tercentenary celebration, a trustee of the Canadian Patriotic Fund.

Speaking of his death, a Quebec paper pays the late Mr. Power the following tribute:—"His devout faith and unfailing benevolence are an assurance in which those whom he left behind can find certain consolation. From its inception as a boy of eleven until the present time the record of the man is characteristic of the best type of Canadian enterprise and perseverance. It should serve as a model for emulation by the rising generation and example of success for its encouragement."

Organization—Production—Distribution

W. M. Ritter, of the W. M. Ritter Lumber Co., Columbus, Ohio, has written a most interesting volume on the "Lumber Business—Organization, Production and Distribution," and the "Canada Lumberman" believes that it is one which will be read with much interest.

Mr. Ritter is a gentleman who has gained his experience and outlook on life in the hard school of struggle, insight, trial and often bitter disappointment. Naturally he has not drawn any fancy word-pictures or sketched any beautiful dreams, but about all his observations there is the flavor of common sense, calm judgment and sane vision. His code of ethics, as worked out in the successful operation of his own company, is one that will be read with no little appreciation and commendation.

It may be stated, in passing, that the little book was written by Mr. Ritter solely for his own employees, with no thought of it being circulated outside of his own organization. Among other things he says:—

"The policy of this company should be a reflection of its individuality which marks it as different from other companies.

"Loyalty to its policy is necessary, for its only through its employees that it is known to the public—if the employee or representative is not true to the ideals of the company, the company is misunderstood and misjudged by the public.

"It is the purpose of this company to conduct its business upon the principle of service.

"Its aim is to render efficient service.

"Efficiency is 'doing the right thing in the right way, at the right time, all the time.'

"This policy contemplates that everyone with whom we have business relations—employees and customers—shall have the maximum of satisfaction, for this is good business.

"Do not be impatient of delay. Sound, steady, efficient service inspires confidence. Good service is the only thing for which one can long continue to receive a reward.

"This policy is not entirely altruistic, for he receives most who gives most. The more perfect the service rendered by one the greater and more certain will be the reward flowing back to him.

"The patronage of customers naturally gravitates toward the merchant who serves his customers best; the service of the employee naturally goes to the employer who serves his employees best; the reward from the employer to the employee is in greatest measure received by the employee who serves his employer best.

"Co-operation not competition finds its place in this policy. If you deal with a person in the spirit of competition, you seek to get the most for the least; by applying the spirit of co-operation, you seek to find the need, and then to render the most perfect service in filling the need.

"This policy recognizes and insists that the interest of the seller and the buyer, of the employer and the employee, are identical, and so intimately united and inter-related that nothing can ultimately be beneficial to the one, which is injurious to the other.

"The difficulty of endeavoring to formulate policies in a "Code of Principles" is that which is inherent always in rule-making. No one can live by rules alone. The state of mind in which the rules are followed, the mental attitude toward the rules, is as important as the rules themselves."

The logging operations in Port Arthur district for the years 1919-20, were as follows, according to the report of the Acting Crown Timber Agent for that district: Pine and spruce, 3,827,723 ft. b.m.. There was cut and made 892,084 railway ties. The pulpwood taken out amounted to 153,802 cords, and there was cut and taken for manufacture 173,599 pieces of mixed saw logs; the timber in the production of these was balsam, spruce, balm of gilead, and poplar; 13,810 cedar posts, eight feet long, were also cut.

Lumber Firm Specializes in Domestic Woods

Manufacturers' Lumber Company, of Stratford, Operated by Three Brothers, Has Greatly Developed the Consumption of Canadian Hardwoods

The use of domestic hardwoods in the manufacture of furniture and other household lines has from time to time been endorsed and encouraged by the "Canada Lumberman." Articles urging greater appreciation of home forest products have always been read with interest.

Among the organizations, who have specialized in the line of supplying factories with the various kinds of wood that are grown in western Ontario is the Manufacturers' Lumber Co., Limited, of Stratford, which is composed of three brothers—J. A. McFadgen, president; G. A. McFadgen, vice-president, and C. A. McFadgen, director. Four brothers constituted the company until October, 1918, when death claimed W. A. McFadgen, of Huntsville, Ont., who, in a buying capacity, had worked up a strong connection in that district and more particularly in the purchase of stocks of birch. The three McFadgen brothers have built up a large business with the furniture factories, implement factories and interior trim establishments of western Ontario, and recently purchased the cooperage plant located in Stratford belonging to Merritt & Co. of Chatham. This plant turns out large quantities of staves and hoops, and in connection there is a sawmill with circular saw, along with a special top-saw for cutting up extra heavy elm logs. Some of the trees secured in the vicinity turn out as much as 4,500 feet of lumber. With the two saws it is possible to cut timber up to 60 inches in diameter.

Some three years ago the Manufacturers' Lumber Co. purchased a mill at Clinton and removed the equipment to Shakespeare, where about a million and a half feet have been cut in the two seasons. The Manufacturers' Lumber Co. bought a bush of 133 acres near this historic hamlet and placed the mill right in the midst of the growth. The mill is a two-storey one with a 100 h.p. engine and boiler, running a circular saw, edger, butting saw and slab saw, and with a capacity of about 15,000 feet a day. At this point the company have also taken out telephone poles, cedar posts, vineyard stakes and railway ties.

How the Business Was Started.

J. A. McFadgen, the founder of the company, taught school for several years previous to embarking in the lumber line. It was while principal of a public school in Stratford that he came in contact with the late Mr George McLagan. who was then a member of the Board of Education. A close friendship was formed between Mr. McFadgen and Mr. McLagan. In 1903 when this progressive furniture company, which used principally domestic woods, ran short of stock, buyers were sent out in all directions, in order that as large a supply as possible might be secured. Mr. McFadgen undertook to do some exploring for the company. Born and brought up in Wellington County, he had a fairly good idea of trees, their properties, uses, growth, etc. He then learned the grading of lumber by spending every spare hour of his time down at the McLagan factory watching the break-out saw.

Two years after Mr. McFadgen started the Manufacturers' Lumber Co., he was joined by his brother, the late W. A. McFadgen, and in 1907 another brother, G. A., came into the company, and was followed three years later by C. A. The latter two now do the buying, grading and shipping, while J. A. gives his personal attention to the executive and selling ends, and also supervises a portion of the buying.

Why the Name Was Selected.

When asked how the name "Manufacturers' Lumber Co." happened to be selected, Mr. McFadgen said it was because their special business was to buy from the manufacturer and sell direct to the factories. There was thus only the one profit and the one handling. By reason of this, better service could be given and a more thorough and intimate connection developed. The Manufacturers' Lumber Co. do not sell to the retail lumbermen at all but confine their business exclusively to the establishments already referred to.

A number of railway ties are taken out each year and lumber contracts are made for the season with both stationary and portable mill-owners. The quantities contracted for, range from 100,000 feet up to a million or two, but for the most part stocks are not larger than 200,000 or 300,000 feet. They are generally purchased on a log run basis and graded by the Manufacturers' Company. The principal woods handled are maple, birch, soft elm, basswood, ash and also a quantity of spruce, pine, poplar or balm, for crating.

In connection with the mill at Shakespeare and also the plant which the Manufacturers' Lumber Co. recently acquired in Stratford, an eight-ton truck is used which was specially built for their purpose. Its operation has been found very economical on long hauls and the roads around Stratford are in pretty fair condition.

The major portion of the business of the Manufacturers' Lumber Co. is, of course, the wholesale end and being established for nearly a score of years, the organization has done its part to cultivate a wider acquaintance with and a more thorough appreciation of Canadian hardwoods.

An Ardent Curler and Golfer.

J. A. McFadgen, president of the company, has few hobbies outside of business. In his younger days, he was an ardent lacrosse player and bicycle rider. To-day he finds relaxation in golf, motoring and curling. For years he has belonged to the Stratford Curling Club and has skipped many a rink to victory. He leaves with the Canadian curlers at the end of this month for Scotland, where he will spend

J. A. McFadgen, President
Stratford, Ont.

G. A. McFadgen, Vice-President
Stratford, Ont.

C. A. McFadgen, Director
Stratford, Ont.

January and February. The party will consist of thirty-two devotees of the stane and besom, ten of whom are from Ontario. They expect to trim a number of the Scotch quartettes at their favorite game.

This will be Mr. McFadgen's first visit to the land of cakes and heather. He is looking forward to the outing with considerable pleasure. He declares that when he returns there will still be plenty of time to take up the purchase of lumber stocks for next season, in as much as few sales are being made at the present time, although a large number of persons are negotiating to place their cut for 1921. A year ago at this particular period and during the first few months of 1920 it was a case of buyers chasing the producers, but just now conditions are reversed and the market has become a buyer's one instead of seller's.

Mr. Brankley Nominated for Advisory Board

A meeting of the New Brunswick Lumbermen's Association was held recently in Newcastle, N.B., when matters of general interest to the lumbermen were informally discussed but no particular decision was arrived at.

The immediate object of the meeting was to nominate a representative on the Forest Advisory Commission. D. J. Buckley, a prominent lumberman of Newcastle, Northumberland County. was on the Advisory Commission for several years and was the licensees' representative on the Board. It became necessary to appoint a successor in accordance with the terms of the Forest Act passed in 1918. This measure provided for an Advisory Board or Commission

J. W. Brankley Chatham, N. B.

to assist the Minister of Lands and Mines by way of suggestion or advice to the administration of his department, particularly as relating to Crown lands.

A part of the section of the Act read as follows:—

> "A Provincial Forestry Advisory Commission is hereby created, to consist of the Minister of Lands and Mines as chairman, the Deputy Minister of Lands and Mines, the Provincial Forester as hereinafter described, one prominent lumberman or licensee appointed by and representing the licensees, and one other lumberman or forester who must be associated with the ownership or management of the Crown granted forest lands, to be appointed by the minister, and to act as an advisory board. Should the licensees fail to nominate and appoint a prominent lumberman or licensee as provided for in this section, then the minister shall make such appointment."

J. W. Brankley, general manager of the Miramichi Lumber Co., Chatham, N. B., was nominated to fill the vacancy and the Government will send out a blank ballot to all licensees, in which they are to insert the name of their selection and return. The result of the ballot practically fixes the appointment, and there is no doubt of Mr. Brankley's elevation to the post.

Favorably known to the industry throughout the Maritime provinces, Mr. Brankley is an active worker in the interests of the Canadian Lumbermen's Association. He is not only general manager of the Miramichi Lumber Co. but also the Dalhousie Lumber Co. Both these organizations are subsidiary ones of the International Paper Co., New York, and between the two control from 800 to 1,000 square miles of Crown timber limits in New Brunswick.

Better Service Will Retain Trade

By W. A. Lynn

In discussing the evil of the "lumber catalog" in relation to dealers in the rural districts, many remedies have been suggested both by the individual merchant and the Retailers' Association. Most of these arguments, however, deal solely with the price of the lumber, explaining how the retail dealer can quote equally as low prices as the catalog houses in the larger cities.

Recently in correspondence with a builder living in a small town in southern Ontario, the "Canada Lumberman" received an interesting illustration of one reason why local lumber dealers sometimes lose valuable patronage of rural builders. The following is part of the letter: "I decided to install hardwood floors in my home as part of my redecorating programme and called upon our local lumber merchant to select some hardwood material and place my order with him. The quality which I desired was not in stock at the time, but the dealer assured me of securing the particular stock of flooring I desired in a few days. This was perfectly satisfactory to me. A week went by and calling again I learned to my disgust, that the flooring had been ordered but had been sold and only a few feet of it remained. (It would not have cost a cent to use the phone, announcing the arrival of the flooring). A few days later I happened to notice a mail order catalog while calling on a friend. Glancing through it, I found the flooring I desired and ordered it. Three days later the flooring arrived as was advertised, and in perfect condition."

This is the exact theory why people send to the larger cities for materials of every kind, not because they cannot be procured at home (for in most cases they can) but because they are sure of getting "prompt service." A farmer was once heard to say, "I am always afraid of them fellows in town; they trust too much to luck."

There is only one remedy for this evil and it is a sure cure—"better service." Practically every dealer one converses with about the "lumber catalog" talks price, forgetting that the few cents in quotations that might separate them from the mailorder people is not the cause of their lost patronage, but because sometime or other they have given indifferent service and the news has spread. In the instance quoted above the difference in the price quotations was only a few cents upon the whole invoice.

In summing up the foregoing instance, it appears that good service should be the paramount aim of the rural and town lumber merchants, eliminating all inconsistency by affording all customers a little more attention than they bargained for. Customers, as a rule, do not object to a few cents difference in price if they can secure the goods when wanted and incidentally when promised.

Ritter Company Shuts Down All Mills

The indication of the trend of hardwood conditions across the border and the outlook for 1921 is reflected in some degree by the action of the W. M. Ritter Lumber Co. of Columbus, Ohio, the largest producers of hardwood lumber in the world. This concern. which controls thirteen band mills, six planing mills and eleven flooring units, with an annual capacity of 130,000,000 feet, has closed down all its saw and planing mills for an indefinite period. The firm specializes in plain and quartered oak, poplar, chestnut, cypress, birch, beech, basswood and yellow pine.

Only a small percentage of the hardwood mills in the South are running to-day. and concerning the stock of the W. M. Ritter Co., an officer of that organization recently said:—"While our stocks on hand are only approximately normal and we are aware of the belief on the part of a large number of business people that there will be a steadily improved demand for hardwood lumber after the first of the year, and the opinion of some that one need not be surprised to see, a renewal of auction market conditions, which was in evidence last year (and which the present policy of buyers invites or certainly tends to produce) we think that the present situation in respect to the cost of production and sales prices is such that it is the part of wisdom to suspend production until the market sufficiently improves to justify resumption."

Lumber Not To Blame For This

A readjustment of mortgage rates, regarded by most loan and trust companies as considerably overdue, has been in progress in Toronto during the last few weeks. Applicants for renewals or new loans on mortgage find that the loan companies are asking 7½ per cent., as compared with the 7 per cent. rate which has been current since about the end of the war. The advance in rate from 7 to 7½ per cent. has been fairly general among Toronto loan companies. Some of them are charging 8 per cent. on especially small and troublesome business. The trust companies are in the main still charging only 7 per cent.

The Present Position of the Lumber Industry

By "Prospect"

Being lumbermen and having our sympathies wholly in that direction, we may forget in some measure other lines of commerce and endeavor.

Searching for a cause of the conditions existing to-day affecting our business, we are led back for some few years. Here it may not be amiss to state that our future generation of lumbermen will look back on to-day as being similarly the source of their then present business activities.

Chief among salient causes of conditions relating to our line of industry is the lack of a proper care of the existing supply of lumber by the previous generation of lumbermen, and a failure to make ample provision for a new growth of timber either by the individual himself or with the help of the state. And a wanton waste of the available standing timber and its product marketed as lumber.

Next in order would appear a lack of a proper value being placed upon lumber by both the state and local manufacturer. One illustration will suffice to establish this claim. We all know that lath were until lately marketed under a system providing only a return for the labor and investment expended to produce them, with no thought of the value of the lumber used in their manufacture.

With these two causes alone we will endeavor to show that the effect experienced to-day by the lumbermen be he retailer, wholesaler or manufacturer, is only the outcome of lack of foresight in providing a future supply of timber for the present needs, and a wanton waste of the then plentiful supply as given by nature.

Lack of Available Raw Material.

The wheels of time grind exceeding slow but they grind as small. as slow. We are being shown a true illustration of this fact in our present lack of available raw material and the consequent high value placed upon it.

We do not wish to state that the high prices of to-day can be attributed to the causes mentioned in all cases, because there are many other contributing influences all having a bearing on the prices prevalent to-day. They only hastened the coming of a day of reckoning, which we would have had to face ultimately.

As lumbermen of judgment and vision we must admit that war and its urgent necessity for speedy output has in a great measure forced upon us the high scale of wages to-day in existence. It also forced us to forget to provide for any future needs. The present was all we were able to grasp, and in copeing with its vast needs, we forgot to insure our future requirements. Now we must stop, and in the language of the street, watch our step.

We do not need to grope as in the dark but with a firm hand, a clear head and steady eye, look the future in the face and prepare to meet the outcome on an even level footing, firm in the belief that a sense of justice will prevail and the distorted present will blend with the dim future into one harmonious atmosphere fraught with the belief that all is well in this old world of ours.

The outcome will be all that we can hope for, and will justify our desire to not go down into the valley of despair but remain on the hilltop where we can view the distant horizon and watch for the coming of better and grander achievements along the lines of our various activities be it as a retailer, wholesaler or manufacturer.

Each Must Work Out Own Salvation.

Have we been selfish and only looked at our own little troubles? Perhaps—Yet each industry must work out its own salvation, and it is a care of ourselves which we must exercise else who will?

To-day in every line of endeavor we find a desire to come down from the peak, as we call it. Can we? Will it be in the interests of all to do so?

These and many more problems present themselves for our solution, and they must be solved by the individual.

Will a sudden drop in present prices present an adequate solution of our problem. Would it enable us to have an abundant supply in our storehouses and permit of a distribution of these stocks at a much lower cost to the consumer?

Temporarily yes, but what will we have gained by our experience? Will we realize that only by a proper method of reforestation, backed by a system of distribution fair and just to all, can we eliminate a repetition of existing circumstances.

We are to-day face to face with a decided repulsion to carry on business at any price.

This must last until with the sifting of circumstances we find a bed rock upon which we can build our future business relationship one with the other.

Labor is no farther to-day in its march toward independence than it was at a lesser rate of pay. As merchants, the same is equally true with us all.

Mutual Interest of Capital and Labor.

Then let us endeavor to estabilsh a common basis upon which to erect our future trade. Labor without its motive power, capital, is helpless and without labor, capital cannot accomplish the undertakings which are only awaiting our arriving at a just respect of each other. Why then must we be continuously bluffing and bickering with one another?

The files of the departments issuing permits, those of the architects and engineers, will show us that there is an available desire to utilize both capital and labor. Those of us, who are optimistic, predict a great increase in activity along every line of undertaking in the coming year.

Let us then assure the realization of these evidences by a steady consistent attendance to a proper marketing of our commodities and a just demand for the expenditure of our substance, and we will soon tide over what to-day appears to be a hopeless tangle. For to-day will soon be yesterday and the man who does the hard things first finds that what he thought unsurmountable is, after all, only trifling, and the vision from the hilltop is much more refreshing than that of the valley, so let us all endeavor to rise above our troubles and we will soon laugh at them.

In conclusion, let us say that the man living for to-day will soon be numbered among those already forgotten.

The future is ours, grasp it and with a smile say the thing can be done, and lo, it is over and forgotten.

May we profit by the experience of others and most especially by our own, which may appear to be almost beyond our ability; yet get the other fellow's viewpoint, and our objections soon vanish.

We have before us a greater country and greater possibilities than lie behind, and though many may fall by the way, yet steady, sane and persistent effort will receive its reward.

Where am I; What am I?

Sir:—

For the following reasons I am unable to send you the cheque asked for:

I have been held up, held down, sandbagged, walked on, sat on, flattened out and squeezed, first by the Canadian Government for Federal War Tax, Excess Profits Tax, Merchants' License and Auto Tax; Victory Loan Bonds, Thrift, Capital Stock Tax, and every society and organization that the inventive mind of man can invent to extract what I may or may not possess.

From the Society of John the Baptist, the G. W. V., the Women's Relief, the Navy League, the Red Cross, the Purple Cross, the Black Cross, the Double Cross, the Children's Home, the Dorcas Society, the Y.M.C.A., the Y.W.C.A., the Boy Scouts, the Jewish Relief, the Belgian Relief, and every hospital in town.

The Government has so governed my business that I don't know who owns it. I am inspected, suspected, examined, re-examined, informed, required and commanded, so I don't know who I am, where I am, and why I am here; all I know is I am supposed to be an inexhaustible supply of money for every known need of the human race, and because I will not sell I have and go out and beg, borrow or steal money to give away, I have been cussed, discussed, boycotted, talked to, talked about, held up, robbed and nearly ruined, and the only reason I am clinging to life is to see what in Hell is coming next.

Charge on Lumber Held for Reconsignment

The $10.00 per day storage charge on cars loaded with lumber held for reconsignment is to be continued beyond January 1, 1921, according to Supplement No. 5 to J. E. Fairbanks' Demurrage Tariff I. C. C. No. 8, which has been filed with the Interstate Commerce Commission at Washington.

According to the reports from Class 1 roads to American Railway Association, figures for the week ending Nov. 26, 1920, show an accumulation of only 26,324 cars of all commodities made up as follows, says a recent bulletin of the National Wholesale Lumber Dealers' Association:

8270 cars held for export.
3861 cars held account consignees unable to accept.
3185 cars held for reconsignment.
2153 cars held account of connections unable to accept in interchange.
7509 cars held account of disability reporting roads to make delivery.
757 cars held for billing.
307 cars held account of embargo.
282 cars held for delivery to contract piers or floating.

These figures are for comparison with the report for the week ending Oct. 8, 1920, referred to in our Bulletin of Oct. 26, which showed an accumulation of 41,135 cars of which 2,377 cars of all commodities were held for reconsignment and 18,000 cars held for export and coastwise movement. The reported accumulation for week ending Dec. 3, is 21,991 cars. These reports have not been divided as to commodities so as to show what percentage are lumber shipments.

Big Drop in Wages of Lumberjacks

A recent despatch from Northern Ontario says that a general reduction in wages in the lumber woods in all sections of this part of northern Ontario is taking place, and it is believed the average monthly wage is being reduced approximately fifty per cent. This decrease has not been arrived at in stages, but consists of one general cut.

Inquiry tends to show that the woodsmen involved have complained about the reduction, but in almost every instance have continued to work at the new low wage scale. This is made imperative owing to the surplus of labor making it quite impossible to find employment elsewhere. The cost of living is coming down slowly. Big and little enterprises alike from the small farmer clearing his land of pulp timber to the great paper-making companies are numbered among those reducing pay to their employees.

British Industries Fair Next Month

Arrangements have now been completed for the reception of a record number of visitors to the British Industries Fair which opens on the 21st of February in London and Birmingham, and on the 28th of February at Glasgow.

The first British Industries Fair was held in London in 1915 and the success which has attended the fairs held since that date has satisfied the Department of Overseas Trade as to the correctness of the system of organization. The coming fair, though vastly increased in size and comprising the largest number of exhibitors of British and Colonial manufactures ever assembled in one trade fair, will be run on the lines which proved so successful in the past.

As only genuine trade buyers are invited, all who visit the fair are known to be there for business and not for curiosity. Exhibitors are therefore able to give proper attention to the buyer and the buyer is able to do his business unhampered by crowds of sightseers.

The services which are rendered to the invited buyer do not end with the mere bringing together under one roof of the chief British manufacturers. Every possible assistance is given to him in finding the particular articles he wishes to buy. The resources of the British Government are at his call. In the fair buildings the Department of Overseas Trade opens fully staffed offices in order that buyers and exhibitors may obtain authentic information on all points of importance. Mr. F. W. Field, the British Government Trade Commissioner at Toronto, will be in attendance at the London Fair and will be pleased to meet and assist all visitors from the Dominion. Other officers of the department will be available to answer inquiries as to tariffs in all parts of the world. A special staff gives information as to shipping and transport and other officials are prepared to advise as to the most likely sources of supply, not only of the articles included in the fair, but also of all Empire productions. Such assistance is of incalculable value.

The department's help does not stop with advice and information. Material arrangements are made for the buyer's comfort and assistance at the fair. Interpreters are provided for his use free of charge. Special writing rooms are set apart for his convenience, where he can carry on his correspondence. Special post offices deal with his letters and telegrams. Restaurants and tea rooms make it unnecessary for him to leave the fair buildings to get his meals.

Visitors to the fair also receive valuable assistance from the manner in which the catalogues of the fair are produced. Instead of being mere lists of the names of the exhibitors, they are books of reference in which they can find in their own language a classified index of every article exhibited. Supplementary pages contain tables of English and foreign weights and measures compared; and the moneys of all the principal countries are compared with their English equivalents.

The catalogues are not sold, but are handed gratis to all visitors to the fair from overseas. Their contents, serving as they do, as books of reference for the year, and consulted regularly in all parts of the world, are edited with expert knowledge by selected officers of the Department of Overseas Trade and the local committees.

Buyers from overseas who wish to visit the fair should apply as early as possible to the nearest British Trade Commissioner at Montreal, Toronto or Winnipeg, from whom they will be able to secure full information. On their arrival in England it would be to their advantage to communicate at once with the secretary, British Industries Fair, 35 Old Queen Street, London S.W., or, should the fair have commenced, at the White City, Shepherd's Bush, London, W. 14.

Intending visitors will do well to secure hotel accommodation in advance, and Messrs. Thomas Cook & Sons with their world-wide organization will provide every facility for doing this, whether the accommodation required is of the kind provided by the largest and most luxurious establishments, or of a quieter and more modest description. The variety is such that every taste can easily be provided for.

A Common Lumberman

I am a common lumber shove
  Composed of common clay,
And feed on common fodder
  For I get but common pay.

The lumber life's one common round
  Of climbing up and down,
Of common law and lofty piles
  With others all aroun'.

My time begins at 8 a.m.
  On every common day,
Of shoving common lumber
  In the usual common way.

My day winds up at 5 p.m.
  And in the common way,
I cease from shoving lumber
  Till 8 a.m. next day.

Saturday, O jay, best day of all,
  I shove but half a day,
When the boss invites me in
And shoves me out my pay.

Then to a common home I trek
  In the common toiler's way,
And hand a common housewife
  My common weekly pay.

Yes, I'm just a common mortal
  And tread the common way,
And expect to die a common death
  And sleep in common clay.

How sad to be a common man
  And grind the common way,
Grinding out a common grist
  Of common coin as pay.

I was a very common boy
  And went to common schools
To learn the way to riches
  And avoid all golden rules.

O! to be a common boy again
  And go to common schools,
In search of light and learning,
  And not gold, the pay of fools!

—Holmes.

New Firm Will Specialize in Softwoods

The new wholesale lumber firm of Lay & Haight, which has been formed with offices at 34 Victoria St., Toronto, will specialize in all kinds of softwood, particularly white and red pine, jack pine and spruce. The members of the new organization are Gilbert S. Lay of Toronto, and D. H. Haight of Sudbury.

For thirty-one years Mr. Lay has been associated with the wholesale lumber trade in buying and selling capacities. He was for ten years with Stewart Bros., wholesale lumbermen, of Buffalo, and after they sold out to the R. Laidlaw Lumber Co., Toronto, Mr. Lay continued with the latter firm for twelve years. Then he joined the Eyer Lumber Co., Limited, 34 Victoria St., being closely connected with

Gilbert S. Lay, Toronto

D. H. Haight, Sudbury, Ont.

the late John H. Eyer for nine years. Mr. Lay is favorably known to the trade all over the province.

His partner, Mr. Haight, is a member of Haight & Dickson, Sudbury, who operate a sawmill at Mileage 93 on the Canadian National Railways, and has been many years in that district. The new mill, which is equipped with a circular saw and a horizontal resaw, as well as a lath department, cuts about 35,000 feet a day of white pine, jack pine and spruce. Mr. Haight, who has charge of the woods operation, has been in partnership with Mr. John Dickson for several years. They have owned mills at various points in the north and have cut up large stocks of logs. The plant of Haight & Dickson at Mileage 93 will during the coming season saw many of the 1919 logs of the firm which, on account of low water, were held up last spring.

This cut has been bought and will be handled by the wholesale firm of Lay & Haight of Toronto. Mr. Haight resides in Sudbury, where he is an esteemed and well-liked citizen.

Popular Lumberman Killed in Bush

A regrettable accident occurred on November 23, causing the death of Mr. A. R. Martin, of North Bay, a well known lumberman, and woods superintendent for Messrs. Geo. Gordon & Co., Limited, Cache Bay, Ont.

While hunting with a party of friends at Washagaming Landing, Mr. Martin was accidentally shot and killed by a companion who slipped and fell, striking his rifle on the ground, causing it to discharge, the bullet entering Mr. Martin's body, resulting in his death one hour and a quarter later. As soon as the accident occurred, his son John, who was in the party, was quickly summoned, and was with his father when he died. Before he passed away he expressed his sympathy for the unfortunate young man who carried the rifle. The remains were brought to North Bay, where the family had recently came to reside.

The late Mr. Martin was born at Thorne Centre, Pontiac County, Quebec, fifty-nine years ago, and was favorably known throughout the country. He was identified with the lumber industry all his life, and was a practical lumberman in every sense of the word, and was first recognized as such by the late Mr. Robt. Booth, of Pembroke. The principal lumber interests with whom he was connected in his career were Mr. J. R. Booth, Messrs. Booth & Shannon; the Strong Lumber Co., Limited; the Bartlett Lumber Co., Limited, Michigan, and Messrs. Geo. Gordon & Co., Limited, Cache Bay, Ont., with whom he was associated at the time of his death, and for the past twenty-three years.

His genial disposition, his generous nature, his ability to win the confidence, and command the esteem of all who knew him, his knowledge of men, and his respect he held for those working with him, along with his many other sterling qualities, made him respected and admired by all, and well fitted him for the responsible position that he held.

Mr. Martin was a Conservative in politics, and in the provincial election of 1914, was unsuccessful candidate in the Conservative interests, for the constituency of Sturgeon Falls, being defeated by the present member, Mr. Zotique Mageau. He always acted according to what he considered to be in the best interests of the state, and not of party. He was a member of the Masonic Order, an Oddfellow, and an Orangeman, being a member of Sturgeon Falls Lodge, 447, R.G.R., A.F. & A.M., and St. John's Chapter R.A.M. 103, North Bay, Minnehaha Lodge, 353, I.O.OF., Sturgeon Falls, and Royal Black Preceptory 541, Cache Bay.

The late Mr. Martin leaves to mourn his loss, a sorrowing widow and eight children.

"Own Your Own Home" Expositions

A pre-season stimulus for renewed building activity this coming spring is shown in the plans now actively under way for "Own Your Own Home" expositions in several large cities.

Under the direction of the Builders' Exchange in Minneapolis, arrangements are being made for an exposition in the Armory early in February. Building material, supplies, equipment and furnishings of all kinds will be exhibited. It is expected to be one of the largest ever held in the middle-west. Display space is now being located and arrangements for the exhibit are well under way.

March 26th to April 2nd a big exposition will be held in the Colisseum at Chicago. Every commodity used in home construction will be shown, and experts in different lines will be there to offer suggestions to the public. Perhaps the largest exhibition of the year will be held in New York, April 16-30. Last year's exhibit in New York attracted world-wide attention.

Engage Counsel on Water Competitive Rate Case

At the last meeting of the Board of Trustees of the National Wholesale Lumber Dealers' Association of New York the proposed cancellation of the so-called water competitive rates on lumber from the southeastern states to Eastern and New England, water competitive points was very fully considered and the Railroad and Transportation Committee, Mr. B. C. Currie, Philadelphia, Pa., chairman, was requested to actively oppose the cancellation of these rates before the Interstate Commerce Commission. On November 5, 1920, the National Association filed a formal protest with the commission against the cancellation of the rates. The tariffs were suspended by the commission until March 22, 1921, unless otherwise ordered, and the case known as Investigation and Suspension Docket 1240, is assigned for hearing in Washington on January 5, 1921. The New York Lumber Trade Association is co-operating with the National Association in this matter and there have been several conferences between Mr. H. B. Coho, secretary of the New York Association, and members of the Transportation Committee of that association, with Mr. W. W. Schupner, department manager, and Mr. W. S. Phippen, traffic manager for the National Association. Mr. Phippen was in Washington last week and arrangements have been made to retain Mr. Wilbur LaRoe, Jr., as counsel to represent these two associations in fighting the case before the commission. Mr. LaRoe was formerly chief attorney examiner for the Interstate Commerce Commission, and resigned some months ago to engage in private practice. Mr. LaRoe is an expert commerce counsel and while with the commission presided at many of the most important hearings.

Writ Issued Against Lumber Company

The Attorney-General of Ontario, on behalf of his Majesty the King, has issued a writ against the Shevlin-Clarke Company, Fort Frances; J. A. Mathieu, Duncan Price and B. V. Holmes, Fort Frances; Elbert L. Carpenter, H. C. Clarke, F. P. Hixon, R. W. Whetmore, E. A. Carpenter and R. G. Chisholm, of Minneapolis. The writ asks:

(1) The cancellation for a certain grant of timber berths 45 and 49 in the Quebec Forest Reserve purporting to be made on August 23, 1919, by the Minister of Lands, Forests and Mines to the Shevlin-Clarke Company, Limited, and for cancellation of any licenses or renewals thereof, on the ground that they were void ab initio, and for damages and an accounting.

(2) For moneys had and received and due and owing, and for damages for conspiracy, fraud, deceit and conversion in respect of the timber cut on the said berths.

(3) For damages in respect of trespasses and waste committed, and for an injunction restraining further trespasses, waste and conversions.

(4) For an account of all timber cut or removed in any operation heretofore carried on by them in the district of Rainy River or in the district of Kenora, and for payment of all moneys found due and owing.

What Wholesaler Does for Lumber Industry

Essential to the Welfare, Expansion and Stability of the Business—His Place and Responsibility in Distribution of Canadian Forest Products

Editor, "Canada Lumberman":—

Sir,—The wholesaler, I contend, has filled a place in the scheme of things ever since manufacturing, sales and distribution began. Many attempts have been made to belittle his usefulness; he has been called a barnacle and an unnecessary adjunct, an essential evil, a fifth wheel on the coach, a leech, an incubus, a parasite, a non-producer, an impediment, an incumbrance, and many other names neither euphonious nor complimentary.

In spite of all these attacks, the wholesaler in practically every line of trade still holds sway. His number is increasing rather than decreasing. Any institution or system which has existed as long as the wholesaler, must possess merit and worth; otherwise its presence would have been wiped out long ago.

Much more might be said along the line of what the wholesaler can do, has done and is doing to find new markets, create wider demand, assist small sawmillmen, act as a bearer of information and a ready reference, take the risks, pay the interest on bank advances and the insurance on stock, sometimes for many months, before he can realize on the goods. Every organization cannot maintain a sales force, and the small millmen would become the victims of monopolies and mergers if it were not for the wholesaler who buys his stock, makes him advances and enables him to carry on activities throughout the year. The wholesaler is selling agent for many concerns and is able to market their product much more cheaply than they could by paying a sales manager, equipping an office, meeting travelling expenses and carrying on the various other tasks to maintain such a service and department.

A Legitimate and Logical Sphere.

In your issue of June 1st, 1919, I read, with much interest, an editorial on "The Place of the Wholesaler in Lumber Distribution," and it was so forceful and logical that I cut it out then and have kept it ever since. I am sending it to you in the hope that you will reproduce it in connection with these few remarks, which I have to offer. Here is what you said:

> "In connection with the problem of rising costs, now and then some economic advocate looms up who declares that the way to reduce expenditure and keep the price of things down to a minimum is to abolish the wholesaler, the jobber, the middleman, the distributor, the go-between, etc.—for he is known in various lines by a variety of titles. By one fell swoop, these ardent supporters of radical reforms would annul such a system of marketing and thus affect a substantial saving! They would eliminate one profit, at least, and afford ready means of acquiring commodities at a figure as near as possible to the actual cost of production. Such vain theorists might go a step farther, wipe out the retailer and have all manufacturing enterprises conduct their business direct, take all travellers off the road and have every person requiring anything send straight to the plant, and thus get it by mail or rail.
>
> "It has been generally found, when certain concerns in certain lines shout loud and long about there "being no middleman's profit," that they manufacture goods themselves, and thus "save the people money," there is not a great deal in their pretentious claims. These firms are generally manufacturing themselves and not only secure the margin which production demands, but add on a just proportion for what the wholesaler would get—if they bought through him. Such doctrines may look well in print or as speculative propositions, but they seldom work out satisfactorily or equitably in practice.
>
> "There will always be the wholesale distributor as long as supply and demand have to be met and the different wants of individuals and communities catered to. In all merchandising methods, the wholesaler has and holds a proper and justifiable place. He is not a fifth wheel to the coach, an embargo on costs, a traditional, arbitrary nuisance, or economic evil, as some would lead the consumer to suppose.
>
> "In the lumbering industry, as in others, if it were not for the wholesaler, who is a 'guide, philosopher and friend,' to the retailer, in not a few instances, many small mills would not be in operation to-day. The business would gradually drift and develop into the hands of larger and influential concerns. Monopolies and mergers would, in all likelihood, be the outcome, and the little fellow would go to the wall, for he would not be able to withstand the strong competition.
>
> "The wholesaler encourages, supports and finances propositions, takes innumerable risks and undertakes obligations which have to be shouldered by some one. He is a barometer of trade conditions, a direct and ready selling medium, a supply man, the builder up of connections between manufacturer and retailer, the pioneer of new avenues of trade and of wider distribution. He assumes responsibilities and carries many along in business who, but for his assistance and co-operation, would not be able to pull through the trying conditions of the present period. The wholesaler naturally has to depend upon the retailer for his business. Their interests are in many respects mutual, and interdependent. Not every organization can maintain a large and efficient staff of sales representatives to go direct to the trade. The wholesaler acts not only as the outlet of one mill, but several. Anyone who carefully analyzes the lumber situation in its processes of manufacture, sale, distribution and consumption appreciates the fact that the wholesaler is essential to the welfare and upbuild of its varied activities, and is not an artificial interference with supply and demand. On the contrary, in the magnitude and expansion of the business, with its numerous ramifications, he is serving in a logical and legitimate sphere and is a strong link in the chain of industrial and mercantile life."

Plan, Purpose and Work of Wholesaler.

In the subsequent issue there appeared another timely article by L. L. Shertzer, a prominent wholesaler operating in the South, who, in the course of an address on "The Purpose, Plan and Work of the Wholesaler," asked certain questions and answered them in an admirable manner.

"First: I think he wants to sell direct to the consumer for about the same reason the cow, at the risk of an eye and a skinner neck, wants to poke its head through a barbed wire fence to get a nibble of the grass in the other field. 'The grass looks greener in the other fellow's field.' Mr. Millman has not weighed the conditions, some of which are: The consumer wants to buy delivered f.o.b. his factory. The mill man generally wants to see his mill. The freight problem, constantly increasing in intricacy, is between them. The actual selling, the selection of customers, which is one of the most important items, is determined more from experience than ability; the additional accounting and the additional credit risk are all to be considered. He has a distorted idea of the profit the wholesaler makes and thinks he makes it easier than he does. But he, the millman, in selling direct to the trade, does not count on dividing with the consumer but on getting all the additional profit himself. I want to show that if he performs the additional service necessary to get it, he is entitled to it, but that it will cost him the legitimate wholesaler's profit to obtain it and he will save himself time and work by selling f.o.b. mill to the first-class wholesale trade; and in the last analysis will get more, or at least as much out of his stock.

"Second: Am I, as a wholesaler, an unnecessary factor in the business? I decided I must be a factor in the system, else by the very nature of things I would long since have been eliminated. If the legitimate wholesaler has no place, then our whole merchandising process is wrong. Observe I use the term 'legitimate' wholesaler. I mean by that, that I must have sufficient capital in my business to discount my bills, carry my accounts, and do business right. I must not be confused with the commission man who simply furnishes the order and sends it to the mill to ship and carry the account. He is a salesman and is entitled to a sales commission. In my field as a wholesaler I am a factor in our business credit system and in so far as I carry the accounts and aid in financing I am banker for both the sawmill and the consuming factory.

Rendering Service to the Millman.

"Third: Am I rendering service to the millman? If the manufacturer of lumber prepares his product for the market in a scientific manner, devoting his attention to getting the very best out of his log in grade and scale, considering by-products and the utilization of waste, he will find ample scope for both his ability and capital. He generally finds them both sufficient. In addition to manufacture, the marketing of lumber is in itself a scientific and far-reaching business.

The manufacturer can not perfect a sales organization that reaches the consumer without an expense equal to, or greater than, the oeprating expenses of the wholesaler. This additional investment and organization should earn additional profit, which the millman is entitled to because of additional service.

"I decided that whether or not I can be of service to the millman depends upon his experience, organization, financial strength and point of view. If he is one of the big boys with an expert accounting department, traffic manager, an experienced sales manager and credit man, and a salesman on the road for each car per day he manufactures, with ample capital to carry it all, I can not help him any because he has already added to his manufacturing organization a selling service equal to mine. It then becomes a question of experience and ability, of salesmanship and service, as to who gets the business.

Wholesaler Does Not Boost Price.

"I think it costs him more to sell a car than it does me because he sells his own stock only, which is more or less limited. By the time he figures his selling expense, extra credit risk, and the infinite number of things that enter into getting to the man who cuts up the stock, especially if he counts the worry of it, he has earned all he gets, just as the wholesaler does. He has not earned more than a reasonable wholesaler would make in handling his stock.

"My observation may be biased by my position, but I lay down the proposition that the wholesaler does not boost the price, and if anybody works on a cost-plus basis it is he. The plus is much less in proportion to his investment, service and risk than that of almost any other business. He is more frequently caught short supplying a contract to his factory than he is finding himself long on his sawmill purchases on an advancing market. As a general proposition he has the highest percentage of any department of business in standing by his ethics in filling his contracts on both ends of his business, because his assets are satisfied customers and mill connections.

"If I can show my customer that as a wholesaler I do not increase the price to him, but rather assure him his supply at an average price; that by taking his business in large blocks I decrease his buying expense and enable him to figure a year ahead on his cost; that, whether I do it from policy or necessity, my business life depends upon giving him a square deal, am I not rendering him a service? I render him a further service by giving him the class of stock he needs on the most advantageous rate. For on the proposition that I put the millman's stock where it is most acceptable, I must perforce give the customer stock that is most desirable.

"I have decided I can be of service to both these boys if they permit."

Yours, etc.,
DISTRIBUTION.

National Hardwood Annual in Quaker City

The Twenty-fourth Annual Convention of the National Hardwood Lumber Dealers' Association will be held at Philadelphia, on June 9th and 10th. The recent semi-monthly meeting of the board of managers was held in Chicago, and the report of the secretary during the first half of the present fiscal year was the most favorable from every standpoint that it has ever been possible to present.

The present membership of the National Hardwood Lumber Dealers' Association is 1,396. The finances are in good shape and everything looks promising for the coming year.

Among the firms which have recently applied for membership are: Bethune Pulp & Lumber Co., Huntsville; Nat. Thomas, Mont Laurier. Que.; Martin, McPeak Lumber Co., Limited, Montreal, and the Bradley Co., Hamilton. George C. Goodfellow, of Montreal, is the Canadian representative on the board of directors of the N.H.L.D.A.

The Square Pack Shingles Will Stay

At the recent conference of the West Coast Shingle Manufacturers, held in Seattle, many live, progressive matters were discussed Among them was the future of the square pack, so far as red cedar shingles are concerned. The gradual elimination of the thousand pack seems now to be desired.

In the course of his address, E. C. Miller, president of the Shingle Branch of the West Coast Lumbermen's Association, said:—The shingle manufacturers have come to an absolute agreement. The organization has never been united as it is to-day. In the new method of packing by the square each bundle will contain one-quarter square and no shingle thinner than 5 to 2 in thickness will carry the Rite-Grade trademark. Everyone is in accord. The outlook is for a more stable price on account of the reduction in the number of grades and also in better grades. The retail dealer and the consumer at large are going to like our action.

What the shingle men did is briefly told in the following:—

"Moved that we pack 16-inch Rite-Grade shingles 5 to 2 with specification of 20-20 courses per bundle, covering capacity based on 5-inch weather exposure stenciled thereon, showing one-quarter square. This means four bundles per square, five bundles per thousand. That we omit Rite-Grade mark on all 6 to 2 shingles. That money contributed by manufacturers shall be used for advertising and trade extension work for red cedar shingles, all advertising to carry the Rite-Grade trademark."

Previous to the adoption of the resolution, an interesting discussion took place. H. J. Mackin, manager of the Canadian Western Lumber Co., Fraser Mills, B.C., said that the experience with his mills had been that their trade did not want the square. His company operates one hundred and sixty retail yards and naturally would try and sell them shingles instead of witnessing them handle patent roofing. "Our people," he said, "are unanimously against the square pack. We will handle the square when it actually is a square. If you are sincere, why don't you label your shingles properly stating exactly what they will do? I don't believe we can consider any other basis in the operation of our mills at the present time."

At length the convention took up the question of the exact form of the endorsement of the square. There were many attempts to draft the statement. There were additions, amendments and eliminations, with suggestions coming from all parts of the room. Finally the draft was approved as follows:

Moved that we pack 16-inch Rite-Grade shingles 5 to 2 with specification of 20-20 courses per bundle, covering capacity based on 5-inch weather exposure stenciled thereon, showing one-quarter square. This means four bundles per square, five bundles per thousand. That we omit Rite-Grade mark on all 6 to 2 shingles. That money contributed by manufacturers shall be used for advertising and trade extension work for red cedar shingles. all advertising to carry the Rite-Grade trademark.

The vote stood 508 machines for the proposition to 42 against it. The negative vote follows: L. B. Menefee, 20; Bratlie Bros., 10; S. E. Putnam Shingle Co., 6; Schwartz, 6.

There was a general discussion of the effect of the new move Its most advantageous point was shown in the fact that 16-inch shingles in 20-20 courses, with 5-inch weather exposure, would readily interchange in the two kinds of pack. As stated, four bundles of such pack would make a square and five bundles a thousand, so the manufacturer may use either method of packing or of bookkeeping or of describing the produce at will. Mr. Hone, representing the wholesalers, brought out the point that quotations could be based on the square pack. with 25 per cent. added to the figures to cover the thousand pack.

The members of the shingle branch confirmed the recommendation of the nominating committee, consisting of John McMaster, C.E. Putnam and Henry Olwell, and elected the following directors:

E. C. Miller, Will C. McMaster, E. E. Case, H. J. Bratlie, G. A. Bergstrom, H. A. LaPlant, F. H. Jackson, and J. H. Prentice.

Delegates at large: N. C. Jamieson, John Shull, A. H. Landram and P. R. Smith.

Secretary J. S. Williams, of the shingle branch, then presented his report for the year. After telling of the personnel of the branch he reviewed the services which it performs and of its contribution to the architectural and building code service of the National Lumber Manufacturers' Association. There are now 110 members of the shingle branch, of which 66 are affiliated with the Rite-Grade plan. Twenty-two mills in British Columbia are also members of the Rite-Grade plan. Present machines under Rite-Grade contract number 528.

New Officers of Whalan Mills

Hon. T. W. McGarry of Toronto, president of the Whalan Pulp & Paper Mills, is on an extended business trip to the company's plants in British Columbia. Several important changes have taken place in the management since Sir George Bury resigned. The company own three plants at Swanson Bay, Port Alice and Howe Sound and expect to turn out 70,000 tons of pulp during the coming year. All the units will be operated to capacity. It is just announced that the Reliance Mill and Trading Corporation of New York will take charge of the manufacturing end of the business. John Ball is the president of the Reliance Corporation and E. M. Waite is the vice-president. The former was for a number of years with Price Bros. & Co. of Quebec, and the latter was for a considerable time with the International Paper Co. and later with the Great Northern Paper Co. Messrs. Ball and Waite will take personal direction of the plants, which are expected to turn out 110 tons of strong sulphite pulp, 50 tons of easy bleaching and 90 tons of bleached daily.

Archie Alcorn, the well-known horseman, who recently sold his famous trotter Bill Sharon to Thomas Murphy for $28,000, a record price, is a wealthy lumberman of New Brunswick. Like many others who made their stake in the New Brunswick lumber woods he is an ardent advocate of all kinds of sport, but specializes in horse racing. His string made a wonderful showing during the past season.

All Aboard for the Big Convention at Ottawa

Thirteenth Annual Gathering of Canadian Lumbermen Will be Held in Capital City January 12th and 13th—Record Attendance Promised—Fine Program

Ottawa, the capital city of Canada, which will this month welcome the Canadian lumbermen, is too widely known to require any extended reference regarding its beauty, commercial, financial or industrial development.

It is some years now since the Canadian Lumbermen's Association met in the Capital, and on the present occasion the visitors will be extended every hospitality and greeted with a programme of interest, instruction and entertainment that has never been surpassed.

The Thirteenth Annual Convention of the Canadian Lumbermen's Association will take place at the Chateau Laurier on Wednesday and Thursday, January 12th and 13th. Every effort is being made to insure the largest attendance and most outstanding features for the forthcoming gathering, and, as Secretary Frank Hawkins says, "the convention is big with possibilities. It is for the members to say what the limit of this bigness shall be."

Ottawa of late years has been well advertised by the Industrial and Publicity Commission, and there has been sent to all the members of the Canadian Lumbermen's Association a neat folder, giving splendid illustrated views of the scenic attractiveness, commercial activity and industrial enterprises of the city. One striking picture is a panoramic view of the plant of J. R. Booth, Canada's lumber king, at Chaudiere Falls, Ottawa. The output of Mr. Booth's plant exceeds 100,000,000 to 150,000,000 feet of lumber annually and 45,000 tons of newsprint, besides a large quantity of pulp, both chemical and mechanical. A splendid illustration is also presented of the C. Edwards Co., showing its sawmills, sash, door and box factory.

Industrial Advantages of Ottawa.

Ottawa occupies a unique position with regard to industrial advantages. This is the reason the city is, probably, the largest lumber centre in the world with a normal average production of 450,000,000 to 500,000,000 feet of lumber a year. Ottawa also has large industrial factories producing paper, cardboard, tents, awnings, cement, etc. It is pointed out that for woodworking, paper-making and kindred industries, there are raw materials available within the city and within easy access. There is cheap power and light and a short haul, of the products of the Great Lakes, mines and soil, to Ottawa. It is declared that easy access and splendid rail and water connections make Ottawa an ideal spot for new industries, that no place can offer better inducements nor a better combination of circumstances that beget success.

The city is located 115 miles northwest of Montreal, 256 miles northeast of Toronto and 600 miles north of New York. There are 119 wholesale houses in Ottawa, 192 industries, 9 steam railways entering the city and 8 water transport lines. The city covers 5,295 acres or approximately eight square miles. The government buildings, which are not assessed, are valued at $21,158,190. The total taxable realty in Ottawa last year was $98,885,599. The Capital has 60 miles of paved street, 216 miles of concrete walks, 187 miles of water mains, 145 miles of sewers and 47 miles of street railway.

Many other facts might be presented regarding the prestige, position and expansion of the national law-making centre, but it is in a lumber sense that Ottawa will be directing its thoughts on January 12th and 13th. In this issue of the "Canada Lumberman" and in the last one there appears several artistic illustrations of representative institutions and scenic settings of the capital, for the loan of which the "Canada Lumberman" is indebted to the Canadian National Railways.

History of Canadian Lumbermen's Association.

A word or two regarding the inception, growth and strength of the Canadian Lumbermen's Association may not be amiss. This national body of manufacturers and wholesalers, who make, handle and distribute the forest products of the Dominion, now enjoys a membership greater than at any time in its history. The interest has developed steadily and the work and worth of the organization is being more widely appreciated and attested as the years roll round. The 1920 gathering, which was held in the Chateau Frontenac, Quebec, was a wonderful assembly, but the prospects are that the 1921 session will surpass it. During the first few years of its formation the annual meetings took place in Montreal and Ottawa; in 1917 the convention met in Toronto and in 1918 in Montreal, 1919 in St. John and 1920 in Quebec City.

It was in August, 1908, that the Canadian Lumbermen's Association was launched. Gordon C. Edwards, of W. C. Edwards & Co., Ottawa, was the first president and held office until January, 1910. J. B. Miller of the Parry Sound Lumber Co., Parry Sound, who now lives in Toronto, filled the chair acceptably for the next two years; then came Alex. MacLaurin of the St. Maurice Paper Co. and Campbell, MacLaurin Lumber Co. of Montreal, who guided the destinies of the C. L. A. until January, 1914. Hon. George Gordon, of George Gordon & Co., Cache Bay, followed as presiding officer for a two-year term and next W. E. Bigwood, of Graves, Bigwood & Co., Toronto, discharged the duties of president. W. Gerard Power, of the River Ouelle Pulp & Lumber Co., St. Pacome, was Mr. Bigwood's successor, and in February last Mr. Dan McLachlin of McLachlin Bros., Arnprior, was made presiding officer.

The Retiring Directors of the Association.

The vice-presidents are Walter C. Laidlaw of Toronto, and Angus McLean of Bathurst, N.B. Frank Hawkins has been the able and obliging secretary of the C. L. A. since its founding, and R. G. Cameron of Ottawa, who is a popular lumberman, is honorary-treasurer. There are twenty-one directors in the association, seven of whom are elected each year for a term of three years.

Those who will retire this year are E. R. Bremner, Ottawa; D. McLachlin, Arnprior; W. C. Laidlaw, Toronto; George W. Grier, Montreal; David Champoux, Restigouche; J. Fraser Gregory, St. John, and Sir D. C. Cameron, Vancouver. All these gentlemen are eligible for re-election. Doubtless a number of them will be returned.

Those who are on the Board to serve one year more are W. E. Bigwood, Toronto; Gordon C. Edwards, Ottawa; A. E. Clark, Toronto; Walter M. Ross, Ottawa; W. Gerard Power, St. Pacome; Alex. MacLaurin, Montreal, and Angus McLean, Bathurst.

Those who were elected last year for three years and have two years yet to spend as members of the Executive are James G. Cane, Toronto; W. J. Bell, Sudbury; Duncan McLaren, Toronto; Arthur H. Campbell, Montreal; Sir Wm. Price, Quebec; Rufus E. Dickie, Stewiacke, N. S.; J. B. Snowball, Chatham, N. B.

The Agenda and Engagements.

An outline of the proceedings of the convention is that on Wednesray, January 12th, the gathering will open at 10 o'clock in the Chateau Laurier with a presentation of the president's report, as well as those of the secretary and treasurer, the directors, the Transportation Committee, the Legislation Committee, etc.

There will be session during the afternon and the usual convention banquet will be held on Wednesday evening at 8 o'clock.

Every arrangement has been made for the entertainment of the ladies, and a Ladies' Reception Committee has been appointed. On Wednesday from 4 to 6 o'clock there will be a tea given to the lady guests. On Thursday, January 13th, there will be a business session in the forenoon, a men's lunch at noon and another business session in the afternoon. In the evening there will be a buffet dance and bridge.

Economic Use of By-Products in Lumber Line

Few Industries Absorb Large Quantities of Sawdust or Shavings—Many Articles Made from Mill Waste but Not Commercially Profitable as Yet

This is the day of conservation when much is heard regarding thrift, increased production, the elimination of waste and the utilization of all by-products. Naturally attention is directed at the present time toward sawdust and shavings, and during the past few weeks here has come to the "Canada Lumberman" many suggestions, some practical and others theoretical, of what can be done with sawmill waste.

It is easy to invent, speculate, weave fine theories and draw beautiful pictures, but it is another thing to put a proposition over successfully in both a commercial and financial sense. The latter is where the hammer strikes home and brings many of the visionary ones down to earth. However, a discussion of the subject of sawdust and its probable uses is both instructive and timely, and the subjoined opinions and correspondence will be read with not a little interest.

Some of the Things Produced

Much attention is devoted to the use of sawdust and planing mill chips on a commercial scale. Wm. B. Stokes, who is the specialist in charge of forest products exhibits of the Forest Products Laboratory of Canada, Montreal, says: "Some of the known uses of sawdust are:

Fuel in furnaces and stoves;
Fuel in gas producers;
Briquettes;
Fire lighters;
Fur dressing;
Meat smoking;
Absorbent on floors, in cuspidors, etc.;
Fire extinguisher;
Cleaning and drying agent for metals, machinery, etc.;
Bedding in stables;
Composition flooring, artificial wood, etc.;
Ethyl alcohol;
Distillation and extraction;
Hardening and annealing of metals;
Packing of all kinds, bottles, canned goods, etc.;
Heat insulation in cars, ice houses, etc.;
Sound deadening in floors, etc.;
Shipment of meats;
Shipments of grapes and other fruit;
Manufacture of soaps;
Manufacture of fertilizers;
Packing of ice;
Cement, mortars and plasters;
Burning clay products;
Floor-sweeping compounds;
Manufacture of oxalic acid;
Manufacture of carborundum and calcium carbide;
Protection of fresh concrete from too rapid drying;
Manufacture of illuminating gas;
Manufacture of wood meal fodder;
Manufacture of oatmeal wall paper and velvet wall papers;
Lettering on floral emblems;
Manufacture of dues;
Railroad signal rockets;
Medicinal purposes;
Stuffing pin cushions and dolls;
Purification of gas;
Composition paving blocks;
Manufacture of fireworks;
Circus rings;
Dressing wounds;
Moth preventive;
Coloring black clay pipes;
Drying ink;
Water-proofing mixtures;
Currying animals;
Tanning extracts;
Filtering medium;
Manufacture of wood floor."

Continuing, Mr. Stokes says that they have not at the Laboratories in Montreal. at present any division of lumber to investigate the possibilities of by-products of the wood-using industries. He does not know the names of any commercial plants where sawdust is economically utilized.

In connection with the many uses to which sawdust is put, very few would absorb large quantities, and the majority of them could be easily provided by the woodworking plants in the cities where the product is consumed.

No Large Quantities Consumed

The question, however, is really one of the utilization of sawdust in large lumber and joinery mills, and on this Mr. Stokes says:

"In such cases a mechanical rather than a chemical process would stand a better chance of success, the production of sugars and ethyl alcohol by hydrolysis and of acetic acid and methyl alcohol by distillation being highly technical industries. Possibly the production of wood turpentine by partial carbonization of resinous wood wastes in continuous rotary retorts and the briquetting of the residue for fuel might be sufficiently simple to be worked anywhere.

"It is stated that the manufacture of fuel briquettes has been carried on for several years in Los Angeles and that a plant has also been erected in Vancouver. The distillation of hardwood waste from wood-working factories has been carried on by Seaman's process in West Virginia. This process was developed experimentally in Ottawa. Wood flour from a kiln-dried hardwood waste is being made in Montreal and appears to find a ready sale both here and in the United States.

Concluding, Mr. Stokes says: "Until the lumber industry is sufficiently interested in the proper utilization of a division of lumber in the Forest Products Laboratories of Canada, such problems cannot be adequately investigated.

Some interesting light is shed upon the use of sawdust in a communication from L. F. Hawley, in charge of the Section of Derived Products, Forest Products Laboratory, Madison, Wis. The laboratories some time ago sent out a mimeographed circular, entitled, 'Wood Waste Symposium,' which is an elaborate review of the possible uses of various kinds of wood waste. The article was by Rolf. Thelm, who is in charge of the Commercial Extension, Forest Products Laboratory at Madison. Mr. Thelm is also the author of another timely contribution on the "Briquetting of Sawdust."

Various Processes of Distillation.

In connection with the "Wood Waste Symposium," which mentions a large number of miscellaneous methods, by which sawdust can be used. Mr. Hawley says; As you will notice, most of the methods use only comparatively small amounts of sawdust and are generally those in which the sawdust is used without any further treatment. We can think of only one process which has been used successfully for working up large quantities of sawdust and other wood waste into a chemical product. Until recently there have been two plants in operation in this country for some time manufacturing ethyl alcohol from sawdust and other mill waste. We believe that one of these plants is no longer in operation, but this is probably due to the fact that the sawmill was no longer furnishing sufficiently large and regular supplies of waste wood. The other plant has been in almost continuous operation since it was built seven or eight years ago except for a period when the sawmill was rebuilding after being destroyed by fire.

There have been two recent attempts to use hardwood sawdust in destructive distillation processes for the manufacture of wood alcohol, acetate of lime and charcoal. One of these plants never got to the stage of a complete commercial scale try-out and we believe that the idea of introducing this process has had to be given up. The other plant made an unsuccessful attempt to operate a year or two ago and has since been modifying the apparatus and process in order to correct the faults which were developed in the commercial operation.

One or two other processes have been suggested for distilling hardwood sawdust and at least one of these has been tried out on a semi-commercial scale, but we do not know of any case where hardwood sawdust is now being used commercially for destructive distillation.

We are also sending you enclosed a mimeographed reprint of an article on "The Briquetting of Sawdust," which was written several years ago. Since that time we believe that the briquetting operations described in this circular have gone out of business and we

do not know of any place where fuel briquets are now being manufactured from sawdust.

Cattle Food From Sawdust

In the last issue of the "Canada Lumberman," a paragraph appeared on the probable use of sawdust. This is only one of dozens which have been printed in various papers from time to time.

Surely the price of beef should drop if the new sawdust cattle food described by a food chemist to his associates at Chicago comes into vogue. A representative of the Forest Products Laboratory at Madison, Wisconsin, reported that by the use of dilute sulphuric acid which was afterwards neutralized by lime, he was able to make a very satisfactory provender for the lowly kine out of the waste of the buzzsaw. After the lime and acid have been eliminated there remains a soft bran-like food containing about 15 per cent. of water and rich in sugars. Three cows at the laboratory took this ligneous diet on trust, believing it to be grain, and not only did they fatten on it for three months, but gave more milk. The United States Department of Agriculture was so pleased with the experiments at Madison laboratory, which is under its jurisdiction, that it has given directions for the repetition of the experiment on hundreds of cattle at various stations under its control throughout the United States. If the final tests are satisfactory any farmer who has a good woodlot need not worry over famine.

Last week word came from the west that a roofing company would shortly build an addition to its plant for the purpose of making wallboards from sawdust and magnecite. Then the papers are flooded with suggestions regarding the use of alcohol, and a correspondent from Liverpool, Nova Scotia, says: "As an old naval officer, waste is very objectionable to me and I recently sent the following inquiry to a number of papers and they have referred me to the 'Canada Lumberman.'"

> Q.—My attention is frequently arrested by what seems to be an unpardonable waste, assuming that the product can be utilized. I mean the piles of sawdust in places where portable mills have been operated in the lumber woods, as well as at the large lumber mills on rivers. Could not this waste product be turned to account by conversion into briquettes? A little coal tar or refuse petroleum and an inexpensive press could be made to add to the fuel supply, and if the now wasted hard and soft coal dust were added, a really valuable fuel should result. If anything like a favorable result came from a test, a portable press mill could no doubt be constructed and the owner able to operate in the many saw dust districts.—A subscriber.
>
> A.—Your suggestion seems to be a good one. Bring it to the attention of the editor of the Canada Lumberman and Woodworker, Toronto.

A Lady Thinks She Has Good Thing.

A lady from Norwood, Winnipeg, Man., also conceived the idea of making profitable use of mill-waste. She writes as follows:—"Would you be surprised at a woman trying a plan on fuel economy. Poverty is a good master, and I have come to the conclusion that there is too much waste. I had some sawdust, also dust of coal, made into briquettes. I also formed some with sawdust, also sawdust wet with water of tar and baked them in a common baking pan in my slow oven and found that they burned well. There was a fine fire in the morning. I also put the dust of coal in sawdust loosely in my cooking stove and a very hot fire for baking resulted. If anyone will try this loosely and start it over a good fire, they will find good results. It is too bad there is such a waste of sawdust and if it could be converted into some such form as I have suggested, it would save fuel. If my suggestions were further tried out, I believe some good inventions would result, not a few of which would bring about some coal-saving plan."

Still others come, and the foregoing are just a few of the suggestions that are constantly coming to the "Canada Lumberman."

There is another suggestion going around. Workers employed where their hands are likely to get very greasy, usually insist that some provision be made for cleaning them. For this gasoline is often provided, but it constitutes a serious fire hazard, also it is sometimes injurious to the hands. One Ohio automobile plant gets around all this by providing large cans of sawdust in the screw-machine department. Now when a worker has greasy or oily hands, he can simply take up a handful of sawdust and dry them off quite thoroughly. This sawdust does not have any injurious effects and, after the worker has cleaned his hands, it can be used to absorb oil which has been spilled on the floor.—Factory.

The Value of Timber By-Products.

That the by-products of the saw mill will outvalue in the near future the finished lumber is the prediction of a Western timber authority as quoted in a recent issue of the Literary Digest.

"Only 40 per cent. of our cut timber is utilized; the rest is thrown away. This means that the unused 60 per cent. is in such shape that it would not pay to use it. The problem of utilizing waste material," says this authority, "is that of making its utilization profitable." The enhanced value of timber to-day is making profitable the conversion of waste into merchantable products. Alcohol, tanning extracts, turpentine, pine-oils, fiber for rugs, carpets, bags and all sorts of fabrics, imitation leather, linoleums, insulating materials, these are a few of the products obtainable from sawmill waste, which was formerly thrown away.

It has been predicted that the by-product distillates of wood, as wood and grain alcohol, may sometimes equal other sawmill products in value. Grain alcohol may be produced from any wood at relatively low cost, and by a process that yields other products of value as well. This may become a substitute for oil and gasoline in the operation of engines for automobiles and automotive machinery.

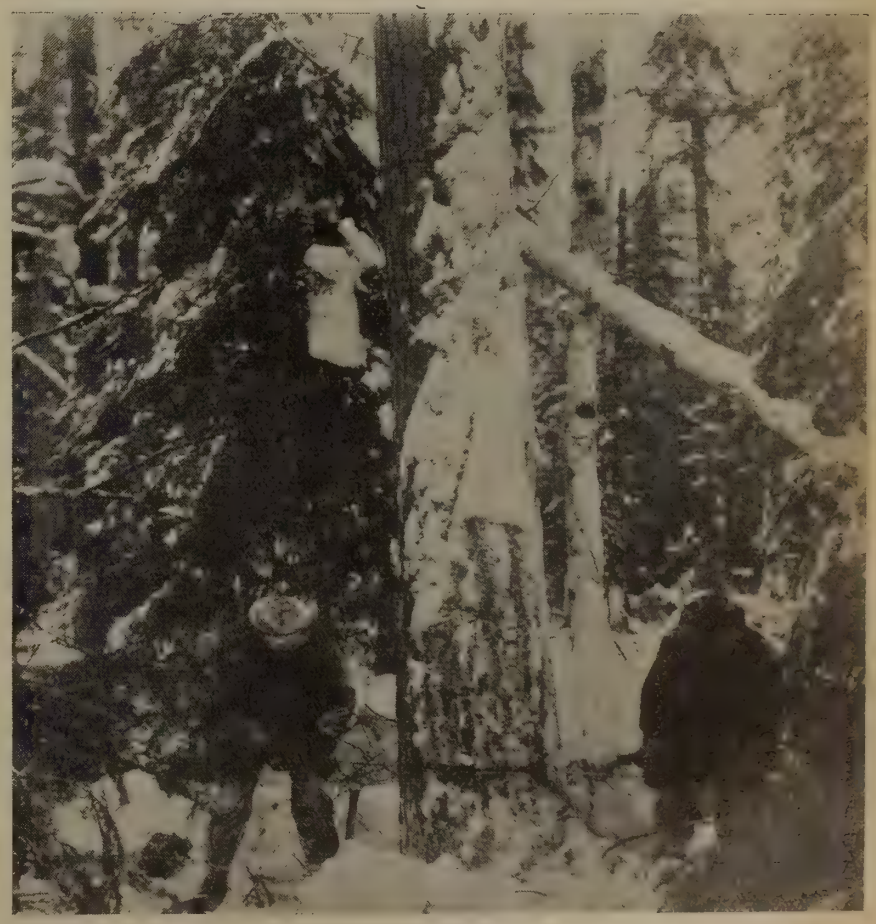
Tanning extracts are made mostly from the bark of oak and hemlock. Turpentine comes from woods possessing necessary resinous content. In fact, practically every wood possesses important by-product possibilities that may be greatly increased by chemical experts.

As chemical investigations advance, and new uses are found for wood waste, the percentage of waste will be steadily cut down.

Sudden Death of Mr. James Sparling

James Sparling, who was a prominent resident of Meaford for 54 years, where he operated a planing mill and retail lumber yard, as well as carried on a building and contracting business, died very suddenly at his place of business recently. He was a leading Mason and a life-long member of the Conservative party. Mr. Sparling took a great interest in the work of the Ontario Retail Lumber Dealers' Association and was one of those in attendance at the last annual gathering in Hamilton.

The late Mr. Sparling was a son of the late Thomas Sparling and was born in the county of Limerick, Ireland, in 1847, and came to Canada with his parents a year later. The family first located in Euphrasia township near Epping and later moved to Rocklyn, where a large family was reared and fitted for the many pursuits in which they are now and have been engaged. The subject of this sketch entered the planing mill of Mr. J. J. Johnston as an apprentice some fifty-nine years ago and from 1876 to 1888 was a partner with the late David McCann in the planing mill business. Since that time Mr. Sparling conducted the business on his own account and was most successful from year to year. In 1880 the late Mr. Sparling was married to Miss Nellie Mooney, who survives with a family of three daughters and one son. He is also survived by six brothers and one sister.



Felling a great Norway pine at one of the camps operated by Eastern Lands Department, Canadian National Railways, near Foleyet, Ont.

Performance of Certain Culled Acre

Dr. Howe Addresses Members of Timberlands Section at Recent Gathering Held in Toronto

Dr. C. D. Howe,
Faculty of Forestry, University of Toronto

Gentlemen, we have entered into a detailed analysis of the conditions, the life history as it were, of an area, in order to present to you in terms of growth and reproduction the performance of a certain culled acre. Now, let us briefly restate this performance:

First, the production of at least 2,500 feet of white pine lumber from five trees, all originally larger than 20 inches in diameter and the failure of white pine to reproduce itself, since not even a seedling can now be found on the area.

Second, the production of at least 6.5 cords of spruce pulpwood in two cuttings and the probable failure ever in repeating this performance due to the depletion of the growing stock as the result of the logging operations, the absence of a proper gradation of diameter classes among the smaller trees, and the absence of adequate reproduction under the present forest conditions. To this also should be added the influence of the over-shading hardwoods in reducing the potential capital stock by suppressing and stopping down the growth rate among the smaller diameter classes.

Third, the production of 2.5 cords of balsam pulpwood and the accretion of a still larger crop of 3.5 cords in 24 years after the cutting. This statement must always be followed by the qualification that no one knows the rapidity with which the diseases attacking balsam advance and hence there can be no dependence upon the future in respect to this species.

Now, gentlemen, I am sure that you will agree with me in saying that considering the treatment this acre has received, it has done quite well. Its chief lack has been intelligent direction and it is not responsible for that. With such direction I believe it could be recuperated and made even to surpass its past performance. Since this acre fairly represents the conditions in a certain locality, I believe recuperative methods could be applied on a large scale. You know better than I that the cost of getting wood to the mill is increasing each year, due not entirely to increased cost of labor and supplies, but also to increased distance of transportation. The cost of labor and materials, even the unit cost of transportation, may and very likely will decrease, but you know, again better than I, that the distance of transportation for your wood will increase in the future, unless you use substitutes for spruce or unless you pick up your mills and carry them far to the northward—and even then you may be disappointed in the quantity of readily available supply. The increasing distance of transportation will keep up the cost of production, and the time will soon come, if it has not already arrived, when it will be profitable for you to apply intelligence in directing the growing power and the reproductive power now aimlessly expressing itself on the much culled pulpwood lands that lie relatively near your mills.

Much could be accomplished by the utilization of the hardwoods. Present prices already permit this in certain localities and owing to the untiring efforts of one of your members the use of hardwoods, especially yellow birch, in considerable amount for groundwood pulp is a probable development of the near future. The commercial possibilities of poplar and paper birch are also developing.

The experiments of the Commission of Conservation already indicate that the removal of the hardwoods stimulates the development of the young spruce and balsam beneath. The 63 spruce trees and the 142 balsam trees 1 inch in diameter, not to mention the 500 spruce seedlings and the 3,500 balsam seedlings on our representative acre, form a potential commercial stand, if the conditions at present checking their growth were removed and they were allowed the freedom to carry on normal development.

The companies you represent have employed the highest order of intelligence to increase to quantity and quality of the mill production. As you know, this effort has been very profitable. All this time the source of the raw material has been neglected. I believe the time has come when it would be profitable for your companies to employ intelligence in the production of the raw material.

The Log Supply, Ltd., Montreal, P.Q., have been authorized by supplementary letters patent to increase their capital from $50,000 to the sum of $4,000,000.

Getting Better Class of Lumberjacks

D. H. Haight, of Haight & Dickson, lumbermen of Sudbury, was in Toronto recently on his way to Glen's Falls, N. Y., where he spent a few days on business.

Mr. Haight reports that there is an abundance of men for the lumber camps of the north and that production will be considerably curtailed. Wages, which were $75.00 a month, are now being reduced to $55.00 and even less. Men are more anxious to retain their positions, and the result is that, owing to the number offering, logging concerns are securing a better class of labor.

During the war many boys, from 15 years of age and up, were pressed into service, or rather pressed themselves into service, due to the shortage of help, and succeeded in getting as high as $75.00 a month. To-day these striplings are not engaged and the lumberman is able to secure more experienced and efficient workmen. Everything is being conducted on a more stable basis than for some time past. Haight & Dickson will take out a considerable quantity of ties.

It is not every man that will work in the bush and some of those sent up from the cities and towns have no conception of what they are up against. Recently about 100 men reached Foleyet on the C. N. R., thinking that there would be numerous openings in the woods. They were sent back, as they arrived with thin clothes and light footwear and were not at all equipped for a rugged experience such as spending the winter in the camps. The arrivals had no money and naturally the railway had to take them back to the point from which they were shipped.

Lumbermen Will Build Summer Homes

W. H. Johnston, of Pefferlaw, Ont., spent a few days in Toronto recently, undergoing treatment for neuritis, and is greatly improved. Mr. Johnston, who is in the lumber business, with which his forebears have been connected for 100 years, reports having enjoyed a successful season. He is getting out quite a large quantity of cedar for the coming year.

Some time ago he bought 200 acres of land at Port Bolster, which is only a short distance from Pefferlaw, on Lake Simcoe. The property has 3,000 feet of lake frontage, and the proprietor will erect several summer cottages at this popular resort, which will be sold or leased during 1921.

Mr. Johnston has also added a motor truck to his equipment and is now delivering lumber to farmers and other consumers as far as 30 miles away. He has been enabled to give much better service and has a trailer which is hitched to the truck so that he can carry material up to 24 feet in length. He believes that the investment has been one worth while in every way.

Lumber Operators Report Help Abundant

George Gordon & Co., of Cache Bay, report that they have three camps in operation this season and also a number of jobbers who are taking out logs for them. The quantity cut will be less than in previous years. Labor at the present time is plentiful in and around Cache Bay.

W. R. Beatty, of Pembroke, secretary of the Colonial Lumber Co., was in Toronto recently and states that help is plentiful in the bush and his company are operating in all six camps this winter, which is the same number as last year. The quantity of timber taken out will equal that of last season. All last season's cut of the Pembroke Lumber Co. has been sold and the outlook for next year is considered promising, so far as the Pembroke district is concerned.

Billions for Construction in 1921

Early resumption of home building and other forms of construction is assured if contemplated building projects reported by the F. W. Dodge Company may be taken as a criterion for the coming year. Reports from this company show that contemplated building projects for the territory north of the Ohio river and east of the Missouri will probably reach the tremendous amount of $4,800,000,000, which, under normal conditions, would indicate actual construction during 1921 of approximately $3,200,000,000.

The low lumber market now prevailing paves the way for a big reduction in building costs. Thousands upon thousands of homes, so badly needed, will be built under these conditions. This will necessarily call upon thousands of men from all trades for the production of building materials.

Such demands will naturally lead to steady production and universal employment which in turn will make for better business activity and general prosperity.

A message from Edmonton states that according to Mr. L. S. Breadner, of the Canadian Air Board, the work initiated last summer in connection with forestry patrols and aerial photography will be carried out on more complete lines. Arrangements are being made for a number of landing stations in the southern part of the province.

Modern Display Facilities of Progressive Lumber Firm

In the new display room of a modern lumber store at Pittsburg, Kas., where prospective customers and potential friends from the city, county and even from beyond that boundary had, for several weeks, been coming to bring their friends, the manager was talking.

The speaker was F. W. Foresman, manager of The Long-Bell Lumber Company's interests at Pittsburg. "I am convinced," he declared, "this display room and its equipment will help to develop sales more readily. Take, for instance, the doors."

He pointed to what is perhaps the most striking wall of this harmoniously arranged sales and display room. Seven full sized doors, cased in, are equipped with various types of hinges, knobs, and locks. The casing, stops and base are finished in egg shell ivory color. Really, in the seven openings there are fourteen doors, for in the background these open doors are seen in various other finishes. Displayed to distinct advantage and in the smallest space possible for a good showing of stock, many designs, fully equipped with hardware, were utilized.

"With these finishes on display," the manager continued, "the customer can see just how a door will look as finished in a certain color. A number of women customers have picked from this display the doors they wanted in their homes, and have specified the finish should be the same as shown in this exhibit.

"Customers bring their painters here to show them how they want their doors finished. Carpenters find they can make good use of the display room. Customers themselves have found it to their liking, and want their friends to see it. An implement dealer in town is so enthused about it that he brings his friends to show them the display."

The other day an out-of-town dealer brought a customer to Pittsburg, and from this exhibit sold a bill of doors. The company at this moniously arranged sales and display room. Seven full sized doors, mill work and roofing. In fact, after the plant at Pittsburg had been entirely rebuilt into one of the most up-to-date yards in Southeastern Kansas to take care of its large retail and wholesale trade, the latter end of the business grew to such proportions that more room was needed. A two-storey and basement building, 70x100 feet, was added for use as a warehouse.

Satisfied that a part of the space in the new building should be set apart for a modern display room, the manager made a thorough study of the subject and planned every detail so carefully that the result is a remarkable combination of good taste, color harmony and inviting atmosphere, with, of course, a wide range of material on display suggesting various designs of many important items entering into home building and decorating. In spite of the fact that the items include such stock as doors, screen doors, windows, colonnades, cupboard doors, window seats—even including a disappearing ironing board—and that the walls are finished in various colors, the appearance of the room as a whole so harmonizes as to be strikingly attractive.

Only the most careful planning and placing of such a wide variety of stock would prevent a badly overcrowded appearance. But the seemingly impossible was accomplished. The most pleasing results imaginable have been obtained, the most remarkable of all being the retention of a distinct home atmosphere in the midst of this modern salesroom.

A comfortable window seat, finished in mahogany, is built in below the windows. A hinged lid allows for a variety of uses for this box seat—as a cover for a radiator, a cold air intake for the furnace, for storage space, or, if used on the second floor, as the opening for a clothes chute.

Prominent on the north wall is a full size square-finish type of colonnade, with a desk and cupboard, with paneled wood doors, on one side, and a book case with glass doors on the other. The colonnade is finished in antique oak. Within the colonnade a two-panel door, finished in mahogany, opens into a 2x6 closet containing a Murphy In-A-Door bed.

Two modern kitchen necessities, a built-in ironing board and a convenient broom closet are also in the north wall. The doors to these openings are of the one-panel type, and doors, woodwork and trim are finished in white enamel.

Two fancy cupboard doors are shown at the end of the main door display. Above, seven screen doors—18"x48", designs shown in the warehouse catalog—a cupboard door and two miniature windows, assembled in Anderson White Pine frames, are shown. The screen doors are finished in ash gray, light oak, natural, golden oak, mahogany and dark oak. The one-panel cupboard door is finished in light oak. The Queen Anne type windows with one-light below and divided top lights are assembled in Anderson White Pine frames.

This display room is a revelation in its harmonious simplicity, its satisfying appearance and its convenience and comfort, to home builders and home owners who have seen it, and to dealers in that territory who have seen it, and to dealers in that territory who may now use this sales room for their customers.

In the most comfortable surroundings, prospective customers may look over the building plans which are at their disposal in this room, and may see the important details of the interior finished and built-in construction of their proposed homes.

Pulpwood and Its Varied Activities

Canadian Spruce Makes Best Pulpwood

A largely attended meeting of the Ottawa Foresters' Club was held recently in the office of the Chief Fire Inspector of the Railway Commission.

Mr. E. F. McCarthy, professor of Forestry in Syracuse University, New York state, was the first speaker. Prof. McCarthy has been engaged during the past season in conducting a working plan survey on the pulp limits of the Spanish River Company, near Sault Ste. Marie, Algoma. This survey was under the direction of the Commission of Conservation, in pursuance of their research investigations into problems affecting the pulp and paper industry of Canada.

The speaker compared the forest conditions found in Algoma with those obtaining in the Adirondacks, and declared that the relative freedom from shade-enduring species (hardwoods) in the former country, would greatly simplify the work of managing these forests to secure a sustained yield of pulpwood. He declared the Canadian white spruce to be easily the best pulpwood tree in America—much more rapid-growing than the red spruce and more hardy than the imported Norway.

The presence of Mr. Wm. T. Cox, Chief Forester of Minnesota, lent added interest to the meeting. He outlined some of the chief problems to contend with in his state and chiefly that of protecting the forests from fire. As a result of careful patrol organization and wise expenditure for lookout towers, etc., Mr. Cox now feels confident that although the starting of fires and a certain amount of loss can never be wholly prevented, Minnesota will never again be swept by another such appalling conflagration as for instance the Hinchley or the Cloquet fire.

The addresses were followed by a general discussion in which the director of the Dominion Forest Service, and others, took part.

Northern Settlers Want Permit System Restored

The settlers of Northern Ontario were recently represented by a deputation of over one hundred who waited upon the provincial government in Toronto and asked for many reforms. Among the requests was the restoration of the permit system in the cutting of pulpwood. Recently the provincial authorities abolished permits and the settlers contend that the small pulpwood contractor and they have been hit the hardest as the present no permit plan is tending to throw all timbering rights into the hands of big operators.

Hon. Beniah Bowman, Minister of Lands and Forests, defended the elimination of the permit system. He admitted that in some cases it might hit the small operator or the settler who wanted to cut timber on a small scale, but the Government had to look at the matter from the standpoint of the interest of the whole province. He maintained that by doing away with permits the province was now getting considerably more for the timber sold. He did not think the conditions imposed were burdensome on the small operator. The minister was quite concerned by the attack upon the big interests. The north country needed the big industries, he maintained.

A delegate interrupted him to declare that the Rainy River district would be better off without the Backus mill. They could ship their pulpwood to Minnesota if they had the cars. The minister pointed out that there was a big industry located just across the border, but in other districts this was not true and the big industry was needed.

The argument against the Backus deal was presented by F. E. Songhurst, of Rainy River, after W. Forsythe had urged the Government to establish a pulp and paper industry of its own as a means of ensuring a fair price to settlers for their pulpwood. Mr. Forsythe also advocated the appointment by the Government of an official to measure all pulpwood as it entered the mills. This, he claimed, would remove much of the dissatisfaction of settlers who now found that they were allowed for about two cords per car less than their own measurement apparently entitled them to.

Mr. Songhurst declared that the Backus interests had not dealt fairly with the settlers.

"Last year," he said, "we were paid a price of $8 per cord, f.o.b. shipping points. Our pulpwood is supposed to be of better quality than that in other places; yet this same concern, south of the boundary in Minnesota, paid $17.50 per cord, f.o.b. shipping points. There is decidedly too much of a spread where there is no competition. Pulpwood can be shipped into northern Minnesota or to the mills of Wisconsin, and Backus has to pay a higher price to get a supply."

Last fall, according to Mr. Songhurst, Backus agents went through the country offering $16 per double cord for pulpwood and trying to get the farmers to sign contracts to deliver at that price. Another firm came into the field, however, and as a result the price ruling now is $26 per cord, a difference of $10 per double cord.

"We want an investigation as to whether we are getting a fair price for our product," he continued, pointing out that a ton of pulpwood was supposed to produce a ton of pulp. For that ton of its product, said Mr. Songhurst, the mill received $160. That, he maintained, was too much of a spread.

"We are strongly opposed to this same concern getting the English River limit, as projected at the present time," he said. "I understand the same concern more or less controls the water power in that country. There is no reason why that same limit could not be sold to small concerns and give bigger returns through the small contractor to the settler." The northerners, he declared in closing, were decidedly opposed to putting monopolies in the hands of the great timber barons.

The objections to the Government's policy in wiping out timber permits were strongly presented by E. T. Ross of Port Arthur and the chairman of the delegation, A. R. Ascough. The latter stated that he had never been a contractor but spoke for those numerous settlers who were occupying farms from which the timber had been burned off. These men in the winter had to seek employment off their farms and in the past they had been able to get permits for cutting timber on small limits. Some of these men had put in improvements believing that they would get their permits from year to year. Now all the work they had done in improving the limits had been taken away from them for they were not able to bid against their improvements in competition with the bigger interests. He was absolutely convinced that the ultimate effect of the new policy would be to centre all timber rights in the hands of a comparatively few big concerns.

Spruce Falls is Scene of Activity

The charter granted some time ago to the Spruce Falls Pulp & Paper Co., Limited, has been cancelled. The concern is now known as the "Spruce Falls Company," and a model town is being laid out on what is known as "Spruce Falls," which was formerly Kapuskasing. 1,200 men are at work at this point and the new pulp mill is being rushed to completion. Thousands of cords of pulpwood are being cut in the woods. It is expected the first unit of the pulp plant will be in operation in May next. A small power plant is now being operated at Spruce Falls, and although in its infancy, the village already has electric light. The cutting of wood is being done in one block instead of small batches and the bush will be burned and the area reforested as it is not specially adaptable for agriculture.

Premier Drury, who recently visited Spruce Falls, which town is being laid out by Ontario Government engineers, is impressed with the courageous and cheerful manner in which the French-Canadian goes into the woods and builds his home. Many of these families are now living comfortably and making good, carrying out their little contracts of pulpwood.

Only Fifty Years' Supply of Pulpwood

Speaking before the Woodlands Section of the Canadian Pulp & Paper Association recently, Dr. C. D. Howe of the Faculty of Forestry, University of Toronto, took as his subject, "The Performance of a Few Culled Acres," and added that Canada's pulpwood under the present commercial conditions could not last more than fifty years. However, in accessible spots in British Columbia there still remain unlimited supplies if some means were found to get the product to the market. He held that culling forest acreage and stimulating growth are better than replanting. He could not say that there was any probability of wood being any cheaper; in fact it would tend to become dearer as supplies have to be brought from points farther and farther away.

The Laurentide Co. of Grand Mere, Que., it was stated, was now experimenting with hardwood for pulp with fair results. If this proved satisfactory, it would mean the throwing open of a large area of hardwood for the use of the pulp and paper companies of the Dominion.

Brigadier-General White, of the Riordon Co., Montreal. said that it took forty years or more for a spruce tree to mature to be of use commercially.

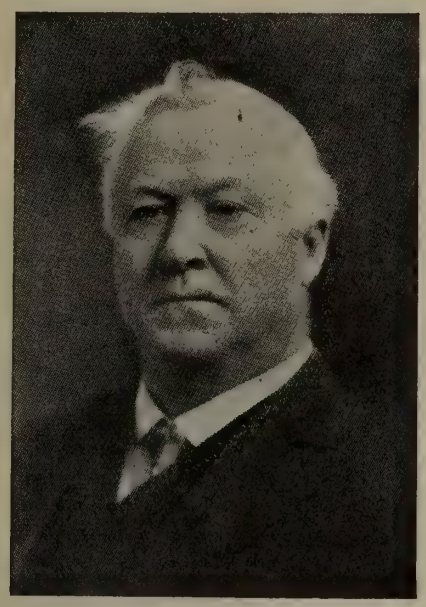
Mr. J. H. Graeslund, a Swedish forestry expert, spoke on Swedish forestry work. He said that, while Sweden was now exporting some pulp to the United States, owing to the favorable exchange situation

and to the big demand, Sweden and Canada had their own spheres, the one in Europe and the other in Canada, and it was not likely that they would become active competitors. Through the system of reforestation used in Sweden the forests were kept perpetuated, but this did not allow of any increase in cutting. Swedish law forced manufacturers found guilty of wanton damage to replant or to reestablish the growth.

Brompton Secures Many Pulpwood Acres

The Brompton Pulp & Paper Co., of East Angus, Que., has acquired extensive pulpwood limits in the Lake St. John district, whereby 634 square miles or 405,760 acres will be added to the already considerable holdings of the enterprise. It is said that the latest acquisition is a very valuable one, will give the company all the pulpwood it will require for an indefinite number of years, and will place the organization in a more prominent position in the pulp and paper industry of Canada.

Prior to the most recent acquisition, Brompton owned or controlled by lease timber limits of 311,763 acres in the St. Francis River district, so that its holdings have been more than doubled with the addition of the 405,760 acres, and now total 717,528 acres. It was estimated several months ago that with outside purchases the wood reserves of the company were considered sufficient to ensure a supply for forty years' operation at its present capacity, a period which, it would seem, has been extended indefinitely by the Lake St. John addition.



F. N. McCrea, M.P., Sherbrooke, Que.

It has been known for some time past that the president of the company, F. N. McCrea, M.P., has been giving his personal attention to the matter of increasing Brompton's pulpwood holdings, and it is presumed that the closing of the recent negotiations was effected only after a personal inspection of the area involved.

Want Diameter Limit Reduced in Quebec

A committee formed of delegates of a number of pulp and paper and timber companies of the province of Quebec have been in consultation with Premier Taschereau and Hon. H. Mercier, Minister of Lands and Forests, in connection with increases recently made by the Provincial Government in the stumpage rates, and with a view to requesting a reduction of the minimum diameter fixed by the Government for cutting timber, particularly in the case of spruce, fir and pine trees.

The companies represented by the delegates have a combined capital in excess of $20,000,000.

A further matter brought up by the delegation was the reiteration of the request, already formulated by them, for the creation of a new forest reserve and the maintenance of those presently in existence.

Premier Taschereau replied that he would submit their requests to the Cabinet.

Special permission has been given in certain cases to cut timber below the diameter fixed, but the companies are not satisfied with this and want the Provincial Government to reduce the diameter from 10 to 7 inches in all cases.

Companies represented on the delegation included the E. B. Eddy Company, Riordon Company, J. R. Booth, McLachlin Bros. and James McLaren Company.

The Pulpwood Outlook in the East

Speaking of pulpwood production and prices in New Brunswick, a leading purchaser recently stated: "Conditions with us are no doubt quite similar to that prevailing elsewhere this season. While f.o.b. prices started out at from $16.00 to $18.00 per cord at the first of the season, they kept on soaring and soaring until finally the ridiculous price of $26.00 was being offered. Suddenly the bottom fell out of the entire market and practically no one is buying to-day.

"The demand was artificial and abnormal. Ordinary wood from New Brunswick was sent to the Maine and New York mills, and much to our surprise, a heavy call sprang up from the Ontario and Quebec mills. Buyers from the latter mills swept over the province, offering almost any price for spot wood. The result was that people with whom we had contracted, immediately asked and kept insisting on having their contracts raised, with the result that the season has been somewhat uncomfortable in this respect.

"The recent drop in prices has made matters more satisfactory for us. Very little, if any, spot wood was or can be delivered for the reason that little of this season's peeling can be obtained and delivered at the railways until the arrival of snow. As snow cannot be depended on until the end of December, a comparatively small percentage of pulpwood was obtained by the Quebec and Ontario mills, but a considerable quantity will be delivered this winter under contracts made some time ago. Quite a number of the larger operators installed rossing machines as a result of the prevailing high prices. The drop has driven some men out of business, but quite a few are going ahead under a possibly advantageous contract entered into before the drop."

Annual Pulp and Paper Output in Canada

Canadian pulp and paper resources, the tremendous progress being made in their development, formed a feature of an interesting address delivered by C. Price Green, Commissioner Industrial and Resources Department, Canadian National Railways, Toronto, before the Montreal Publicity Association.

"To-day," said Mr. Green, "the United States is mainly dependent upon Canada for its supply of paper making material, its resources, particularly in the East, being practically exhausted, illustrated by the fact that last year some of its mills were using two and three inch wood. The demand of the United States is heavy, as they consume one-half of the world's annual production of white paper. Canada is supplying at least 55 per cent. of this demand which amounts to the equivalent of five and a half million cords of pulpwood a year; an enormous quantity, which if made into a pile of four foot wood, four feet high would stretch nine thousand miles, or more than twice across the continent.

"It may interest you to know how Canada's pulp and paper industry has grown to a point where it can meet this demand. In 1890 it only exported to the extent of $120; to-day there are $260 millions invested in pulp and paper and the production this year will exceed $160 millions in value; our exports will be in the vicinity of $150 millions, of which the U. S. will receive 80 per cent., and in addition to this over a million cords of wood to supply their mills. It is interesting to note that the exports for the six months ending September, of $87 millions, are double those of 1919, also that our production is now more than double that of Sweden, Norway and Finland combined.

"The pulp forests of Canada are all more or less tributary to the lines of the Canadian National Railways, and it is estimated that in Ontario and Quebec alone there are 450 million cords, not counting the wooded areas, in the North at present more or less inaccessible. These forests will supply the present output of Canada for seventy years; in British Columbia there is sufficient wood to last at least sixty-five years, or a total of 135 years. Putting the length of time it takes to grow a spruce tree to commercial size at one hundred years, if a sane policy of cutting and forest preservation is followed, Canada will be able to carry on in perpetuity. Mark well the proviso, for the forest has many enemies, fire, wind, the bud worm and other enemies take a heavy toll.

"Canada has the largest forest area within the British Empire, and British Columbia contains the most valuable standing timber, amounting to 366 billion feet of saw material.

"To get a better perspective of the value of our forests and the danger of exhaustion through export, it may be pointed out that our total supply would only meet the total demand of the U. S. for about fifteen years. The United States is an extravagant user of wood, their per capita consumption being 350 feet against Europe's 150 feet per annum. For all purposes they consume 100 billion feet a year, which is equivalent to a pile of sawn wood 4 feet high and 4 feet wide, 98,500 miles long, or about four times around the Globe, translated into terms of cordwood it would go ten times around the world. They are facing a timber famine now, and unless something radical is done their supply will be totally exhausted in fifty years. Canada on the other hand has sufficient to last her in perpetuity if she would confine herself to her home market, or carry out methods of reforestation.

Personal Paragraphs of Interest

H. Bourgouin, wholesale lumber dealer, Montreal, has left for a trip to Europe.

Joseph Ouellette, lumber manufacturer of Mont-Laurier, Que., was in Toronto recently calling upon the trade.

A. C. Manbert of the Canadian General Lumber Co., Toronto, and his son spent the Christmas holidays in Washington, D.C.

Edward Clark, of Edward Clark & Sons, Toronto, left recently for California, where he will spend the winter months at Santiago.

John Hall, of Toronto, Canadian representative of the W. M. Ritter Lumber Co., of Columbus, Ohio, is spending a holiday in Virginia, Kentucky and other states.

J. A. McBean, of McBean & Verrall, wholesale lumber dealers, Toronto, left recently for Los Angeles, Cal., where he will spend three months. He was accompanied by Mrs. McBean.

Sam McBride, wholesale lumber merchant of Toronto, is again a candidate for the mayoralty of the Queen City. Mr. McBride was for many years a member of the Board of Control.

Mr. Fraser, of Hogan & Fraser, retail lumber dealers, Spencerville, Ont., has been laid up for some time with rheumatism and unable to attend to business. According to the latest reports, he is improving.

William Charles Munro, aged 63, a resident of Hull, Que., passed away recently. He was employed for the past 20 years as a lumber inspector for the firm of Gilmour and Hughson, and came from Quebec twenty-one years ago to live in Hull.

L. D. Barclay of the Central Canada Lumber Co., Toronto, left recently on a visit to his parents in Edmonton, and will also visit the Pacific Coast before his return. He intends establishing connections in the interest of the Central Canada Lumber Co. to handle B. C. forest products in the east.

Alex. McNair, of Vancouver, passed away recently. He was one of the pioneer timber merchants of the Coast, where he was a well-known figure for 35 years. Mr. McNair had been suffering for some time from stomach trouble, which caused his death. He leaves a wife, one sister and one brother.

W. D. Woodruff, one of the best known manufacturers of St. Catharines and president and manager for many years of the Lincoln Paper Co., died recently from apoplexy. He was 59 years of age and had spent his whole life in the paper business. Mr. Woodruff held many other important positions during his career.

H. Boultbee, secretary of the Lumbermen's Credit Bureau, Toronto, will visit Hamilton on January 7th, where he will deliver an address before the Hamilton Association of Canadian Building and Construction Industries, who intend forming a local credit bureau in which the lumbermen and supply firms are uniting.

W. A. Harris, for eleven years with the R. Laidlaw Lumber Co., and during the past five years manager of the north yard, 117 Merton St., has taken a position on the selling staff of A. N. Dudley, wholesale lumber merchant, Stair Building, Toronto. Joseph Cadenhead, late manager of the Spadina yard, has succeeded Mr. Harris at the Merton St. yard, and Wm. Wallace has now charge of the Laidlaw yard on Spadina Ave., Toronto.

Walter T. Piggott, of the Piggott Lumber Co., Windsor, Ont., was united in the bonds of matrimony on December 11th to Miss Josephine Smith, daughter of Mr. and Mrs. Angus McD. Smith. The ceremony took place at Algomac, Mich. Mr. Piggott and bride will be "at home" at Sandwich, Ont., after January 1st. Many friends will extend congratulations and wish the popular retail lumberman and his good lady long life and prosperity.

The Dominion Forest Products Co., which is the Ontario selling organization of the Dominion Lumber Sales, Limited, Vancouver, has appointed J. C. Clews as the salesman of the organization. Mr. Clews was lately with the MacDonald Lumber Co. and is well known to the trade. He succeeds D. Williams, who is now representing a number of B. C. mills in Toronto. The office of the Dominion Forest Products Co. is at 167 Yonge St., Toronto.

James Sparling, who was a prominent resident of Meaford for 54 years, where he operated a planing mill and retail lumber yard, as well as carried on a building and contracting business, died very suddenly at his place of business recently. He was a leading Mason and a life-long member of the Conservative party. Mr. Sparling took a great interest in the work of the Ontario Retail Lumber Dealers' Association and was one of those in attendance at the last annual gathering in Hamilton.

E. C. Parsons, of Toronto, who for the past two years has been on the selling staff of the Canadian Western Lumber Co., was married on Christmas Day to Miss Lillian Mandly, daughter of Mr. and Mrs. John S. Mandly of Toronto, late of Newcastle-under-Lyne, Staffordshire, England. Mr. Parsons, who is acting Eastern sales manager of the Canadian Western Company, and bride are receiving the congratulations of a host of friends. They have taken up residence at 214 Indian Grove, Toronto.

Ontario Retailers Meet February 15-16

The fourth annual meeting of the Ontario Retail Lumber Dealers' Association will be held in Toronto on Tuesday and Wednesday, February 15th and 16th, at the Hotel Carls-Rite, corner Front and Simcoe Streets.

Every arrangement is being made for the comfort and convenience of the delegates, and it is expected there will be a record attendance.

An interesting programme is being drawn up and many matters of importance will come up for consideration. Last year the convention was held in Hamilton and was pleasant and profitable from every standpoint, and it is believed that this year's gathering will exceed in interest and enthusiasm any meeting that has yet taken place.

January and February will be months of many annual meetings, so far as the lumbermen are concerned.

The Lumbermen's Section of the Board of Trade, of which A. C. Manbert is chairman, will meet on Friday, January 7th, at 2 p.m., for election of officers and other business.

Then, there is the Thirteenth Annual Meeting of the Canadian Lumbermen's Association, which will be held at the Chateau Laurier, Ottawa, on Wednesday and Thursday, January 12th and 13th.

The Lumbermen's Credit Bureau will convene for the election of officers in the Board of Trade Building, Toronto, Friday afternoon, January 14th, at 2 o'clock.

Eastern Lumber Trade is Very Quiet

The last few weeks have been the most quiet times in the lumber trade at St. John for many years. No lumber whatever is being loaded here and together with a falling off in the local building, a complete stagnation has taken place. Even when reductions may be had, it seems to have no influence in putting through a trade.

Large stocks of deals are certainly being carried both British and American sizes, there being probably in the vicinity of one hundred million piled in and near St. John, but it is held largely by the English brokers at St. John, and will not be sacrificed.

Prices at the present time show no change over two weeks ago. If anything, they are a little weaker. No one as yet has forecasted what will happen as to price and trade for the coming year, but it is felt that in the early part of 1921 a decided change for the better will show itself, and the lumber trade will improve. It is anticipated that deals will be worth at least $35.00 per M for next season, although as yet no one cares to buy for any speculative purpose, preferring to hang on to what they have rather than sell at a loss.

The mills at St. John and vicinity are all closed for the season and will remain so until opening of navigation, about May 1, 1921.

Men for the woods are very plentiful and wages are less than any time during 1920, and will no doubt go lower.

Very little logging is being carried on near St. John. Prices for logging are less than anticipated, but are higher than in 1919-1920. Good work is being done in the woods and more logs are being put up than was the case a year ago in camps where the same number of men were employed under the same conditions.

The prices of local lumber for retail purposes have shown some slight reduction but as a whole no drastic reductions have been made.

The retail trade is practically at a standstill and will, no doubt, remain so.

Big Pulp Propositions Progressing

The Whalen Pulp and Paper Co., Ltd., operating on the Pacific coast, have engaged the services of the Reliance Mill and Trading Corporation of New York to take charge of the manufacturing end of the business.

John Ball, who is president of the Reliance Corporation, was formerly with Price Bros. & Co., Quebec, and Vice-president E. M. Waite was formerly pulp mill manager of the International Paper Co. and also of the Great Northern Paper Co. Both are to take personal charge of the operations of the Whalen Company.

Plans are practically completed for establishing a pulp and paper mill at Prince George to cost over $6,000,000, by a number of eastern capitalists who have been looking over the ground, including Angus McLean of the Bathurst, N.B., Lumber Company; Frank P. Jones, president of the Canada Cement Company, and M. F. Preish, president of the Haynes Lumber Co., North Tonawanda, N.Y.

Mr. McLean declared the plant would be one of the most modern in Canada and would employ a thousand men. The coast was found exceptionally suitable for the industry. Three kinds of paper can be made, including the finest bond. The plant will cover 200 acres.

Lumbermen Hold Big Christmas Fete

Jolly Gathering in Which Song, Speech and Story Enliven the Yule-tide Proceedings

The monthly dinner of the Wholesale Lumber Dealers' Association, which was held at the Albany Club, Toronto, on Friday, December 17th, was well attended and proved to be a most enjoyable and happy occasion. All business was eschewed and the evening was given over to the Yuletide spirit, while good fellowship and merriment reigned supreme. The Christmas tree at one end of the gaily-decorated room was artistically ornamented and surrounding it were numerous gifts brought by the lumbermen. The presents were afterwards sent to the Infants' Home and Infirmary and other institutions looking after the welfare, comfort and training of children.

A. C. Manbert made a graceful chairman, and everything passed off with much eclat. Duke Johnston was the energetic master of ceremonies and kept things on the move. After justice had been done to the numerous good things, an impromptu programme was carried out. Every man present had to make a speech, sing a song or tell a story, and in case he failed in any of these three, he was promptly "fined" the levies going to the Infants' Home. During the evening a substantial grant was voted by the members of the association to this institution, in which a number of the members, including Secretary Horace Boultbee, take a deep interest. Several members were "fined" two or three times for "various offences," and it was difficult to steer clear of the many assessments. However, all was taken in good part and during the evening a handsome sum was raised for the fund.

Among the visitors from a distance was C. O. Maus, who represents the Hyde Lumber Co., South Bend, Ind. He conveyed greetings from the sister republic.

Mr. Manbert read an original and humorous poem, in which appreciative reference was made to the activities of various members of the association, or their idiosyncracies playfully touched upon. His "effusion" was received with much appreciation.

A large number of visitors were present and all joined heartily in the festivities. Many choruses were sung, many Yuletide greetings exchanged, many sincere wishes made for the welfare and prosperity of all during 1921.

Although trade in the lumber line has been quiet for several weeks, there was not a pessimist in the gathering, and although the subject of business was tabooed, one or two good stories were told, showing that even those who are the victims, may laugh at their own predicament. One leading representative said that a salesman had walked into his office last week and declared that he had taken orders for fifteen cars of lumber.

"I do not believe you," he rejoined; "I do not think there is that much busines in the whole of Ontario."

"Well, I took orders for fifteen cars last week," persisted the salesman, "and I can prove it." Reaching in his pocket, he exclaimed, "Here are the cancellations."

Another anecdote was that a western Ontario retailer had telegraphed to a large Toronto firm, saying, "Cancel my order at once." The wholesaler wired back, "Can't do it. You must take your turn."

The Christmas celebration of the Wholesale Lumber Dealers' Association was in every respect a delightful social affair, and was the first effort of its kind conducted by the association. Needless to add, it will not likely be the last.

Retailers Will Combat Mail Order Concerns

The South-Western Ontario Retail Lumber Dealers' Association held a special sitting in the Chamber of Commerce rooms at Chatham on Monday, December 20th, when a report was received from the special committee appointed, regarding the situation arising from mail order catalogues being conducted by a certain concern in Hamilton.

This committee, composed of E. C. Russell, Walkerville; J. C. Scofield, Windsor; John Wallace, London; and M. R. Bogart, Chatham, was chosen when the meeting was held in Windsor on November 22nd, to bring in suggestions.

The special bargain sheet was carefully considered, and the catalogue proper gone into carefully, and it was discovered that outside of a few old style doors and odd size sash they were in many cases higher than the legitimate dealers' prices, and that on a bill of any size the regular dealers could furnish material for less money and still charge regular yard prices. Owing to their aggressive mode of advertising the public are misled, and as the full purchase price is demanded in advance. the purchaser has no alternative but to accept the goods.

The dealers of the S. W. O. R. L. Association intend to push their own lines as vigorously and aggressively as possible, and will take effective means of combating the mail order evil. It has been found that no mail order concern is selling any cheaper than the local lumber merchant in his home town, and it is important that this matter be hammered home in the neighborhood in which the retailers do business.

Every effort will be made to push business and to prevent trade being diverted to other channels and the retail lumbermen will show that they are in a position, not only to give better service than the mail order and catalogue houses, but that they can duplicate the values in practically every instance, and, in several others, give more favorable prices.

That delays in building are not attributable to the holding of material by the lumber dealers, but to the scarcity of labor and not of lumber, was the contention voiced at a brief conference here of the Southwestern Ontario Lumber Dealers' Association.

Breezy Happenings from the East

Gordon G. Scott has resumed sawing operations in his mill on the St. John River. He is running it on a ten-hour day.

Frasers' large mill at Edmundston has made a reduction in time. Labor is very plentiful and wages have been lowered from $90 to $60 a month.

H. P. Webb, who did valuable work for the Department of Lands and Mines, has been appointed chief forester with the J. B. Snowball Lumber Company and has taken over his new duties.

L. S. Webb recently went to Spokane, Wash., as a representative of the department to attend a conference on conservation and forestry. He is specializing in airplane patrol and other modern methods applied to forestry.

Another well-known lumber merchant and importer, Andrew F. Learherbee, of Boston, recently passed away. He was well known to provincial lumbermen and dealt extensively in New Brunswick lumber.

The tug James Holly, owned by the firm of James Holly & Sons, lumber surveyors and towers, was badly damaged by fire a few days ago while towing rafts in the company's large boom at South Bay. The fire is thought to have started around the boiler.

A recent report from Newcastle says that recent thaw conditions are almost ideal for lumbering along the Miramichi. The Miramichi Lumber Company is the largest operator in that section, but is confining its efforts chiefly to pulpwood. The Partington Company is also getting out a large quantity of pulpwood this season.

Word comes from St. George that A. C. Grant has sold his interval property to the Press Pulp & Paper Co. It adjoins land already owned by the pulp concern and will be used by it next season. The organization has also purchased the slasher at Musquash and will install them in the mill at the Dewar site. The Gregory Lumber Company has sold its holdings on the Magaguadavic and its mill at Bonny River to the pulp company. It is rumored that other concerns along the river have also been approached. The Press Pulp and Paper Company has rigid laws of conservation, which it adheres to in New York and other places where the firm lumbers, and report says that it will introduce the same measures of conservation on the Magaguadavic.

S. H. White, one of the best known and most successful merchants and lumber operators in the province, died recently at his home in Sussex, N.B. He was a son of the late Charles T. White, who was the head of a great lumbering and shipping business for many years and whose operations along Apple river were very extensive. S. H. White took after his father in this line and his first venture was the purchase of the property of George J. Vaughan at Little Salmon River. In addition he also acquired the Talbot property at Alma, and that of J. A. Patterson on Canaan River. He also developed a water power, and erected and operated a mill at Rockville, in addition to working portable mills in the woods every winter. He was one of the most active and progressive business men in the Maritime provinces and news of his death was heard with keen regret. He is survived by four duaghters and four sons, as well as two brothers and two sisters.

All cruising parties of the Department of Lands and Mines have now returned to Fredericton after doing splendid work in the forests of New Brunswick. The last party to arrive had been operating at the headwaters of the Nepisiguit and Tobique rivers, but snow conditions called a halt to their proceedings. R. D. Jago was the chief of the party, which covered 536 square miles of territory. They entered the woods early last May and since that time did work that while not apparent to those unfamiliar with lumbering will be fully appreciated by those who value this great industry of New Brunswick. In addition to the cruising done by Mr. Jago and his party, G. L. Miller ran some 223 miles of lines between timber blocks.

Crown lands under lease to C. T. White & Sons of Sussex, N.B., and the J. B. Snowball Lumber Company of Chatham, were examined during the year on a co-operative basis between the department and the lessees.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber— —Positions Wanted & Vacant

Lumber Wanted

Wanted

Car Hardwood Lumber, inch and inch and half, seasoned Maple and Birch. Burr Mfg. Co., Orillia, Ont. 1

Wanted

TAMARAC—600 feet 2 x 8 and 600 feet 2 x 10 long lengths. Best grade only. State price and prompt shipment.

Muskoka Navigation Co., Gravenhurst, Ont. 1

Wanted

4 foot Body Hardwood by the cord for firewood purposes, in any quantity. Advances made.

Toronto Timber & Cordwood Co., Limited, 24-3 95 King St. E., Toronto, Ont.

Wanted

ROCK and GREY ELM 3¼" thick suitable for bending purposes.

Quote prices to

The St. Marys Wood Specialty Co., 1 St. Marys, Ont.

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request.

The Jost Company, Limited, 285 Beaver Hall Hill, 1-t.f. Montreal, P.Q.

Pulp Wood

We are prepared to buy unlimited quantities of peeled poplar and hemlock and peeled or unpeeled spruce and balsam pulpwood.

ADVANCES MADE

Thompson & Heyland Lumber Company, Limited, 12-t.f. 123 Bay St., Toronto.

Lumber For Sale

FOR SALE—3000 Cords of Mixed White Birch and Tamarac, ready for shipment 10th December, 1920, at Stone Siding, A.E.R., 28 miles west of Sudbury. For further particulars apply to C. G. Hyett, Worthington, Ont., Soo branch C. P. R. 24-5

Pulpwood For Sale

1920-1921 Delivery

3,000-4,000 cords Spruce and Balsam.
1,000-1,500 cords Poplar.

JAMES THOMAS CLAIR, 11-t.f. Clair, N.B.

For Sale—White Ash

1 car each 1", 1¼", 1½" and 2" No. 1 Com.
1 car each 1", 1¼", 1½" and 2" No. 2 Com.

Dry Northern stock of good texture. Can ship immediately at attractive prices. Also have good stock other grades and thicknesses one inch to four inch. Address Box 426, Canada Lumberman. Toronto. 23-2

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. 187 Square Miles in province of Saskatchewan, including Saw Mill, Planing Mill and general equipment such as Logging Engine, Tanks, Rutters, Snow Plows, 30 sets McLaren Logging Sleighs, etc., etc., For further information address the Saskatchewan Lumber Co., Limited, Crooked River, Sask. 22-25

Miscellaneous

Wanted

1 High Powered Gasoline Wench Boat. Must be in good shape.

Western Contracting Co., Ltd.,
1 Nipigon, Ont.

ONTARIO

Sale of Timber

Tenders will be received by the undersigned up to and including **Thursday, the 20th day of January next**, for the right to cut the timber on Berth G.49, lying southeast of the MacAulay Lake in the District of Rainy River.

For conditions of sale and further particulars apply to Mr. W. M. Jones, Crown Timber Agent, Fort Frances, Ontario.

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, December 14th, 1920. 1

Sealed Tenders addressed to the undersigned and marked on the face of the envelope "Tender for Metagami Timber" will be received up till noon of **Wednesday, January 19, 1921**, for the merchantable timber of the pine, spruce, tamarac and cedar species growing on the Metagami Indian Reserve in the district of Sudbury province of Ontario.

Tenders should state the amount of cash bonus they are prepared to pay for this timber over and above dues payable under sworn returns furnished by a licensed culler of the timber cut each season.

The tariff of dues is as follows:—

Pine, $2.50 per M. f.b.m. or $25 per M. cu. ft.

Spruce, $1.25 per M.f.b.m. or $12 per M. cu. ft.

Tamarac and Cedar, $1.50 per M. f.b.m. or $15 per M. cu. ft.

All logs over 18 feet in length to be scaled under the cubic-foot standard and if the timber is taken out in the form of ties, poles, posts, etc., the tariff covering these wood goods may be had on application.

An accepted cheque on any Canadian chartered bank for ten per cent. of the amount of bonus tendered and made payable to the order of the undersigned should accompany each tender, which in the event of failure to carry out the undertaking will be forfeited to the Department.

Forty per cent. of the amount of bonus tendered must be paid within thirty days from the date of notification of acceptance of tender, and the balance or fifty per cent. must be paid within one year from said date and will be subject to interest at the rate of six per cent.

An annual license will be granted to the successful tenderer and the timber must be cut and removed under the regulations of the Department. Ten years will be allowed in which the timber must be cut and removed.

Any further information that is desired, together with plan of the Reserve and copy of the regulations may be obtained from the undersigned or from Mr. T. J. Godfrey, Indian Agent, Chapleau, Ont

DUNCAN C. SCOTT,
Deputy Superintendent General of Indian Affairs
Ottawa, December 9, 1920. 1-2

Box Making in New England.

Not less than $50,000,000 worth of wooden boxes are manufactured in New England each year by the 210 establishments engaged in the business. The lumber used by the box factories amounts to 670,000,000 feet. About 6,000 men are employed in the factories.

At present paper manufacturers are offering prices for lumber that makes it difficult for box manufacturers to secure material. The saw mills of northern New England are closing because the paper manufacturers will pay more for the logs in the water than can be obtained for the sawed boards.

There is scarcely a commodity in connection with whose manufacture more labor is used in proportion to the cost of materials than the wooden box. The cost of cutting the logs has increased 150% over what it was a very few years ago; freight rates have increased 40% and since the war the cost of labor has increased two and a half times. Shorter hours have cut down production so that there is small prospect of a drop in the prices of wooden boxes. Experiments and studies by the Forest Products Laboratory at Madison, Wis., however, are resulting in greater efficiency in box manufacture. The thicknesses and the strength necessary to carry different weights are being worked out scientifically and this has resulted in some saving.

The box business is one which touches all other industries and upon which nearly all are more or less dependent. New England was first in the field and has always done a lion's share of box manufacturing, drawing upon the forests of Maine, New Hampshire and Massachusetts for the lumber and looking to the neighboring manufacturers for a market.

The manufacture of boxes is as old as civilization. The Egyptians made mummy cases of wood smeared with bitumen. Some of these gruesome cases, 6000 years old, are still in existence.

Dirigible Balloons for Forest Fire Fighting.

Millions of doliars' worth of valuable timber has been saved by the American Government during the season just passed, by the use of airplanes in forest fire fighting. Fires can be so accurately plotted by wireless from the planes that the fire fighters can be directed to within a quarter of a mile of the exact location.

Planes are now being made for the enlargement of the airplane patrol service for next season. It is also proposed to employ navy dirigible balloons for transporting fire fighters from the fire control stations to the fire. Men, with all equipment, will be loaded into the dirigible, taken directly to the scene and dropped by means of a long rope ladder.

Aside from the saving of millions of dollars to the nation, the service is training, for future emergency, scores of army flyers.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

Review of Current Trade Conditions

Ontario and the East

Business in the lumber line continues quiet, and although conditions are expected to improve steadily from this out, it is not likely that much will be done before February 1st or later. Building projects, however, are beginning to take shape. There have been many inquiries received for stock, although most of those asking prices are not in any hurry to close transactions. It is probable that some of these inquiries are from retail dealers who are seeking information which will help them in making their annual inventories. A number of wholesalers have reason to believe a few represent purchases. During the next few days the retail lumbermen will be busy in stock-taking. On the whole, the vast majority have had a good year during 1920 and little cause to complain.

Regarding 1921, there is no reason for pessimism. Stocks are low and now would seem to be a good time to purchase, so far as the "Canada Lumberman" is able to learn. It is doubtful if prices will drop any further, and this applies particularly to hemlock, which is being quoted away below the cost of production. When the call comes again for forest products, quotations are bound to rise. It is desirable that sane,, consistent buying should characterize the situation more than the hit and miss plan which has been prevailing for the last few weeks. While travellers have been chasing lumber buyers, the latter have been receding and the result is that there has been quite a difference between expectation and realization.

It is announced that wages in the northern woods have fallen considerably, due to the surplus of men. Sensational paragraphs have been appearing in the papers to the effect that in some respects the reduction has been 50 per cent. and that the workers have been ready to accept the same although putting up a rather vigorous "kick." It may be stated that any new men taken on are engaged at a lessened wage, but all the old hands are being retained at the same figure, viz., $70.00 to $80.00 a month. It is not probable that the lower cost will apply very generally to the majority of men in the camps. There is this to be said that the workers are more efficient than last year, being anxious to retain their places. One prominent lumberman stated this week that he only had four camps this season but that he was getting as much out of the men in these four as he was out of seven camps last winter when labor was extremely restless and men were utterly indifferent regarding what work they performed.

Freight rates decrease 5 per cent. from this out. Whether this will have any material effect in the revival of the lumber business, is not known just at present.

Nearly all the plants in B. C. have been closed down over the holidays and will not resume yet for a few days. There is nothing particularly active in any line of western stock and eastern salesmen do not look for a radical change until, at least, a month or six weeks have glided by.

In the meantime now that the quietest season known for a long period is over, confidence is being established. It is felt that the future will come around alright and that the present period of depression will be much shorter than at first expected. Confidence and co-operation are the desirable characteristics for the present. With bumper crops being harvested and the call for wood products and all other lines larger than ever, and with a decreased cut, and the slowly lessening cost of production, the future of the lumber business is predestined to be alright.

Stocks at most of the mill points in Ontario and Quebec are not heavy, and, while it is not advisable to make predictions, nevertheless there may be a shortage in certain lines of woods before six months elapse.

There is not a lumberman who wants to see a repetition of 1920 conditions, that is inflated prices during the first six months, then a sudden dropping off and only a fair amount of stock moving, and latterly little or nothing doing at all. The expressed desire of all is to have everything proceeding on a more even keel with quotations becoming more stabilized. What the lumber industry requires at this juncture is more equalization in production and demand.

There are bright prospects for construction, not only in the dwelling house line but in apartments, business blocks and extensions to warehouses and factories, and already builders in Toronto and other cities are making extensive preparations for the activity that is ahead. On the whole, 1921 is to be a good year in the lumber industry.

It is expected that the abolition of the luxury tax will at once create considerably more business for furniture factories, piano concerns, gramaphone plants and others, who have found trade rather dull of late owing to the people seriously objecting to the tax. Now that the levy has been raised, there is a disposition on the part of the public to buy more freely. This will mean added business for various enterprises and naturally an improvement in the hardwood market.

United States

Business in the lumber line continues quiet, and there is little doing during the Yuletide season. None of the firms expected to transact any volume of trade, and all joined heartily in the spirit of Christmas. Attention is directed principally to what 1921 will bring forth. It is generally believed that there will be an active building campaign this spring and that business will revive along many lines. Confidence is being restored and it is the expressed hope of all that there will not be a runaway market during the next twelve months. The wheels of production gradually have been slowing down for the last thirty days, and by the end of this week production of lumber probably will have reached the lowest point attained in many years. Compared with stocks on hand at the beginning of the year there has been an accumulation at producing points, but compared with stocks on hand at this season in pre-war years the amount of lumber at producing points is considerably below normal and in many cases mill stocks are badly broken. When production is resumed at something approaching normal some time will be required to build up broken assortments and restore stocks to their normal condition.

Speaking of the future, the "American Lumberman" says:—The question now is—Can anything be done to prevent a recurrence of this runaway market and stabilize prices at a point that will give to the producer a satisfactory margin of profit and at the same time make it possible for dealers to keep their stocks properly assorted and be in position to take care of building needs of the country? If a revision of the anti-trust law is necessary to bring about this very desirable end then everybody ought to get busy in an effort to have this law revised. It hardly seems possible that there could be any opposition to a revision of the law that would make it possible for prices of building materials to be stabilized at a point that would permit building to go forward and the housing needs of the country provided at a reasonable cost. Who will take the lead in bringing about this much to be desired situation?

As economic adjustment proceeds, the future is being faced with less apprehension and hopes are growing stronger than 1921 will see a revival in business earlier than was expected. The question is. "What effect will it have on prices? Will these ascend when retailers come into the market? The latter have allowed their stocks to get very low. Just at present there is practically no price list on any lines, and business is simply marking time.

In Southern pine things are still quiet and buyers are not yet placing any orders except for such material as they immediately require. In the meantime the number of inquiries are increasing and some orders for car materials have come through. It is said that there is also a little different attitude on the part of buyers and that, instead of their saying "We are not buying to-day," they stop long enough to enquire "What is the price?"

The amount of actual business in hardwood is not large but inquiries are coming in from many new sources, which may or may not mean that several transactions will be closed ere long. There is no doubt a considerable portion of these are simply "feelers," which will help retail dealers in making up their inventories, but, on the other hand, there are, no doubt, several which will lead to actual orders. Trade should show a good increase soon after the first of the year, as dealers have for some time moved stock constantly without buying for replenishment except where they had got down to absolute bedrock. and their supplies, as a general rule, are low. Although most of them undoubtedly feel that this is a good time to buy, they are postponing such activity until they have completed their inventories, when, however, they should come out with big wants. The railroads also show an increased disposition to buy and business in ties and timbers has increased materially of late. Reports from most sections indicate that hardwood prices are firming up distinctly — although as yet no actual advances have been recorded—and this seems only natural when it is kept in mind that a great many of the hardwood plants are closed down, that their stocks are not what can be considered abnormally heavy, and are being shipped from right

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

along. Firsts and seconds is the strongest grade in the market, and it would not be surprising if there would develop a shortage in this item very soon after buying begins.

Great Britain

Many in the trade are beginning to think that the turning point as regard prices has been reached and that the decline will not proceed much further, and that after the last Baltic cargoes have arrived the low prices of November will not be repeated. Were it not for the very weak spruce position, business would undoubtedly be more general; but unfortunately the quantities of spruce in the country are too large, and spot prices continue to fall. In London, for instance, St. John's spruce is offering at £31 and £32 for 7-in. landed, £32 to £33 for 8-in., and under £40 for 9-in., while for the smaller sizes £24 and £25 would be accepted. Quebec spruce is fetching proportionately better figures, but there is plenty of this also in the country, and stockholders know that the moment they press sales, prices drop. Values have now fallen considerably more than £10 per standard from the high-water mark of the year, and no one is bold enough to say that the lowest point has been reached for the present spruce stocks. It all depends on the consumption, however. A revival in the general export trade would soon put a different complexion on the market, but unless this improves it seems clear that the holders of stock may be forced to wait, or else be compelled to take even lower prices to clear.

During the past few days there appears to have been a general steadying up in prices. Merchants are becoming firmer in quoting prices for their stocks. It is easily proved during the last month or two, in many instances, that it has been cheaper to buy from stocks held here than could be obtained by making contracts with shippers for goods to arrive. It may be that some dealers having large stocks on hand, have been eager to accept lower quotations in order to realize part of their holdings, but the general tendency at the moment is to maintain limits. The future trend of the market will be governed by the actual needs of trade as soon as business commences to revive again, but the present opinion of many leading merchants is that values have about reached the bottom for the present, and that there is more likely to be a general rise in prices rather than any further decline.

Not only is the ordinary market for sawn goods for 1921 very late in opening, but for specialists which are usually sold much in advance there is little sign of business, says the "Timber Trades Journal." Staves, for example, constitute a special market, but we have not so far heard of any contracts being fixed up for next season. Prices for cement sizes from Finland are low; negotiations were commenced a short time ago for some large lines, but the general tendency of prices to fall evidently convinced the buyers that it was best to wait, and the negotiations were broken off. Finnish sellers then were offering at about £15 to £16 f.o.b. for 28 x ½-in. staves, but they would probably take less now if there were any buyers. Business in chemical and Cornwall dimensions are also very quiet, and there is very little competition to secure next year's productions. At the present moment several large parcels of Cornwall sizes are on offer, but no buyers can be found. The firewood market also is just as dull; there is scarcely any enquiry, and the larger importers are probably wise in waiting off. In plasterers' laths some big transactions were concluded early last year, but we have not heard of any sales for 1921. This last named, however, appears to be a fairly safe market. The prices of laths have fallen very little, and if all goes well with house building, enormous quantities of laths will be wanted next season. However, the general tendency to wait events is very strongly marked and shippers are beginning to realize that they must leave their customers alone, until a clearer view can be obtained of future developments.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Montreal Looks for Trade Revival in the Spring

It is impossible to write in a very optimistic view concerning the Montreal market. Dealers in every section report that business has almost completely disappeared. It is not a question of price, but of demand, of which there is little, either from the retail yards or from other quarters. This is not an encouraging picture, but it is the fact.

The retailers have little stock on hand, and are not disposed to buy except for immediate requirements.

Wholesalers, as a rule, are not inclined to take a despondent view of the situation. The general attitude is that this extreme dullness is temporary, and that there is almost certain to be a revival in the spring. Some wholesalers point out that the lower prices are in line with the general reductions in other commodities, and that the lumber trade must expect to share in this price re-adjustment.

The American department is exceptionally slow. A Montreal lumberman who has just visited New York, Boston, Philadelphia and other points, stated that there was practically nothing doing in the way of lumber requirements.

Any hope of a Montreal industrial housing scheme has been killed by the announcement of the Administrative Commissioners that they will not take up the loan of $1,000,000 allocated by the provincial government. The principal reason is that the conditions imposed by the federal government make a scheme unworkable. The conditions will not permit the construction of two-flat houses, and in the opinion of the commissioners it is useless to expect working men to erect detached or semi-detached residences at a cost ranging up to $6,000 and involving charges, including repayment, equal to $45 per month. The provincial government passed a law permitting the flat system, but as this runs counter to the federal conditions, the law cannot be carried out. The commissioners declare that they will not accept any scheme until the conditions are altered.

Ottawa Business Stagnant and Woodworkers Closing Down

That a drop in the price of practically all grades of lumber may come about around June 1st, and that the wages of newly employed men for the woods camp may fall from ten to twenty dollars per month after January 1st, is probable together with the prospect that the New Year will see some woodworking factories closed down.

Prices generally remain firm, and it is about the only hopeful sign of the market. The trade in general is even duller than it was in the early part of the month.

No sign of price slashing or panic appears on the market. Stocks as a whole are considered sufficient to meet any demand at present anticipated, and seem adequate to comfortably fill any late winter or early spring demand that might arise.

An analysis of the market at the close of 1920—to state the matter frankly—show that the manufacturers of lumber have for the last two or three years been carrying on very high cost operations. In the first place, lumber was one of the last of several commodities to advance in price after the commencement of the war; but long before the cost of lumber ascended, woods operations and supplies began to soar and the lumberman in some instances had to wait two or three years to get back the money they spent in taking out the logs. The experience of the last six years has taught the lumbermen of the Ottawa valley a whole lot about financing operations, the extension of credits, etc.

To be brief, they have in a broad way learned the value of money. In their operations they are called upon to get credit to finance their bush work many months or perhaps a year or so in advance. Now money they know is "tight," may get tighter, and they have to pay interest upon it. This interest with increased operating costs, has got to be taken care of in the retail price of lumber. Again, the cost of woods labor has during the last few years soared to unheard of figures, with the result that greater advances than usual had to be made from banks to finance woods and other operations.

In face of all this when the demand for lumber began to wane with the cessation of the war, the lumber manufacturers reduced their operations, with the result that the same quantity of stock has not been gotten out of the woods or sawn for the last two or three years. Had pre-war production been ordered on the market this year or last, in face of to-day's declining prices, some lumber operators would have been swamped.

As it is, according to information given to the "Canada Lumberman," someone has to take a "big loss" in the lumber game.

Whether it will be the manufacturer, wholesaler, or retailer, in view of the prospective decline in prices, remains an undecided question among Ottawa Valley lumbermen. The manufacturer has a lessened production—it will be lower this summer and spring than last—the wholesaler in a general way says he is not buying, and the retailer says he has enough on hand, but is selling little of it.

On top of all this comes the woodworking and factory man, who announces that the prospects are, he is going to close down his plant "indefinitely" or until such time as orders warrant his reopening. In other words, he is going to see business ahead, or "nothing doing." During the last two weeks of December, announcement was made that the plant of James Davidson's Sons, one of the largest woodworking factories in the Dominion, would close down indefinitely on December

Galbaduk
TRADE MARK

The Standard Water and Mildew Proof Fabric for Horse Covers, Tarpaulins, Etc.

Galbaduk is entirely manufactured in our own factories, both the cotton canvas and the waterproofing process, from the cotton fields through our plant to the consumer.
Absolutely water and mildew proof and cheaper than any other waterproofed duck or canvas on the market today.
Suitable for covering all kinds of building materials, cement, sand, lumber, motors, machinery, boat hatches, hay stacks, new sidewalks.

LIMITED
Wycliffe, B.C.

24th, and would remain closed until such time as further orders warranted its operation. The plant of the W. C. Edwards Company, while remaining in operation, it is understood, is only working on orders for the Riordon Company. This sash and door factory may close temporarily at any time.

It is reported that the descent in the price of lumber on the Ottawa market, within the next eight months, will amount to around thirty per cent. After the first of the year woods labor may drop from $65 and $70 to $45 and $50. Both factory and woods help remained plentiful on the Ottawa market during December, but in face of the curtailed woods activities of the manufacturers and the shortage of the orders to the woodworking plants, together with the usual cessation of building enterprises at this period, it is doubtful if the lumber trade can absorb it all this year.

One of the earliest drops is in the price of hardwood flooring, white oak, which comes mostly to the Ottawa market from the United States. The decline amounts to about twenty-five per cent.

The demand for lath and shingle remains slow. Rail transportation is good, and foreign cars are plentiful. The European situation showed no change.

St. John Says There is No Demand for Deals

It has been so long since there has been such a stagnation in the lumber trade at St. John that it seems impossible that there should not be really more trading than there is. With the winter liners running, it always for the last few years, has made a great difference, as considerable stock was delivered alongside ship from the different mills here. From time to time as the liners were in port, a certain amount of deals found their way on board. This season it is not so and the shipment of deals up to the present has been nil. The steamship people are still asking 200 shillings freight and shippers refuse to pay; in fact, it makes no difference what the rate may be for deals. None will be shipped until conditions right themselves in Great Britain where the stocks at present are extremely heavy and business in narrow stocks very poor; in fact, when any business is offered in the deal centres of England, the yards in many cases are making heavy reductions.

In the United States business is almost dead and it applies to many lines outside of lumber, and financial conditions are seemingly bad. Certainly until some money can be had for building, the lumber trade must suffer. At the moment it does not look as if the trade either in England or United States will improve for some months. This, of course, is purely guesswork and at any time certain lines, such as lumber, may stabilize and profitable prices in the lumber trade maintain again.

Very few sales of carload stocks have been made, and practically no inquiries are coming in. It is said that narrow random spruce from the provinces has been sold as low as $36.00 per M, delivered Boston.

Local retail trade during the last few days has fallen flat and reductions are being made in many lines. Of course it matters not how many reductions are offered, it has no influence on selling, as there is no work going on in the building trade, and as the winter has now come on, all repair work has stopped. Such material as hardwood flooring and low grade spruce has sagged considerably in price.

All the mills have finished their season's sawing and will not start until next spring. Not much repair work is being done upon the different plants and no extensions are planned for the coming year. What little cutting of logs that is being done in the St. John section, is about finished as far as yarding is concerned; in fact, there are very few operations in the woods either in the country below or above Grand Falls. The cut of logs to come through the booms at Fredericton next year will not exceed 25,000,000 feet. Wages are decreasing and many men are to be found for all trades.

Pulpwood has dropped to some extent but this drop applies largely to rough wood, but where the forests are green, the operators will not cut any pulpwood at any reduction.

General Jottings in Short Shape

A provincial charter has been granted to the United Growers' Packages, Limited, with head office at Niagara-on-the-Lake, and a capital stock of $75,000, to carry on the business of timber merchants, sawmill and shingle mill and pulp mill owners, loggers, lumbermen, etc., and to manufacture lumber, lath, boxes, baskets, containers, etc. The incorporators of the company are Thos. R. Revett and Wm. H. Hunter of Niagara Township, and A. T. Baker, Wm. A. Griffis and Chas. E. Secord, Gratham Township.

The Mead Company, with a capital stock of $100,000, and head office in Toronto, has been incorporated to sell pulp, paper and all other products connected with the pulp and paper business. Among the incorporators are Thos. Gibson, Joseph Gibson and others, of Toronto.

Pine Point Park, Limited, Oshawa, Ont., have been incorporated to carry on surveys and cut wood and timber. Capital, $33,500. J. McLaren of Scugog township and A. Elliott of Brooklin, Ont., are two of the incorporators.

The Manoun Pulp & Paper Co., Limited, Montreal, of which J. P. Anglin is president and T. G. McLaurin vice-president, are having plans prepared for a pulp plant and hydro power development at LaTuque, which will cost $1,000,000. The company has acquired the power rights known as "Allard Falls," on the St. Maurice River above LaTuque, and about 9,000 h.p. will be developed to operate the proposed groundwood pulp mill of 3,000 tons capacity a year.

Many Meetings This Month in Montreal

During January 19, 20 and 21, meetings of various forestry and pulp and paper associations will be held in Montreal. On the first named date the St. Maurice Forest Protective Association will hold their annual meetings, while the woodlands section and the technical section of the Canadian Pulp and Paper Association will meet on the same date. On January 20 the members of the Canadian Forestry Association will hold their annual meeting, and on the following day, January 21, the Canadian Pulp and Paper Association will also hold their annual meeting.

Mr. McBride Sent Yule-tide Greetings

Ex-Controller Sam. McBride, wholesale lumberman, who is a candidate for the mayoralty of Toronto, was unable to be present at the Christmas fete of the lumberman owing to a previous campaign engagement. Mr. McBride sent a substantial donation for the Infants' Home and Infirmary, to which the proceeds of the evening were donated, and also conveyed through one of the members of the Entertainment Committee his heartiest wishes for a prosperous new year for the Wholesale Lumber Dealers' Association.

Wayagamack Co. Doubles Its Earnings

The gross and net earnings of the Wayagamack Pulp & Paper Company of Three Rivers, Que., show a huge increase during the past year, while the profits have been more than doubled. The annual report for the year ending November 30th, has just been brought down and analysis would indicate taking advantage of a prosperous condition to place the company in a strong position, both from the standpoints of timber limits and financing as well as plant production.

An outstanding feature of the annual report is that the enlarged production and earning power was obtained from the existing equipment of the company as the proposed additional machines will not be installed and in operation until the spring or early summer of 1921. Market conditions have been exceptionally favorable for the company during the twelve months just closed.

The profit and loss account shows that the gross income for the year amounted to $2,152,707, as compared with $1,103,687 in the previous year. The net earnings were $1,108,807, equipment to 22.17 per cent. on the outstanding common stock, and compared with $551,587, equal to 11.03 per cent. last year.

The general statement of assets and liabilities also shows some interesting changes, representing the very much larger business which the company is now handling. Total current assets now stand at $4,445,627, and compare with $2,652,253. These compare with current liabilities of $2,337,173 against $585,095 a year ago. The current assets and current liabilities represent in particular the large addition of materials on hand, and the temporary financial arrangements which have been effected to provide for their purchase, in anticipation of additional financing, which will be carried out by the shareholders of the company.

In inventories, the pulpwood, logs and lumber holdings stand at $1,751,884, compared with $722,694; stores, chemicals and fuels, $1,071,950, up from $303,577; logging expenses, season 1920-21 $531,667, against $417,528. In current liabilities accounts payable stand at $937,836, up from $510,095. This year there also appears bills payable, including payments on account of limits, $240,500, and bank loans current for purchase of limits, $600,000, against the purchase made during the course of the year. Reserve for war taxes, 1919-20, amounted to $413,837.

In the statement of fixed assets, the company also makes provision for the expenditures made in the different departments during the course of the year, and buildings, plant machinery, etc., stand at $3,132,065, to which was added expenditure during the year of $530,995, making a total of $3,663,061. Property limits, real estate, etc., total $5,890,925, and expenditure during the year $726,126, making a total of $6,617,051, from which was deducted for stumpage $297,900, leaving a total of $6,319,151, against $5,890,925 a year ago.

The total assets complete at the end of the year amounted to $14,725,259, compared with $11,989,382 a year ago.

Keeping Tab on Cost of Job in the Mill

Simple and Complete System by Which Live Planing Mill Man in Cayuga Knows Where He is At

(See page 74 for the forms used)

It is important to know costs. Many a man in business, who is conducting affairs on the hit and miss plan, is not exactly sure of anything but estimates that it is "around" or "about so and so." There are operators taking in jobs in the woodworking line to-day and sending them out again without any definite knowledge of the amount of time consumed in their execution, the cost of the material, the overhead charges, etc. They have heard that the average is so and so and they figure that by adding this on, they will come out right.

Much more might be stated along this line and emphasis laid on knowing where one is at. He, who does not properly understand costs and know definitely overhead expenditure, will never get very far on the road to making money.

Among those, who have given the subject close consideration, is Fred Barraclough, of the Cayuga Planing Mill Co., Cayuga, Ont. Mr. Barraclough leaves nothing to chance. He knows exactly what all his overhead charges are and what the average production of each man is for a definite number of days in the year, and against this has to be levied a certain figure per hour for bench work and machine work.

Ability to figure costs, keep a correct tab on jobs and eliminate guesswork are highly important matters in the success of a business enterprise in these days of keen competition when close supervision, economy of operation and securing an adequate profit, play so vital a part in the expansion and prosperity of any undertaking.

The Cayuga Planing Mill Co. does a general milling business both in the sawing line and in the turning out of interior and exterior woodwork requirements for builders, contractors, etc., as well as producing hardwood floors, etc. Most of the material is supplied by the farmers themselves. When a customer comes in, Mr. Barraclough first makes use of Form A, which gives the date when the job is wanted, the name and address of the customer, his phone number, the order number and a description of the work. This form is filled out in duplicate and signed, if possible, by the customer.

In explanation of the other forms used, Mr. Barraclough says:—Form B. is only the workman's time sheet. He does not put down material, but only whose job he was working on. In the one I have made out he only worked 3½ hours' bench work on June 8th; one hour was for shop fixing belting, etc., and 3 hours' machine work is not on the Form C I am sending you, as that is another job, but, of course, I would have the same for that job. I am just showing how I take care of a job, if a man is working on something also, which I might break him off.

I enter Form B in my cost book (Form D) every morning, which is just twice the size of the sheet I send you, besides entering in my time book the hours the workman worked.

Continuing, Mr. Barraclough says: Form C is the stock sheet for the material used on a job which the workman puts down as he gets it. He states whether it is from finished stock or in the rough, clear or mill run; if in pine, which we mostly use, where he gets it, etc. (I might say here that our storing sheds are all partitioned off and I figure on numbering each rack and when a workman takes it out he will state what rack and I can take it off the stock book, so that at all times I just know how my stock stands.) "Mill" is where we keep all the finished material; it also answers as a check of the workman's time as he enters the time each day on that job.

Form D. which I term my cost book, has a key and is just like the ledger. I think it explains itself, only I left out two headings—Finished, Rough—which you can add if you like.

The job shown on Form D was one that we took to make. We agreed to do it for whatever it cost on a basis of material and 85 cents per hour for bench work and $1.30 per hour for machine work. I showed the customer how I would keep track of same, to which he replied he did not think it could be fairer and that I would be getting a reasonable profit and him a fair price. We get a lot of these kind of jobs. About the only fair way and sure way of doing them is by the hour and, by this system, it has been no trouble to me to keep track of everything. While help has been scarce and I have been at the bench myself, I have let things go for a few days without entering up, but my day cards were there, and I could carry out the task in a short time.

International Paper Co.'s Canadian Operations

Letters patent have just been issued by the Quebec Government to the "Canadian International Paper Company" of Three Rivers, P.Q., with a capital of $20,000,000. The new company possesses huge buildings in Three Rivers, where it began lately to manufacture sulphite. The production of news print paper will begin next summer.

The company has timber limits in the St. Maurice district, sufficient for all needs during the next hundred years. The temporary directors are: Philip T. Dodge, President of the International Paper Company, of New York; Robert F. Grant, Manager of the St. Maurice Lumber Company, Three Rivers; Hon. Jacques Bureau, K.C., M.P.; Philippe Bigue, K.C.; Hon. Wilfrid Gariepy, K.C., of Three Rivers.

The company has the right to manufacture and deal in all kinds of wood, pulp and paper.

Mr. Backus Secures English River Limits

The Ontario Government has awarded the English River pulp limits in the Kenora district to E. W. Backus of the Fort Frances Pulp & Paper Company, Fort Frances. It is announced that the bid of Mr. Backus for the holdings, which are 3,000 square miles in extent, was the highest. The bids were for the bonus in a lump sum, which the tenderers would offer. The dues are regulated by the agreement and are the same in all new contracts. It appears that the bonus offered by the Backus interests is $50,100, which is twice as high as the next tender. Four tenders were received in all, two companies from the U.S. at $25,000 and $5,000 each, and a British Columbia firm at $25,000. In the agreement the dues are fixed at 80c per cord on spruce, 40c on other pulpwoods and 15c on railway ties. The Ontario Government holds the right to increase the dues at any time.

There is very little hardwood on the limits except some undersized birch. There are great water stretches within the limits and it is contended that if they are to be operated successfully, large capital will be required and that it will be necessary to construct a railway in order to get the pulpwood to the mills. The logs cannot be floated to Kenora, where Mr. Backus will erect a large pulp and paper mill, as the streams run the other way. There are said to be numerous waterfalls and rapids which would make the floating of logs in any direction a very expensive proceeding.

In the agreement made between Mr. Backus and the Ontario Government some time ago, it was set forth that Mr. Backus would be compelled to build mills at Kenora and there were certain stipulations regarding power rates. The provincial authorities also reserved the right to enforce the regulation that all output of the new Kenora paper mill must go to Canadian consumers if it is required in an emergency.

The new pulpwood concessions, which have just been awarded, are the largest yet handled by the present Ontario Government. Mr. Backus has to establish a sawmill at Kenora and have it in operation during 1921. A 50-ton pulp will will also be erected in that town, to be increased eventually to a 200-ton mill.

Will Tap Rich Pulpwood Country

Construction will start at once on the extension of the Temiskaming & Northern Ontario Railway from the present terminus at Cochrane to a point twenty-five miles north. The new line will cost about a million dollars. It is proposed to build the road to Kettle Falls at the junction of Abitibi and Frederickhouse Rivers. At this point there is one of the finest pulpwood forests in the northern country, which cannot be developed now because of lack of transportation.

In the Abitibi and Frederickhouse section there are tremendous waterpowers to be harnessed, and Premier Drury stated recently that it was estimated that up to 100,000 h.p. would be sufficient to supply all the power needed for the pulp mills, which would be established there after the road enters, and also to electrify the Temiskaming & Northern Ontario Railway.

Proposed Shingle Tariff Was Rejected

A resolution favoring a shingle tariff on products of British Columbia mills crossing the line was defeated by an overwhelming majority at the congress of Pacific Coast lumbermen held recently in Seattle.

American manufacturers expressed anxiety to co-operate as closely as possible with the British Columbia manufacturers and thus stabilize the industry.

Low Water Does Not Stop Production

Newsprint production of the Spanish River Pulp & Paper Mills, Limited, continues at a very high level. The total combined production at the Espanola, Sturgeon Falls and Sault Ste. Marie mills is now running over 530 tons a day. The company's production of groundwood pulp has been affected by the low water conditions in the rivers which serve the Espanola and Sturgeon Falls plants, but for over a year past the company has been adding steadily to its supply of groundwork and at the end of its last fiscal year had over 18,000 tons of groundwork on hand. In addition to this supply, large amounts have also been contracted for in the open market. As a result, the production of the newsprint plants has not been affected by the lower water conditions. In addition, the Sault Ste. Marie plant, which is served from Lake Superior, is in no way affected by the conditions on the rivers due to the protracted dry period. The Sault Ste. Marie plant has been establishing new records in production throughout the month of November.

EDGINGS

Sixty-one houses have been built by the Sudbury Housing Commission in two years.

The Pigeon River Lumber Company, Port Arthur, will rebuild at once the mill destroyed by fire.

The sawmill of Louis Michaud at St. Alexandre, Que., was recently wiped out by fire. The loss is $25,000.

The capital stock of the Northern Lumber Company, Winnipeg, has been increased from $200,000 to $750,000.

The Georgian Bay Lumber Company, Limited, Waubaushene, Ont., have been authorized by supplementary letters patent to increase their capital from $200,000 to the sum of $1,500,000.

Keystone Transport, Limited, Montreal, P.Q., have been granted a federal charter of incorporation to manufacture and deal in ships, barges and other wooden shipping products; capital $5,000.

Four million feet of creosoted railway ties are to be sent to India by the H. R. MacMillan Export Company, Vancouver, and are now being treated at the plant of the Vancouver Creosoting Co.. north shore Burrard Inlet.

The Parks Commissioner of Kitchener, Ont., is taking steps to prosecute the parties guilty of chopping down young cedar trees to be used as Christmas trees. One of the woods, owned by the commission, has been literally stripped of young trees.

T. B. Little Company, Limited, Montreal, Que., were recently granted a federal charter of incorporation to manufacture and deal in pulp and paper products. Capital $200,000. Two of the incorporators are F. B. Common and F. G. Bush, both of Montreal.

Buildings to the value of $12,000,000 are now in course of erection in Toronto, according to the City Architect, who says that construction of several large structures is being held up in hope of prices dropping. He does not think there will be any great decrease.

The Montreal Paper, Limited, Portneuf, P.Q., have been granted a provincial charter of incorporation to manufacture and deal in all kinds of paper products. Capital $500,000. T. P. Bishop and A. Bishop, manufacturers, both of Portneuf. are two of the incorporators.

Mcnjobagues Lumber Company, Limited, Three Rivers, P.Q., was recently incorporated by provincial charter to deal and export lumber and other forest products. Capital $500,000. J. H. Desroches and L. J. Dostaler, both of Grand Mere, P.Q., are two of the incorporators.

Hazen Flemming Company, Limited, Woodstock, N.B., were recently granted a provincial charter of incorporation to conduct a general lumber business in all its branches. Capital $24,000. J. H. Flemming and J. K. Flamming, both of Woodstock, N.B., are two of the incorporators.

Maguire, Patterson & Palmer (Canada), Limited, Pembroke, Ont., who are incorporated under federal charter have been incorporated under provincial charter providing they do not use a larger amount of capital than $1,000,000 in Ontario. E. A. Dunlop of Pembroke, is the company's attorney.

The Story Lumber Company. Limited, Ottawa, Ont., was recently granted a federal charter of incorporation to manufacture and deal in lumber, pulpwood and other forest products. Capital $50,000. J. R. Story and W. C. May. merchants, both of Ottawa, are two of the incorporators.

St. Maurice Valley Pulpwood Company, Limited, Three Rivers, P.Q., were recently granted incorporation under provincial charter to buy, sell and deal in logs, lumber, pulpwood and other forest products. Capital $100,000. J. H. Desroches and L. J. Dostaler, both of Grand Mere, P.Q., are among the incorporators.

To relieve those who are out of work temporarily there is a move on foot to get the Town Council of Milton, Ont., to purchase a bush near that town and have the men cut wood, the Council to supply the citizens with fuel at a fair price. This plan was worked at Wiarton in 1914 and the citizens received hardwood at $3.50 per cord.

Ed. Lacroix, Ltee., St. Georges East, P.Q., have been granted a provincial charter of incorporation to acquire the business of Ed. Lacroix and to manufacture and deal in lumber pulpwood and other forest products. Capital $1,000,000. C. Lacroix lumberman, Daaquam, P.Q., and A. Moran, St. Marie, P.Q., are two of the incorporators.

The planting of 5,000,000 trees a year is the plan of the Laurentide Co. Grandmere, Que. The Canadians are facing a replanting problem on the lands of the company in Quebec, where pulp wood is being cut. Similar plans of reforestation by other paper manufacturers would do much to relieve the probable paper shortage of the future.

Many counties in Ontario are carrying on extensive work in reforestation and good progress in being made in that direction. York, Simcoe and Norfolk Counties are right to the front in this line. The latter has appointed a committee to look up land unfit for cultivation and suitable for reforestation with power to obtain options on 500 acres.

An order made by Master in Chambers Cameron at Osgoode Hall, Toronto, has added the Rainy River Lumber Company, Limited, to the defendants in the action brought by the Attorney-General against Shevlin-Clarke Company. This action is for the cancellation of timber limits, for the return of certain moneys, and for damages for trespass.

Announcement has been made that the Northumberland Paper & Electric Company, Limited. Campbellford, Ont., and the Canada BoxBoard Company have amalgamated under the name of the Canadian Paperboard Company, Limited. The new company operates at Montreal, Frankford and Campbellford. D. F. Robertson is the General Manager of the new company.

It is announced that Price Brothers & Co., of Quebec, will next year proceed with the establishment of a new pulp and paper center to be known as Saguenay City, three or four miles east of Chicoutimi on the Saugenay River. According to contractors, the building of the mills and houses will be started next Spring, and 4,000 men will be needed. It is expected that this

town will have a population of around 7,000 inhabitants. It will be an absolutely new community, as at the present time the site is occupied only by forests. The news print mill to be erected will have a capacity of between 400 and 500 tons per day, and when it is in operation the total news print output of Price Bros. & Co. will be around 500 tons per day.

The Fassett Lumber Company, Fassett, Que., have sent out to their friends a beautiful and artistically-colored calender for the coming year, entitled Shasta of the Eternal Snows," which is a revelation in forest giants, rushing stream, rocky gorge, mountain peak and wild rugged views from nature. The scenic setting is one that is admirable in every respect.

In regard to spruce and pine trees for Christmas, large quantities were offered in Montreal. A local dealer said there was no sign of a drop in prices and that he had to pay more than ever for his supply, some of the larger trees costing one dollar wholesale. Some firms sold trees seven feet high for two dollars, dropping the figure fifty cents a foot as the spruce decreased in stature.

The death occurred recently in Quebec of Edward Kelly, culler at the venerable age of 84 years and seven months. Mr. Kelly was born and educated in Quebec and previous to entering the Culler's Office fifty years ago, he was in the lumber business in Ontario and Quebec. A gentleman oi the old school. Mr. Kelly enjoyed the admiration and respect of all who had the honor of his acquaintance.

W. D. Connor, Wisconsin lumber operator and president of the Canadian Timber Co., of Victoria, who was to the coast on his annual visit of inspection, takes a serious view of the effect of the increased railway tariff on eastbound lumber shipments. He says the effect has been to drive British Columbia practically off the market in the eastern and central States, in these cities where there has arisen a demand for cheaper grades for building operations.

John Stanley Bancroft, formerly assistant manager of Granville Street Branch of the Merchants' Bank of Canada, Vancouver, has been committed for trial by Magistrate Shaw in Police Court on charges of theft of $45,000 in Victory bonds from the bank, making false entries, and conspiracy. At the same time Phil Gerwurtz, President of the Gerwurtz Lumber Company, was also committed for trial on charges of conspiracy and making a false statement with the purpose of securing credit from the bank.

The Kaministiquia Pulp & Paper Co. is rapidly proceeding with construction work on its mill at the head of Lake Superior and expects to be ready this month, to produce 25 to 30 tons of ground wood per day. It is the present intention of the company to ship all its products to the United States. where there appears to be a ready market for it. Under the present plans, a news print mill will be added to this plant ultimately, but when this step will be taken depends upon financial conditions and on the state of the market.

The annual general meeting of shareholders of William Hamilton Co. was held at the Peterboro' office of the company. The report of the directors for the financial year ending September 30th showed the affairs of the company to be in a satisfactory condition, and the prospects bright for the coming year. The company has a large number of contracts and orders on hand sufficient to keep the plant running at capacity. The company's business comprises the manufacture of hydraulic euipment, pump and sawmill machinery and general plate and steel construction work.

The mill of the Canada Box & Lumber Company, Bergemont Ave., Limoilou, Quebec, was almost entirely consumed by fire recently. L. J. Conway is the manager of the company and Gerard Garneau, secretary-treasurer. The mill was a one-storey wooden building, covered with asbestos shingles. In dimensions it was 275' x 50'. From the main plant the fire spread to the lumber room and later to the lumber in the yard, all of which was consumed. The office was also destroyed. Part of the assembly room was saved. The loss is roughly estimated at $70,000 and partly covered by insurance.

At the close of the Christmas examinations of the University of New Brunswick forestry class it was suggested that the class undertake to aid a proposed memorial building by cutting a million feet of lumber in college lands in Fredericton. The students enthusiastically endorsed the idea, and this week, in spite of weather conditions, several of them with Professor Pulling, are conducting a lumbering camp back of New Maryland hill along the Baker Brook, highly enjoying the outlying and gaining forestry experience as well.

A despatch from Sidney, N.S., says: "American interests, represented here by A. W. Jones of Boston, are about to operate in an extensive scale a large wood-working factory. The company. which is to be known as the Dominion Lumber Company, has a capitalization of $150,000, and its Nova Scotia office will be located at Sydney. Mr. Jones stated that already the company has secured 4,600 acres of valuable timber limits in Capt Breton and is endeavoring to purchase more. This lumber is to be used for manufacturing purposes, while a small portion of the tracts now under the company's control will be available for pulp.

The party of Eastern financial men, including F. P. Jones, Montreal, head of the Canadian Cement Company; Angus McLean, president of the Bathurst Lumber Company, and M. E. Priesch, who have been looking into the big pulp and paper plant which they propose to build at Prince George, B.C., have returned east. It has been announced that the plan of the company contemplates extensive developments in the Prince George area in the immediate future. The plant is expected to cover 200 acres, while a hydraulic power plant, capable of developing 50,000 horsepower, is to be erected. Mr. Jones stated that in two years it was expected that the plant would be ready to ship their products and would be able to meet all competition.

Some of the latest logging camps to close are those of the Canadian Robert Dollar Co., at Union Bay, the Hastings Mill at Rock Bay, the Desert Bay Logging Co. and the Nimpkish Logging Co. The weather has been unfavorable for logging operations of late and that, combined with general conditions, may put logs at a premium in a short time. Although mills are generally inoperative, there is some demand for timber, but logs will be very scarce in a month or so. Stormy weather of the last few weeks has resulted in losses for logging operators. The biggest was that of Bloedel, Stewart & Welsh, who lost forty sections off Bellingham, the value being close to $50,000. These logs were obtained from Crown granted limits, secured because they could be exported and were on their way to the company's mill at Bellingham. The Peck Logging Company has a standing boom of sixteen sections which got adrift. The forest branch at Victoria got a message that twenty or twenty-five sections of logs were scattered on the beach at Whaletown, some distance up the coast.

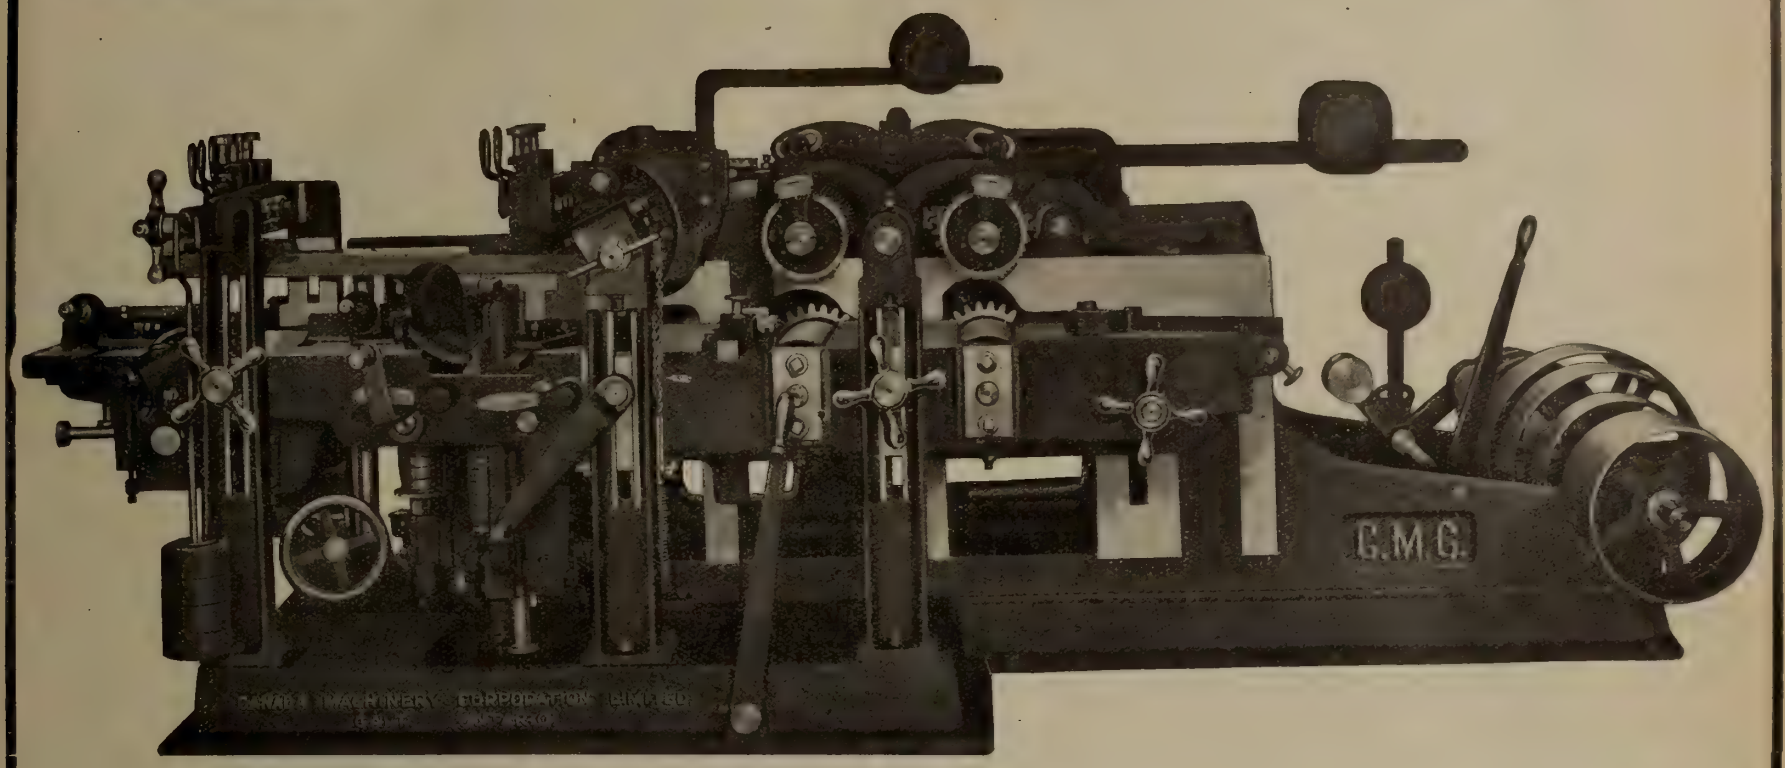
C.M.C.

No. 303 Heavy Moulder



Two Sizes 10″ and 12″

We firmly believe our No. 303 Moulder to be one of the best designed Moulders on the market to-day. It is adaptable to all classes of work, is capable of doing the finest work, and through the convenience of its adjustments, it can be set up in the minimum time. The operator's safety is provided for by guards wherever possible.

The table, consisting of a one-piece casting of ample weight and length, is supported on the operating side by three columns and is raised and lowered on two screws with a ball thrust bearing located centrally beneath it, insuring perfect balance and a table that moves up and down with the greatest ease. The table when set is locked in four places.

A powerful feed, consisting of two upper corrugated sectional rolls and two lower smooth rolls, all driven by gears, is supplied. Eight changes of feed from 11 ft. to 49 ft. per minute are provided, but any rate up to 100 ft. per minute can be given.

Rigidity and weight are two strong points with this machine. The long, heavy frames giving ample belt length and sufficient stiffness to support table and upper works, are mounted on a base which is a one piece casting, insuring freedom from vibration and perfect operation whether set on a special foundation or not.

Immediate delivery from stock.

Prices and full particulars on request.

FIRE BRICK AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

One Way to Lose Your Season's Cut

You can lose your entire season's cutting through a fire in your lumber camps. Once fire gets under way, bunk house, cook house, provisions—everything will go. Then in the middle of winter you can't start over again. Your winter's timber is lost and your competitor gets your orders.

The fire danger in every lantern or oil lamp is eliminated by Dominion Light. Add to this the convenience of having all the light you want where you want it and you have a sound business reason for installing Dominion Light.

Dominion Light Plants are a quality product built to a high manufacturing standard and not to a competitive price. This high standard means ability to deliver continuous power at a low upkeep.

Write us for full description and name of nearest dealer.

SPECIFICATIONS

Rating one K.W. (1000 watts) with a continuous overload capacity of 20% or more. Battery of 160 Ampere hours. Air-cooled engine with 3 S.K.F. ball bearings operates on Kerosene. Loads sixty 20-watt lights with engine running or thirty 20-watt lights from battery alone for eight hours.

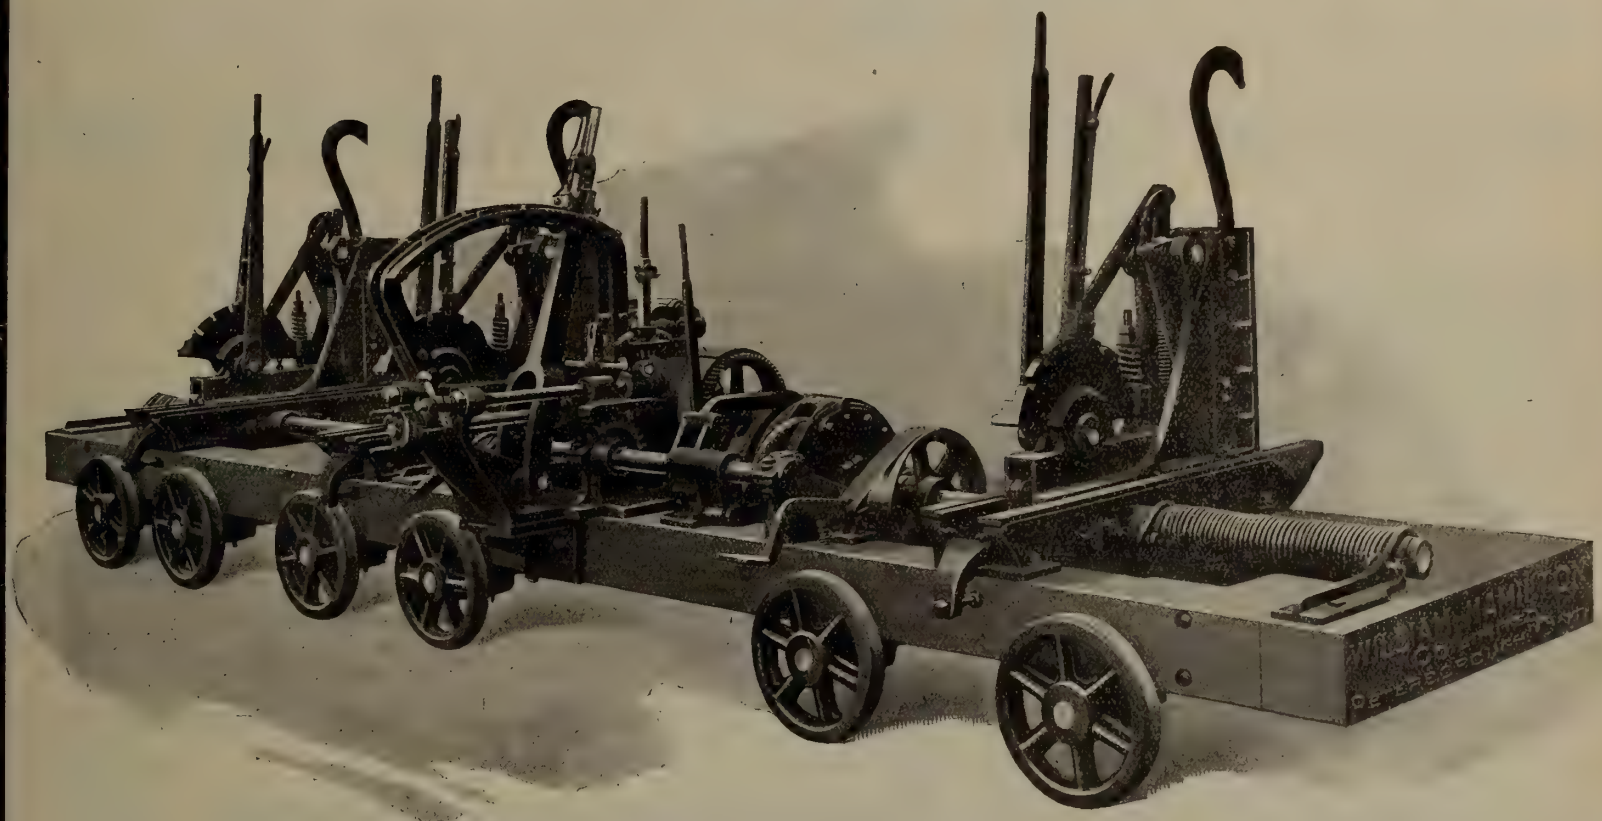
"HAMILTON" LOG CARRIAGES



Above cut shows one of our **No. 2 HEAD BLOCK CARRIAGES** with knee opening 40″ from saw line. Note the sturdy compact lines of this carriage, built for heavy but accurate service with weight properly distributed, and the dogs set low on the knees to insure gripping of the smallest logs.

We make these Carriages with pine or oak frames any length—having cast iron, or steel cast head blocks—with knee opening of 33″, 40″, and 54″, and equipped with any number of head blocks of any spacing required. Hand or Steam Set may be used, and carriages are designed for either steam or rope feed. They are built of the best materials obtainable for fast and accurate cutting, are equipped with **NEW DESIGN AXLE RECEDING WORKS** and have carriage wheels 14″, 16″ or 18″ diameter. We have installed hundreds of these carriages in Mills from Coast to Coast, and we guarantee them in material, workmanship, and design to equal any on the market to-day, and to give thorough satisfaction wherever used.

OUR CARRIAGE CATALOGUE IS YOURS UPON REQUEST

Consult us for any of your saw mill needs, and you will have a Plant looking after your interests **that has been in the Sawmill Machinery game for over sixty-five years.**

William Hamilton Co., Limited

Agents: J. L. Neilson & Co., Winnipeg, Man. **Peterborough, Ont.**

More strokes per minute.
More logs per day.
Less strain on the back and arm muscles.
Fewer trips to the filer.

This is a simple explanation of the enormous demand for Disston Cross Cut Saws.

An all the year round machine

The hard frozen logs of winter and the wet wood of summer is handled easily and swiftly by the Moreau Barker. This is made possible by reason of the simplicity of design and the extraordinary strength that characterizes the machine. All the materials used in its construction are carefully selected by us and the workmanship employed is of the highest grade.

We have no hesitancy in saying that where the simple instructions are followed, a saving in time, labor, money will result.

BEARINGS

The bearing is one of the most important parts of machinery—this is true in any industry—and the Lumber Trade is no exception.

Line your bearings with scientifically made Babbitts alloyed under the "Stanley Process." It is an elemental fact that there is less friction generated by high grade babbitts;—when friction is lessened, the wear and tear on your machinery is diminished.

Babbitt is designed to avoid friction. A scientific alloy accomplishes this best by its smooth homogeneity.

Specify "Stanley Process" Babbitts

York Belting 12

Gasoline Loaders and Skidders

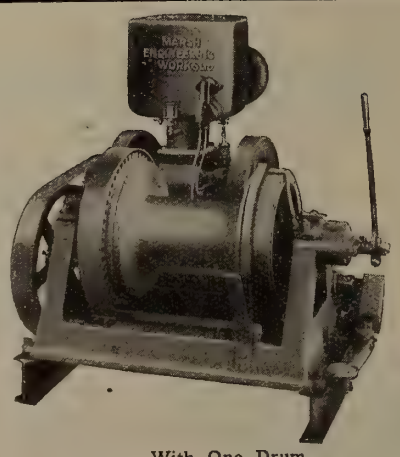
Will move your logs much more quickly and at a lower cost than man power. They have been thoroughly tested in Ontario lumber camps, and have won the enthusiastic endorsement of their users.

They are light enough to be moved easily about on the job, yet are built strong enough to be safely used for a considerable overload if necessary.

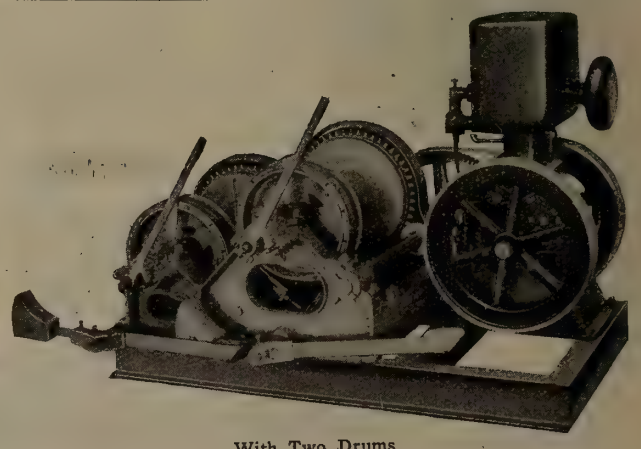
They are simple in construction, and can be operated by any fairly intelligent workman

They have been tested in the coldest weather, and run all winter every day in Ontario logging camps, even at 20° below zero.

We are now making these machines in two sizes—Six Horse Power, and Ten Horse Power The Six Horse Power size will move readily any log commonly found in Ontario and East. The Ten Horse Power size will handle two or three logs bunched together, involving a considerable saving of time at a small extra outlay for machinery.



With One Drum



With Two Drums

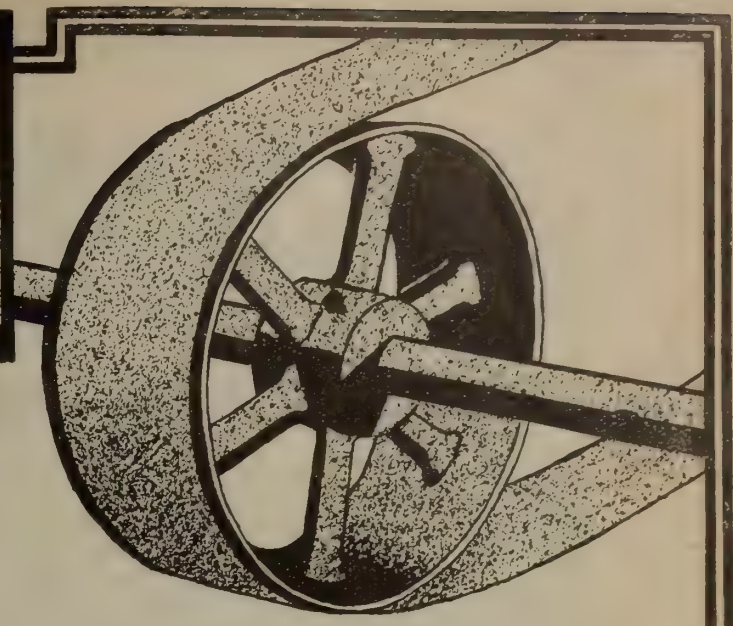
Gear Driven direct from the Gasoline Engine, and with Motor rigidly mounted on same bed as Hoist.

Marsh Engineering Works, Limited *Established 1846* **Belleville, Ontario**

Sales Agents: MUSSENS LIMITED, Montreal, Toronto, Winnipeg, Vancouver.

When You Overhaul Install

GOODHUE BELTS



"Acme Waterproof" Leather Belting

This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with "Goodhue Belts" and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won't stretch.

Good Will

—a mighty valuable asset to your business and something that cannot be built up in a few days. It is the result of painstaking efforts to give the customer just a little more than he expects—keeping the quality of your products standard—and backing up every word of your advertisements. In short, it's Service—Real Service—that builds Good Will.

Sturtevant
PUTS AIR TO WORK

Come Out of the Dust

Bring your men—plant—machinery—everything, out into the pure, clear, fresh air.

You can establish a wonderful change in your planing mill.

The dust—shavings—dirt—and coughing, choking workers—these conditions need prevail no longer.

Install the

Sturtevant (TRADE MARK)

Planing-Mill Exhausters

All shavings, sawdust and dirt, is drawn away from the edge of the cutting tool, as smoothly, as if some giant vacuum cleaner had been used.

Illustration shows an installation of the Sturtevant System in the C. P. R. Angus Shops at Montreal, where it has proved efficient and satisfactory.

There is no accumulation of litter—no chance of a dust explosion to wreck the plant sending thousands of dollars up in flames.

All this refuse is removed to some disposal centre by means of powerful fans, that draw it rapidly through pipes, up and away from both men and machines.

Dust Collectors and Furnace Feeders at Angus Shops of C. P. R., Montreal. Collectors in the center deliver shavings either to furnaces, box cars, or storage vaults

A clean mill constitutes an important factor in production. Machines littered with chips and shavings, and floors covered with refuse, delay operations, and militate against an efficient day's work.

A large number of planing mills in Canada are now using the Sturtevant System—and the owners would not be without it. Let us get you interested.

Our bulletin No. 261 C. containing complete information will be sent on request.

STUDY AT HOME
and Make More Money

What Is Your Job?

Are you the man who is bossed—are you doing the hard work while some other man gets the high pay for telling you what to do? Why not be the boss yourself? The only difference between you and the men higher up is in what they know what you don't know. They get their big pay and have the easy work because they know how to direct you and other workmen. If you could read blue prints, estimate on work, know how to direct construction, you too would be in the big pay class. Read below how you can get this knowledge and be a bigger man in your line.

Learn in Your Spare Time

At home—in your spare time—you can get instruction by mail from the experts of Chicago Technical College. You can learn all the higher branches of your trade and soon know as much or even a good deal more than the man who is bossing you now. If you are a workman, you can train for a foreman's or superintendent's job or you can look ahead to being a contractor in business for yourself. This training doesn't cost much and you can pay on easy terms. Look into this now. Just send the coupon below and get catalogs and full information.

FREE

Send the Coupon.

Lesson in Plan Reading

Get this free lesson. See from it how plain every point is made and how easily you can grasp it. Not a cent to pay. This lesson is free—sent to show you how quickly you can advance by taking a Chicago "Tech" home study course in Building. All you need do to get it is to send the coupon.

Complete Builders' COURSE

Prepared and taught by experts. No useless theories. Just the practical things you want to know—told in simple, practical language Easy to understand—and you have the personal direction of the Chicago "Tech" experts who explain everything—make every lesson clear to you.

What We Teach

Plan Reading. How to read a building plan. How to read dimensions. Detail drawing. How to lay out work from plans. Tracings and blue prints—how they are made. Practice in reading complete plans from basement to roof, etc., etc.

Construction Brick Work. Footings and foundation walls of brick, concrete and stone. Brick laying complete. Brick and stone arches. Use of different kinds of stone. **Carpentry.** Kinds and uses of wood, cornices, interior details, etc., etc. Plans and specifications for all kinds of buildings.

Estimating. Practical rules. Problems worked out from the plans. Brickwork and carpentry. Re-inforced concrete. Estimates of labor and material for all classes of construction. Fire proofing, tile flooring, arches, partitions, furring, terra cotta, etc. Lumber and timber; figuring board feet. Estimating mill work. Lathing and plastering, sheet metal work, marble jointing and decorating, glazing, plumbing, heating, wiring, etc.

Arithmetic, Architectural Drafting, Plumbing, Heating and Ventilating all taught by practical men.

Get This Training By Mail

You get all this training by mail and you study in spare time. Not an hour taken from your work. Keep on earning while you are learning—then step into bigger pay as a building expert—get paid for what you know—not for what you do. You be the one to know the "hows" and "whys"—to tell others just what to do.

Send Coupon Now

This brings catalogs and complete information about the course which interests you. See how others have profited merely by study in their spare time—by preparing for the big jobs above them.

Mark X in coupon to show which course interests you.

DOMINION RUBBER SYSTEM
AND ASSOCIATED COMPANIES

If It's Rubber—We Make It

In every factory, office, store and household some article of rubber is used daily as an important part of the equipment. Few users recognize its utility or its quality—to them the important item is price.

When you buy rubber goods be certain that you get a Dominion Rubber System product. It is your assurance of superior quality and satisfactory service. These products include rubber goods for every conceivable purpose, in standard stock sizes, or specially made to meet your needs in factory, mill, mine, lumber-camp, shipbuilding, marine and other industry.

Dominion Rubber System Products

Belting. For power transmission, prevents practically all power waste.

Hose. For steam, air, water, oil, acids, fire and every other regular and special purpose.

Packings. Our special packings for high and low compression service meet every requirement of modern engineering conditions.

Fire Equipment. Hose, coats, salvage covers, reels, brass fittings, helmets and every fire fighting requirement.

Moulded Rubber Goods. Our lines are particularly complete and include matting, sheeting, floor treads, tiling, gaskets, plumbers' supplies, and moulded and cut goods for every purpose.

No matter what rubber goods you may need, or what your problem may be, our technical experts can remove all element of doubt and save you many dollars in time and costly experiments.

'Phone or wire our nearest service branch for information or catalogue.

D. K. McLaren's
Genuine British-Oak-Tanned
Leather Belting

Minimum Cost

Maximum Power

The plant that is equipped with D. K. McLaren's Genuine British Oak-Tanned Leather Belting, never suffers from sudden stoppages caused by a broken belt. It is the carefully selected hides, and our oak-tanning process, that puts a quality into D. K. McLaren belting, not found in any other.

For years D. K. McLaren's Genuine Oak-tanned Leather Belting has been building a reputation which indicates its practical value to the men who use it. D. K. McLaren's may be found on the heaviest drives, and serving under the most exacting conditions where a belt of unvarying service, strength and dependability is essential.

WRITE FOR PARTICULARS

The Carriage You Are Looking For
Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1¾ in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Waterous "Trouble-Proof" Haulup Chains

The efficiency of your haulup depends directly on the strength and the wearing qualities of your log chain. Waterous Chains have more than their share of both. They are built of selected materials. The shop work on them is of the very best. They are tested and inspected before shipment.

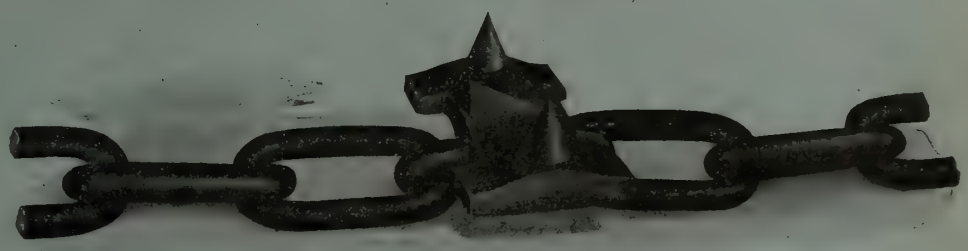
Next time you order—think of "Trouble Proof"—and specify "Waterous."

Waterous Forged Bull Chain

This chain is forged from the best refined wrought iron. It is 6 inch pitch and is built in seven sizes, ranging in weight from 2½ lbs. to 15 lbs. per foot. Iron, steel and wood specials of various forms are supplied with this chain. It can be used on all size Bull Wheels and is also adapted for Rough Wood and Refuse Conveyors.

Short Link and Long Link Coil Chain

For strength and general usefulness this chain is hard to beat. Fifteen sizes are built ranging in weight from 150 lbs. to 2,335 lbs. per 100 feet. Only the best chain iron is used in its manufacture, welds are exceptionally long and carefully made, and all links are tested for size and uniformity before leaving the shops.



Waterous All Steel Haulup Chain

The heaviest, largest logs can be handled on this chain. It is the longest lived and cleanest chain we build. It is 8 inch pitch throughout and carries a heavy cast steel special spaced every 6 feet. Side bars, centre links and connecting pins are all of steel, the links and bars being drilled for the reception of the pins.

We also build Malleable Log Chain, Roller Haulup Chain, Chain for Pulpwood and for Saw Dust Conveyors.

Any length can be supplied.

Our list of Specials, Sprockets, Idlers and Spools is exceptionally complete. These are are illustrated and described in our Chain Catalogue No. 108, which we will be glad to supply on request.

PEMBROKE - - - - - ONTARIO

MADE IN CANADA

It's a Pink anyway, you take it, and it's the best Peavey made.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

A Business Is Known by the Clock in the Hall

The progressive organization is recognized by its up-to-date methods, among which will be found the International Time Recording System.

Not only in the factory do we see this guardian of the employer's interests—but also in the hallway of the "front office."

The employer buys from his workers, their labor, which is represented by hours and minutes.

A Clock is the only logical method of keeping a record of this time.

Are you paying for hours and minutes which you do not get? Just consider a moment—then write for our booklet.

Carson Quality
Trade Mark Registered

A Harness Built for Hard Work

For lumber hauling and strenuous work in the bush a good strong harness is invaluable. And this "Carson" Quality" Michigan Lumber and Skidding Harness will stand every strain that can possibly be put upon it. It is made of the best No. 1 selected oak-tanned leather by the best of skilled workmen. The House of Carson stands solidly behind every strap and piece of material that enters into the making. It is the harness that is being used by the leading lumbering concerns throughout Canada. It has stood every test. It is the harness that you will want to protect your team and to get the most out of it.

Write us about your harness problems. Ask us for particulars and specifications. Ask for catalogue showing our full lines.

Kendall Gang Circular

The Machine that will convert your small logs into more and better lumber, quicker than ever before.

The illustration shows one of the latest designs of gang circular patented by Mr. I. N. Kendall, the well-known millwright, of Ottawa. This machine takes 16-26 in. diam., 10 gauge saws—will cut cants up to 8 inches in thickness, and we furnish with it necessary saw collars for any thickness of lumber desired. It has a hollow mandrel, water cooled saws; each saw has a separate guide; easily accessible and readily adjustable, and the bridge tree is so designed that it can be removed, the saws taken off and a new set put on in 7 to 10 minutes. Safety fingers hung just inside the front press roll prevent a cant flying back off the saws. Lumber cut on these machines is guaranteed to come out absolutely true to size from end to end, and so smooth that 1/16 in. over size is all the allowance necessary for finish.

Read what one user says about it:—

"The machine has given every satisfaction and in many cases far exceeded my idea of sawing lumber; the proof of this being that our customers are paying me $1.00 to $1.50 per thousand more for certain classes of lumber than they can purchase same quality elsewhere—this advantage being purely on account of the uniform and smooth sawing this saw is capable of doing."

We are the original manufacturers of these machines

We have been manufacturing them for the past fourteen years, and the experience gained in all those years is at your disposal. We make these machines in three sizes, as follows, using

26-in. saws for 8-in. cants, as illustrated.
32-in. saws for 10-in. cants.
36-in. saws for 12-in. cants.

Each size is of the very latest design and up-to-date in every improvement.

May we send you a list of satisfied users?

We also make a complete line of twin circulars with chain or steam feed for slabbing logs for these machines.

Does this Interest you?

SUPPOSE your stock has reached a low ebb—where your need for more stock becomes urgent.

Isn't it worth a great deal to have your order shipped just twenty-four hours after it is received?

When necessity requires such action, that is just the sort of service we can give you. Our big service yard at Logansport, Indiana, where we carry 4,000,000 feet of quality dry stock, makes such service possible.

Your order in our hands always means just this—Satisfaction for you.

How to Reduce Costs of Building

Buy our "Utility" grades of Siding (made in Sitka Pine or Fir), and Flooring (Fir only). They effect a 20% saving. They satisfy the contractor because no extra labor cost is necessary and consumers appreciate the receipt of **maximum value for their dollar.** If you have not used "Utility" grades, write us —no others produce them.

Why Uniform High Quality Distinguishes

LONG-BELL
TRADE MARKED
LUMBER

Lumber is graded according to firmly established rules and, when it is *fully up to grade*, it is high quality so far as that grade is concerned, no matter who manufactured it. There is, however, considerable latitude for quality variation within the limitations of grade requirements.

It is decidedly to the interest of the manufacturer, who trade-marks his lumber and timbers, to reduce the permissible defects in each grade rather than include them to the maximum. It is unusual care in grading that has caused Long-Bell products to be distinguished by their *uniform high quality*.

Southern Pine Lumber and Timbers; Creosoted Lumber, Timbers, Posts, Poles, Piling, Ties, Wood Blocks; California White Pine Lumber, Sash and Doors, Standardized Woodwork; Oak and Gum Lumber, Oak Flooring.

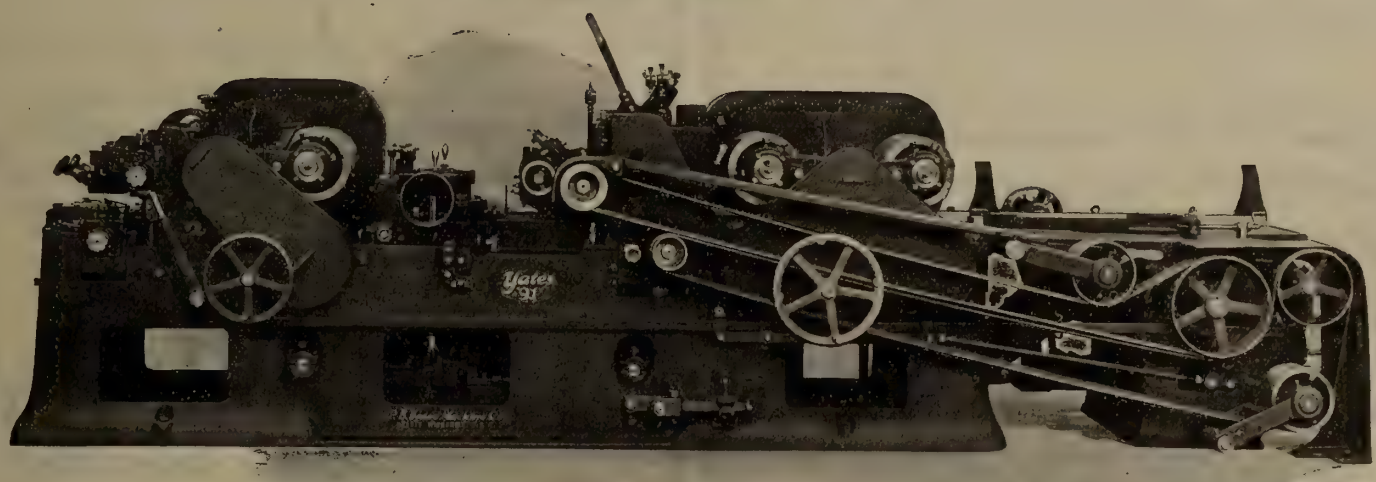
"The Matchless Matcher"

Yates



No. 91 High Speed Planer and Matcher

Talk to the owner of a "91"—see it in operation in his mill—ask the operator—one mill superintendent says "production and quality cannot be excelled and the upkeep is a very small item."

Ever since its introduction the "91" has proven its superiority, and is unequalled in its ability to take the roughest stock in the mill and turn out the finest grade of lumber. The larger mills have batteries of these machines.

Have you received our new "Planer and Matcher Booklet"?
A very comprehensive book on planers and matchers,
sent gladly upon request—no obligation.

FIRE BRICK

AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

Crescent-Ground

CROSS-CUT SAWS

MADE IN MONTREAL

Fast and easy runnings saws are a big help in the timber operation where production counts for everything. If the saws used are the best, it stands to reason that both the sawyer and boss are to reap the benefits. It has been proven that for falling or bucking the Simonds Crescent—Ground Cross—Cut Saw leads all others. It is made of the finest saw steel obtainable and holds its keen cutting edge on the hardest kind of work. Then, too, it is an easy running saw that does not bind in the kerf.

Write us about your saw requirements.

Single copies 15 cents.

"The Canada Lumberman" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills etc. "The Canada Lumberman" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and " For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Vol. 41 Toronto, January 15, 1921 No. 2

—An Industrial Tragedy—and Why?

In another column of the "Canada Lumberman" there will be found an interesting report of how a large and historic lumbering industry, involving an investment of over half a million dollars, has been forced to close down. This particular enterprise has been well managed and aggressively operated. It is splendidly equipped and afforded employment to hundreds of men, both summer and winter for over sixty years.

According to the veteran head of the firm, Mr. W. J. Sheppard, of Waubaushene, Ont., who enjoys the esteem and confidence of all his employees and associates, the sole cause for this cessation of activity is the system now followed by the Ontario Government in selling timber limits. The contention is that under the present method of disposing of berths by tender, exorbitant prices are paid by speculators, who have no intention of conducting logging or lumbering operations, or, if compelled to do so, take off only the best timber, literally plundering the holdings in an effort to make a quick clean-up.

The legitimate lumberman, who has been operating for years, knows the relative worth of timber and how it will serve his purpose. Based on an intelligent conception of its value, quantity, and availability, he can estimate what he can afford to pay for such limits. Practical experience has taught him that he must jealously guard his holdings from fire and get to work as soon as possible and cut every suitable tree to make the most of his possessions. He has a large sum of money at stake, and self-interest, if no higher motive, prompts him to adopt the most scientific and economical method of cutting and converting the entire bush into some form of merchantable product such as lumber, poles, railway ties, piling, pulpwood, posts, etc. He will not simply "skin the limit," and leave it in a littered condition, one that makes a second operation not only difficult but costly and unprofitable.

Mr. Sheppard is strongly in favor of the public auction plan of selling timber limits, and presents cogent reasons why the provincial authorities should revert to the former system. He maintains that the Government ran less risks and reaped a larger revenue out of this method than it has of late years under the tender system. Striking out straight from the shoulder he declares that the revelations disclosed in the recent timber investigation and the dishonest returns that have been made, along with the evidence of forgery and perjury revealed on the part of cullers, are enough to disconcert and discourage every honest lumberman, and that the latter has no show whatever against unscrupulous and unprincipled competitors.

Whether the present system of disposing of timber limits, scaling and securing returns has or has not been directly responsible for the grave irregularities that have been brought to light, it appears, at any rate, that more efficient and thorough means should be pursued, and every opportunity presented for legitimate and reputable lumbermen to secure available wooded lands without being handicapped or encumbered by purely speculative bidders or kite flying operators.

It is true that in many centres the sawmill industry is a decadent one. Location has much to do with future operations, and the plant at Waubaushene should, according to Mr. Sheppard, not have to shut down. In view of the efforts which have been made by his company to secure additional supplies of raw material, it seems a sad commentary that an important and widely-known unit of a great industry should literally starve to death in a province so rich and varied in its forest resources as Ontario. It is declared there is an abundance of raw material owned and held by the Ontario Government, tributary to the mill, which would keep the plant in operation for many years, and afford employment to hundreds of hands. A prosperous and busy town of nearly two thousand people who have comfortable homes and attractive surroundings—in fact everything that goes to make a community happy and contented—should not be permitted to becomes "a deserted village" as long as timber on adjacent Crown lands is available.

Let Confidence Prevail in 1921

With the close of one year and the beginning of another there is always much to look back over and a great deal to look forward to. Each new year stands out as a sign-post on the road to progress and development and each business man, in viewing the operations of 1920, seeks to learn wherein he came short on stock, service or statisfactory results. Having placed his finger on the weak points, he is determined that the coming twelve months will not witness any similar mistakes. True, he may not steer a clear course and may encounter many shoals, but he will not willingly run on any sandbars or snags charted during the past year.

It is, therefore, pleasing for the "Canada Lumberman" to record in connection with a wide correspondence and in personal interviews, a feeling of optimism, so fear as the lumber trade is concerned. It is recognized that the present is a testing time and that price recessions, dimished demand and lower production were bound to come. It was necessary in order to equalize and stabilize conditions.

It is now acknowledged that this has practically been accomplished, and there is no fundamental reason for continued depression. Restoration of public confidence and co-operative effort are urgently required at this juncture. When this is achieved business will be on a good, sound footing for 1921. It is not a question of shifting the blame or passing the buck. Each individual and every unit of the industry must do its share in bringing about the desired change.

It is well known that business moves in cycles and that every depression in trade carries with it or will develop its own remedy. It is declared that it has always been true during similar periods in the history of the world and naturally may be expected to apply again. Conditions are governed by circumstances and circumstances govern conditions, which is probably another way of stating that the law of supply and demand still holds sway. This clear and concise situation will never be changed any more than the law of gravitation can be repealed or ignored.

The year 1921 should prove a good year in the lumber business. It may not result in the large turn-over of the past year, or the net gains may not be nearly as great, but the time has come when prices must be more in accord with the trend of the times and each unit must

seek to play its part in the rehabilitation of the world and provide the mass of the people with proper shelter.

As soon as this movement finds natural expression and outlet, there will be a steady flow in the lumber trade. All obstructions, of an artificial, fictitious or sentimental character, must be removed. The end of the readjustment period seems now in sight. Leading exponents of the industry take a hopeful outlook, and, unless every omen is shattered and all indications are at variance, business will materially pick up with the advent of spring and gain in volume and variety as confidence reasserts itself, efficiency expands and thrift and industry are exercised.

The Harvest That Will N'er Return

A recent edition of the "Canada Lumberman" contained a timely article on "Let Canada Keep Her Pulpwood and Export Her Paper." It was urged that, if necessary, federal legislation should be enacted, setting forth that spruce and all other pulpwoods on private lands be not exported from the Dominion except in the nature of the finished product. It was further emphasized that the need for conservation is great and that the visible supply of pulpwood in Canada, even eliminating the element of fire, is not longer than 50 years.

Should Canada keep her pulpwood at home? Let the man who argues otherwise read the following reference from a special report issued this month by the Canadian Pulp & Paper Association. Here is the significant reference: "Unmanufactured pulpwood to the extent of 137,090 cords, valued at $1,948,241, was exported to the United States during November, 1919, compared with 60,098 cords, valued at $635,361, exported in November, 1919."

So far as pulpwood is concerned the increase is over 125 per cent. in quantity and 300 per cent. in value. Is it not high time that a halt was called in the denudation of Canadian forests for the benefit of American pulp and paper plants. Let Canadians build up Canada in the most comprehensive sense of the term. More self-reliance, national independence, native pride, public spirit, co-operative endeavor and wider vision will achieve the desired results.

Although there has been a drop in price of pulpwood, it is believed that quotations will never again recede to the former level. While there may be a temporary decline of a few dollars, still there is every confidence that values will hold for some years to come. There is no need for the settler or the farmer sacrificing his pulpwood. It is worth every dollar that he can get for it whether in the local or foreign market. He should realize that when his wood is all sold, his heritage or substance is largely disposed of, and that spruce is not a field crop or cereal that can be raised annually. Once gone, another harvest will not be reaped in the lifetime of the present generation. The settler, threfore, should have faith in himself, faith in the market and faith in the value of his wood. He is entitled to all that he can get for it and there is no necessity for bargain shouting or sacrifice sales.

Remove Every Vestige of Suspicion

It is charged that the Commission now investigating the Crown Lands administration of the province of Ontario is unfair and partisan. Biased reports have been presented and attempts made to cast reflections upon the character and efficiency of this branch under the late Government. Probably there never was a commission appointed to investigate any question affecting the welfare and interests of the people in which it was not alleged that politics was at the bottom of it all. This is an old cry and has ceased to be effective.

Much has been revealed so far by the Commission, and the probe should proceed until every vestige of suspicion, every shadow of doubt is cleared away. No matter who suffers, if there has been fraud and crookedness, the guilty should be penalized. Any of the concerns against whom charges are made and against whom civil action is entered to recover revenues belonging to the province, have recourse in the courts to establish all the facts and claim substantial damages from the province if wrongfully accused.

It is most important that the probe should continue. The great lumber industry as a whole has a clean bill of health, and if there are a few diseased members, they should be removed and isolated. In the best interests of Ontario, the present Government and even the lumber industry itself, it is highly desirable that there should be no turning aside in the work, which is only just begun. If it should be necessary to broaden its scope and dig deeper into past administrations and transactions, there should be no hesitation on the part of the authorities in seeing that this is done and done promptly, thoroughly and courageously.

Some Editorial Short Lengths

The New Zealand Parliament has appropriated $691,257 to be devoted to the development of reforestation and look after the existing Government forests. It is proposed to utilize at least 2,000,000 acres for reforestation at as early a period as possible, and this allowance is to assist in getting some of the land in shape.

* * * *

Building activities in the United States for November, according to statistics of 203 cities, as given in the last issue of the "American Contractor," show a recession of more than $20,000,000 from the October, 1920, total and an even 50 per cent. reduction from the total for November, 1919. For these 203 cities a total of 28,243 permits is given, the valuation being $74,098,500. Building permits in October totalled $96,172,999 for 191 cities. Of the cities for which comparable figures are available, 134 show a decrease in building activities; 52, an increase.

* * * *

Canada's ten commandments: Buy Canadian Products, this encourages home production; import only necessities, the difference in exchange costs Canada one hundred millions yearly; produce to the limit in field and factory; develop export markets, utilize Canadian services, manufacture raw materials to final stages in Canada, use science for development of resources, make quality the hall mark of Canadian products, be fair to capital.

* * * *

An official estimate of Canada's pulp-wood resources places the supply of all woods suitable for pulping in the province of Quebec at 360,000,000 cords; 150,000,000 are of spruce and balsam. In Ontario there are 250,000,000 cords and in New Brunswick there are 36,000,000 cords of spruce and balsam. The present annual rate of cutting of these two species is 5,750,000 cords, one-third of which goes across the border in its raw state, when it all might turn many wheels and build up many more industries at home.

* * * *

The price recessions which have taken place in many lines do not indicate a healthful decline in value but rather were forced through a lessened demand, in reality a buying strike. Even if the volume of trade increases and values are more or less stabilized, it is doubtful if the frenzied demand and soaring prices of the past months will prevail. Instead sane competition, coupled with greater efficiency and increased production, will rule. This leads to the thought that there may be a point beyond which it will be decidedly hurtful to all concerned for the buyers' attitude to continue. If it was the purpose of buyers to depress prices, this purpose has now been accomplished. It will do little good to force further curtailment of production or to compel a long continuation of the period of low production. In the long run, a decreased output inevitably means higher prices, not only because it reduces the ratio of supply to demand, but because it costs substantially more to produce small quantities of any commodity than it does large. A normal steady production of lumber at "live-and-let-live" prices is what we all want—what is best for producer and consumer alike—and the sooner all unite to bring about that condition, the better.

The great need of to-day in the lumber arena, as already indicated, is to re-establish a rational normal basis of buying, the stabilization of prices, production and consumption, and mutual confidence and co-operation. Unless there is a fair distribution of activity, and business is being done in every line, there can be no prosperity to divide.

Big Sawmill Dies of Famine in Land of Plenty

Large and Historic Plant at Waubaushene Forced to Close Owing to Inability to Obtain Raw Material Although Extensive Timber Limits are Tributary

With the continued successful operation of sawmills, it is necessary that there be an adequate supply of timber. The bush all along the frontier of the Province of Ontario has been cut and the land cleared. In order to secure supplies, the manufacturer must go farther and farther back and either remove the mills near the base of operation or haul or float the timber greater distances.

Every now and then one reads that a small and moderate-sized mill has shut down on account of the wood on its limits being exhausted, but it is not often that one hears of half a million dollar establishment, around which has grown up a town of nearly 2,000 people, having to close solely on account of inability to obtain the raw material when it is reported there is plenty of raw material owned by the Ontario Government, tributary to the mill. Yet this virtually expresses the state of affairs which has been brought about in the case of the Georgian Bay Lumber Co., Limited, of Waubaushene, Ont., which for sixty years has been a prosperous and progressive factor in the great forest products activities of the Georgian Bay district.

As stated in a recent issue of the "Canada Lumberman," this mill has gone out of business because the wood on its limits has all been cleaned up. Under the system of disposing of timber berths by tender during the past fifteen years, it has not been possible, according to Mr. W. J. Sheppard, the veteran head of the Georgian Bay Lumber Co., for the company to secure any fresh sources of timber supply, although there is plenty of good white pine in Ontario yet to be cut, sufficient to keep not only the Georgian Bay Lumber Company's plant, but others in operation for at least another generation.

The "Deserted Village" on Georgian Bay

The story of the inception, expansion and operation of the mill was told in the last issue of the "Canada Lumberman." It was then remarked that unless some new holdings were secured within a very short time, Waubaushene would become like Oliver Goldsmith's famous "Deserted Village." The merchants will have to move away, houses will become vacant, churches empty and schools unoccupied. Where once there was a teeming centre of life and purpose, there will be nothing but a memory of former days in this historic village, which is located on Georgian Bay in the East Riding of Simcoe County. The industry itself is in a position to saw logs up to the extent of 250,000 feet a day, and possesses all the towing, rafting and driving equipment to bring in the timber from any distance. The location of the mill is an admirable one and the last timber which was secured was the Dokis Indian Reserve bought from the Dominion Government.

Why is it that the company have not been able to obtain limits? Is it their fault, the fault of the present method of handling the sales, or the general laxity of administration which has characterized the department as revealed in the recent investigation and, in the evidence which has been heard from cullers and others, who have presented rather a sorry figure on the stand and revealed that they have taken false affidavits, sent in incorrect returns and, in a number of instances, worked for both the Government and the lumber companies. Even the Timber Commission, in an interim report, declared that these men had been guilty of both perjury and forgery.

Present System of Tender Is Handicap

Mr. W. J. Sheppard, president of the Georgian Bay Lumber Co., with which organization he has been associated for fifty years, when seen by the "Canada Lumberman," had some rather pertinent observations to make upon the present method of handling timber. He said that his views were in no way influenced by political party prejudice and were given solely from the standpoint of a lumberman and the lumbering interests. He has always been a staunch friend in the progressive development of the natural resources of the Province and strongly opposed to plunder or pillage in any shape or form.

"I am," he said, "a firm believer that the best way in which to dispose of timber berths or holdings is by the open bid, or public auction method. The auction sales of limits used to be attended by hundreds and resulted in lively competition, so that a good price was always obtained. Peter Ryan, the noted auctioneer, has disposed of as much as $3,000,000 worth in a day in the sale of limits. The system was changed by the Whitney Government, which abolished the public auction plan and substituted that of tender. By the former method each man, who secured a limit, paid a certain sum or bonus per square mile, and in addition the usual stumpage dues, which, under the old license system of 50 years ago, were 75c per M on white pine. The scalers were honest in those days, not serving two masters or making false returns. Our over-run on the logs averaged 38 per cent., whereas to-day some companies have been claiming over-runs up to 200 per cent.

Where Honest Operator Has No Chance

"How can anyone, who conscientiously returns 10,000 feet for 10,000 feet, stand up against competition of this kind? The honest lumberman has not a chance in the world against

W. J. Sheppard, Waubaushene, Ont.

such practices as have been followed by a few. Under the public auction system the bonus was payable before the license to operate was issued. A certain time limit was given and the timber must be taken off within that period or some valid reason presented why the license should be renewed. There would be many berths put up at once, and as the competition was always exceptionally keen if a man lost out on one, he could go after another a good deal harder. Generally before the sale was completed, he would secure, at least, one or two limits. He knew just what he could pay for them and could gauge his action accordingly. It depended upon how badly he needed the timber, where it was located, etc.

"In other words, a man, if he missed fire the first time, had other opportunities. To-day when limits are put up by tender, it is necessary, before anyone can make an offer, that a marked cheque for several thousand dollars be placed in the hands of the department On the limits on which we last bid, we had to put up $80,000 just for the privilege of tendering on two limits. I know of certain men whose tenders were accepted, at a figure much above what the average lumber manufacturer could pay for stumpage, and give an honest return to the Government. On top of this there are the dues which, on white pine, are now $2.00 per M feet. So many years are given to cut off timber and a large number of those

who bid are pure speculators or kite-flyers instead of being legitimate lumbermen. Their object is apparently to hold the berths for a certain time in the hope of disposing of them at a fancy profit. If they operate at all, in order to save their deposit, it means that only the best and richest timber will be taken off and the less profitable trees not cut.

Everything Was Done Above Board

"Now, what is the difference in the two systems? It has been charged against the public auction plan that Jones, Brown and Smith might get together and come to a secret understanding whereby one would say to the other. "Now, don't you bid on limit No. 1 and I will not go against you on limit No. 2, and when it comes to limit No. 3, we will let Smith have this." Such an idea is perfectly absurd because everything was done above board and there was no possibility of such a combination or understanding. There were too many men of reputation and worth who attended such sales.

"Of course," added Mr. Sheppard, with a smile, "there is not the slightest possibility whatever of men who tender in secret coming together and agreeing what they will pay for a concession! Oh, no! The method of disposing of timber berths by tender is open to any objection or weakness that the public auction plan had to face and besides has many handicaps, which I have already pointed out. In addition, there are other things that have to be taken into consideration. When a man paid $200,000 or $250,000 for so many square miles of timber limit, the Government had his money and held it. In case of fire, pest, hurricane or other visitation of a destructive character, the limit holder lost everything and the Crown was out only the stumpage dues. The result was that the owner of these limits got to work speedily, took out all the timber carefully, and systematically, and did not skin the forest or mine it, as is done in many instances to-day. The owner had to make every effort to secure as much as he possibly could out of his operation, and his methods of clearing were clean-cut and effective.

"To-day how different are matters under the tender system? If timber is wiped out by fire or destroyed by disease who loses? The Government. Why? Because it is out, not only the dues, but also the stumpage returns as well. By the auction method it was the lumber operator who lost in case of disaster. It is the Government to-day which assumes all the risk under the present system and the operator who escapes. Then many limits are held for purely speculative or kite-flying purposes and there is no incentive to log properly. To fell the best trees and make a clean-up in the shortest possible manner is the tendency, leaving much that would be cut by a progressive lumberman, who would cull the forest acreage to the best advantage.

"Another thing I maintain is that timber limits should be sold en bloc without any Crown dues, as the appointing of scalers, foremen, inspectors, managers and other officials to collect these dues costs the Province more money than is obtained in the revenue so derived. What good can accrue from a system that is so expensive and cumbersome, and open to many defects, fraud and perjury? The first cost should be the last cost. Then each operator would know where he is at and would not be open to the suspicion of plundering the public domain, robbing the province of its just receipts or exploiting the assets of Ontario for political, personal or predatory purposes.

"Honest measurement, honest administration, honest public service, honest development and effective and progressive methods of conservation and reforestation are what I strongly favor. The present method is open to too many underhand acts and places too much of a handicap or encumbrance on the legitimate lumberman. It affords too alluring opportunities for the speculator and the timber grabber, who has no other thought than that of becoming wealthy without doing any actual operating.

"The lumberman to-day has to earn his money and earn it hard. He had to take all sorts of chances with labor, weather, materials, transportation and trade. He runs great risks, faces unknown market conditions and has thousands of dollars locked up, whereas the wild-catter and the bird of passage have no interest at heart but their selfish aims.

Ontario Convention Will Be Greatest Ever

Fourth Annual Meeting at Hotel Carls-Rite, Toronto, Will Attract Representatives from Every Part of Province—Important Business and Social Features

The Fourth Annual Convention of the Ontario Retail Lumber Dealers' Association, Incorporated, will be held at the Carls-Rite Hotel, Toronto, on Tuesday and Wednesday, February 15th and 16th. It is expected that the attendance will be the largest in the history of the organization. Every effort is being made to see that nothing is left undone that will contribute to the welcome, instruction and benefit of the visitors. The members of the trade in Toronto will extend a most cordial greeting.

The management of the Hotel Carls-Rite, which has recently undergone extensive alterations and is well laid out for accommodating gatherings such as the Ontario Retail Lumber Dealers' Association, have assured the executive that everything will be carried out to make all the visitors comfortable and contented. The hotel is located at the corner of Front and Simcoe Streets and is convenient to the central station and all car lines in Toronto.

There are some important matters to come up and a large number of resolutions will be presented. Action has also been taken on several propositions during the past year. It is proposed to hold the annual banquet on the second night of the gathering, Wednesday, February 16th, and this function promises to be a signally successful and enjoyable one. A large number of new members have joined the O. R. L. D. A. lately and have intimated to Secretary Boultbee that they will be present at the gathering.

While all the details of the programme have not yet been announced, the following is practically an outline of the proceedings:—

Tuesday Morning, February 15th.

10.00 a.m. Registration of delegates and meeting of directors.
2.00 p.m. Annual reports of the president, secretary, Committee of Legislation and Transportation, Workmen's Compensation and Insurance, Membership, etc.

Wednesday Morning, February 16th.

10.00 a.m. Business session, general discussion, resolutions, etc.
2.00 p.m. Election of officers. report of special committees and general matters.
Evening—Annual banquet.

Will Be the Greatest Ever.

John B. Reid, of Toronto, president of the association, says that the retail lumber merchants of Toronto have made extensive arrangements for the entertainment of the visiting lumbermen. A splendid repast will be provided on the occasion of the annual banquet, as well as a most interesting and inviting programme. The best local talent will be included. "Come to this convention!" is the message of Mr. Reid to the retail trade. "We are going to have the livest gathering yet held. There are many problems to be discussed and we want to have a great get-together occasion."

The present officers of the association, the annual meeting of which will be held, as stated, on February 15th and 16th at the Carls-Rite Hotel, Toronto, are:

President—J. B. Reid, Toronto.
Vice-president—E. M. Barrett, Ottawa.
Secretary-Treasurer—Horace Boultbee, Toronto.
Directors—Thomas Patterson, Hamilton; G. P. Davidson, Ottawa; Chas. R. Robertson, Ottawa; D. C. Baird, St. Mary's; J. B. Mackenzie, Georgetown; J. C. Scofield. Windsor; A. R. Sanders, St. Thomas; W. M. Tupling, Orillia; T. H. Hancock, Toronto; T. E. Rathbone, Toronto; K. J. Shirton, Dunnville; F. E. Hollingsworth, Sault Ste. Marie; W. A. Evans, Sudbury; W. J. Atchison, Hamilton.

Shipments of Deals and Lumber Started Well

Nova Scotia Enjoyed Record Business in Early Months of 1920 But Drop in British Prices and Exchange Put Sudden Crimp in Export Trade

By Elihu Woodworth, Parrsboro, N. S.

Elihu Woodworth, Parrsboro, N. S.

The year just closed has been marked by sudden and unexpected changes in the conditions affecting the lumber trade in this vicinity. The season opened auspiciously. The winter's cut had been the largest for years, and large quantities of deals had been carried over from 1919. High prices still ruled in the British market and there seemed to be a good demand. It is true that the unusual vagaries of sterling exchange were disturbing, but a change for the better was expected at any moment. No one thought that exchange was likely to prove an important factor in the season's lumber trade.

The deal shipments from this port commenced later than usual in the season. The schooners of the deal fleet had gone south for the winter and did not get back as soon as they expected. One steamer took something more than three million feet which had been bought by the French Government before the war ended. All the other deals shipped went by schooners and the trade for a time was very brisk. Then suddenly the price in the British market took a tumble and the rate of exchange showed no improvement. The price continued to fall and deals could no longer be shipped at a profit, so the trans-Atlantic trade came to a termination after nearly twenty-seven million feet had been shipped. If the conditions had remained as they were early in the season the shipments to the United Kingdom would have been among the largest on record; as it is there will be an unusually large quantity of lumber held over.

In the United States the year of the Presidential election, or every fourth year, is proverbially a bad business one in the building line. No great demand for our lumber was consequently expected from that quarter; but Parrsboro exported nearly nine million feet of planks, boards and scantling, which is almost five million more than the exports to the United States in 1919. Probably some of the increase was due to improved transportation facilities, for when the British market closed, a fleet of schooners was available for the coasting trade. The piling exported, depended each year upon the quantity the shippers had on hand, for naturally they wouldn't carry any over if they could help it. The exports last year numbered 18,289 pieces as compared with 17,547 pieces in 1919. Only one firm exported laths in 1920, with a total of 4,201,800, or about three millions fewer than the exports of 1919.

The lumber cut this season is likely to be much smaller than last year's output. The gangs now in the woods are smaller than the ones that went into camp last year. Probably one-third fewer men are in the woods, and the outlook is so unsatisfactory that some of the operators have already brought their gangs out. There has been a reduction of, at least, twenty per cent. in the wages paid lumberjacks, and the price of some supplies has fallen considerably, but other commodities are still beyond reason and the prospect for the coming year is not encouraging.

Decided Decline in Wooden Shipbuilding

The greatest change of all has been in the shipbuilding industry. In 1919 the number of vessels registered at Parrsboro, N. S., were twenty-six, aggregating 10,704 net tons. Three of these vessels were small, registering less than one hundred tons between them, but the other twenty-three averaged 460 tons each. In 1920, five tern schooners and one four-master were registered with a combined net tonnage of 2651 tons, or an average of 441 tons each. A powerful little tug, which adds little to the registered tonnage, completes the list for the year. A sea-going tug of 700 h.p., which the Huntley's will launch next spring, was nearly completed in 1920 and might be included in that year's fleet, but that would scarcely help matters. The reduction of the output in 1920 is too evident, too clearly marked to be conjured away. And the worst is yet to come. The sadly reduced fleet of 1920 is not likely to have any immediate successors. With the exception of the tug mentioned there is no prospect of a single vessel being launched from the Parrsboro shore next season. In a shipyard near Parrsboro from which a fine schooner was launched last year, the keel for another vessel of similar dimensions was promptly stretched. By that time the condition with regard to shipping had changed so that the owners decided that they couldn't afford to build at current prices. They were reluctant, however, to quit after making a start, so they told their shipwrights that if they would consent to a cut of fifty cents per day in the rate of wages they had been receiving, they could continue working until the vessel was finished.

This proposition was rejected by all the men employed in the yard, so the keel was covered and the yard closed. That yard is likely to remain closed a long time for it is fairly certain that the keel will rot where it lies before the owners make such another generous offer. It is quite possible that some of the men concerned would be glad now to accept the terms they once rejected, and it is probable that they will have to agree to a reduction of, at least, a dollar a day on this year's wages before they can secure permanent employment. In fact, it is extremely doubtful whether permanent employment at wooden shipbuilding will ever be found again in this part of the province.

Many Vessels Made Big Money

The value of vessel property decreased rapidly during the latter part of 1920. The vessels produced through the revival of wooden shipbuilding filled a magnificent want and are still needed, but they cost too much. For that reason the small fleet turned off last year, although first-class vessels, can scarcely be regarded as good property. Vessels built in the early days of the revival have done well. They cost less to build than the later ones and they got the benefit of the phenomenal advance in freight rates. They all made money and some were soon able to pay for themselves. The vessels built in later years were not so fortunate. The cost of construction, both in labor and materials, was steadily advancing and it cost more to sail the vessels after they were built.

On the other hand the chances to earn money quickly no longer exist. The drop in freight will make it extremely difficult to earn the money the vessels cost. In some cases it will not be easy to pay running and interest on the cost of building. Vessels that have already paid for themselves may earn money, and those that have paid part of the cost of building may pull through, but the outlook for vessels turned off last year is not encouraging. There is no prospect whatever of any immediate advance in freights, and it is not at all probable that they will ever again reach the heights to which they recently attained. The conditions, which caused such abnormal rates, have so completely changed that even another great war could not produce similar results.

Prices Destined to Come Down

Parrsboro and vicinity have hitherto been able to furnish abundant employment for all who wanted it, but it looks now as if those who want work hold out for the same rate of wages they have been receiving. And this at a time when some essentials are at their highest. Certain prices are falling, but others, such as fuel, poultry, eggs and butter are higher than they have ever been before. This seems unnecessary, and it looks as if the farmers as well as the "Big Interests" do not object to a little profiteering.

This is a period of organizations and prices must come down. Probably some may never drop to pre-war level, but they must get lower than they are at present. Many men of the laboring classes have had more money during the last few years than they ever had before, and this fact has had something to do with the rapid increase in prices. Much of this money has now been spent and in many cases none is coming to take its place. This may influence a reduction in prices. We cannot tell what the future has in store, but according to present indications the whole world is going to experience a trying winter. There is a woeful lack of employment and little money to spend foolishly, so the natural consequence is that prices will come down.

How Lumber Conditions are Shaping in Quebec

Limit Holders Desire Modifications of Certain Cutting Regulations—Exporters are Going Slow With Production While Stocks in Storage are Large

A deputation of limit holders and manufacturers of pulp and paper waited on the Quebec premier, Hon. L. A. Taschereau, and the Minister of Lands and Forests, Hon. Mr. H. Mercier, recently, in regard to Article 12 of the forest regulations and the increase of stumpage dues.

This is the second deputation of lumber interests to approach the Quebec Government in connection with this question. The first interview took place on November 18, when a large and important delegation interviewed the Provincial Government in executive council session and presented a memorandum which requested a revocation of the changes made in Article 12, which forbids the licensees to cut on Crown Lands white or red pine, etc., measuring less than 13 inches, and other trees less than 12 inches in diameter.

The subject matter of this interview with Premier Taschereau and his cabinet colleagues, was fully reported in the "Canada Lumberman" of December 1st. Since that time the Government modified Article 12 so as to permit tree cutting under the 13 and 12 inch diameter, with the proviso that the inspection warranted, and have been studying the modification of the tariff as promised, and is still under consideration. This seemingly did not satisfy the pulp and paper limits holding interests, who decided to get together and form a second delegation. The latter met in Quebec, and waited on Hon. Mr. Taschereau and the Minister of Lands and Forests, Hon. Mr. Mercier, on December 14th. This deputation was composed of representatives of the following interests: The E. B. Eddy & Co., The Bathurst Lumber Co., The Lachine Lumber Co., The Edwards Co., The Belgo-Canadian Pulp & Paper Co., the Howard-Smith Paper Mills; The Richardson Co., the St. Maurice Pulp & Paper Co., the Lake Megantic Pulp Co., the Baie des Chaleur Mills Co., the Tourville Lumber Co. the Hawkesbury Lumber Co., La Compagus Champous, The Henry Atkinson Reg'd., the St. Maurice Lumber Co., J. R. Booth, McLachlin Bros., and the MacLaren Co. The deputation made the same request as the preceding deputation and impressed upon the Prime Minister the urgency of their demands in connection with the present state of the Canadian lumber and timber market produced by the close in demand for Canadian wood.

While the Quebec Government is inclined to look with favor on the request made by the lumber interests, in view of existing trade conditions, the ministers do not take the same view in connection with the pulp and paper manufacturing interests, on account of the large profits made by the latter and the high prices they obtain for the manufactured article. The Government is well aware of the crisis the lumber and timber interests are passing through on account of the slump in prices and scarcity of demand not only in the United Kingdom markets but the United States and Canadian markets. The amount of capital tied up and banking conditions are well known as well as the difficulty of curtailing production, a reduction of staff, etc., would lead to demoralization of organization which would be difficult to replace if once disturbed, and, therefore, the Government seems well disposed to help out the timber and lumber interests, and aid them in their present period of depression.

The timber and lumber interests of Quebec, who are closely watching the market in the United Kingdom, admit that they do not as yet see sufficient signs of encouragement which would impel them to go ahead in the work of normal encouragement for next year's market. They learn from export British sources that though the imports to the United Kingdom in November were moderate and the consumption fairly good, that business was dull and restricted, and that the stock holdings of wood of all varieties had only been slightly reduced, and little or no buying. The settling of the coal strike has tended to stabilize industrial interests; nevertheless, there are still disquieting factors to be ameliorated and, until these latter conditions are cleared, it is wise to emulate the United Kingdom importers and go slow with production, especially with the stocks of manufactured lumber in storage in Canada. In keeping with the market conditions abroad, the Quebec lumber interests have come to a concrete understanding to curtail the cut in the woods and mill operations this winter. It is astonishing the same effect the present conditions are having on the mentality of labor, who realizing the intention of the curtailment in manufacture, means less demand for their services, are submitting to a 20 per cent. decrease in their wages.

The pulpwood situation is beginning to look far more encouraging, and the Quebec dealers and exporters to the United States pulp and paper mills prognosticate a reaction early this year. It is plainly evident that the United States mills, who stopped buying some time ago, are in need of pulpwood, as their stocks are dwindling. In the meantime the price of this wood has dropped considerably from $32.00 to $28.00 per cord, delivered at the mills, which is now the prevailing figure, and the Canadian exporter will have to meet the 35 per cent. increase of rail freightage. Cheaper pulpwood has also cheapened labor to the extent of 25 per cent., and the Quebec dealers, having closed down some of their rossing mills, insist upon a further reduction, especially as the labor market is getting easier. It is thought in some well-informed circles that the price of pulpwood will go higher, probably up to $32.00 per cord, before the end of February. It is reported that the stocks at the United States mills will have by that time become so depleted as to cause a spirited reaction of demand for the wood. In the meantime, the trade has got a jolt from the Federal Inland Department that is causing them some concern. They have recently received an undated circular letter from the department, informing them of an excise tax of one per cent. on pulpwood, which was heretofore exempt. When the alphabetical list of articles subject to excise taxes, and list of exemptions from sales tax was received in July last, pulpwood appeared in the list as exempt. Now to the great surprise of the trade, the Inland Department has sent out a circular informing the trade that a one per cent. sales tax bill will be imposed. This letter was received from the department about the middle of December by the Quebec dealers and reads: "You are advised that pulpwood as well as wood pulp, is subject to a sales tax of one per cent. to be added on invoices as excise; that is to say, that when the wood is sold and delivered at the mills, and the amount of freight, known by freight receipts, is deducted, a tax of one per cent. will be imposed and this applies to Canadian mills, the purchasers of the wood who will have to pay the tax. It also applies to every purchasing transaction, the jobber from the farmer, who will have to pay the one per cent. on his purchase, and the dealer from the jobber. Thus it will be seen that the excise sales tax is liable in every purchase transaction even to the mill purchaser. The tax will amount to a very large amount and hits the trade hard. The general opinion is that the sales tax on pulpwood is outrageous, especially at the present time, when the lumber trade and also the pulpwood business are facing a crisis.

FABLE OF LIKELY YOUNG LUMBERMAN

There was a Young Fellow once who was a Likely Candidate for the Gloom Club.

He was a Lumberman by trade, and when the Populace talked widely about Going Easy on the Pocketbook till after the holidays, he had what was alleged to be a Thought that Mourning was in order.

He had an Inspiration that was Ingrown, and it Hurt.

He lost no time in Squealing.

He draped his Soul in Black and Wept for the Late Lamented Prosperity

While he was Engaged as Chief Mourner at the grave of old Pop Prosperity, the Gloom Squad kept dinging in his Ears that the undertaker was putting the Finishing Touches to Business.

Finally the Likely Candidate with the Ingrown Inspiration was waked up by his own Sobs and he discovered that all the other Mourners had Beat It.

When he got Hep to himself and looked around, he saw the Populace back at the Old Stand, and a bunch of Bright Young Fellows running off with the Orders.

Moral—Perspiration beats Ingrown Inspiration to the Business.

—The Gloom Chasers.

GREAT THOUGHTS ARE NEVER LOST

Every brain is a field where nature sows the seeds of thought, and the crop depends upon the soil. Great thoughts are never lost, and words of kindness do not perish from the earth.

—Robert G. Ingersoll.

Australia Can Supply Canada with Hardwoods

Is There Any Reason why the Commonwealth Should Not Purchase It's Softwood Requirements from the Dominion?—Valuable Woods Grown in Antipodes

By Western Australia Correspondent.

The British Empire Forestry Conference held in London in July last marked an epoch in the forestry affairs of the Empire. It was an open declaration that Great Britain had, at last, come to realise what a plentiful supply of indigenous timber meant to a country, and it was a recognition of the patent fact, if the Empire's future timber welfare is to be studied, immediate steps must be taken to make the Old Country and the Dominions independent, as far as possible, of the products of foreign forests. Great Britain and most of the overseas possesions have for long been purchasing more or less foreign-grown timber, and few, if any, of them have cared to enquire whether the purchases made from other nations could not have been equally well, or better, made within the Empire. The circumstances of the day—the inevitable aftermath of an exhausting war—suggest that British national economic advantage will best be served by adherence, as far as may be, to a policy of interchange of commodities between the various sections of the Empire.

Why not Softwoods From Canada?

Canada has softwoods to sell; why should not Australia buy its softwood requirements from Canada? And, again, is there any unsurmountable reason why Canada should not draw her supplies of hardwoods from Australia? There are already very considerable trade relations between the two countries. In 1913 Australia exported to Canada goods of various classes to the value of £169,000 and Australia bought from Canada goods of many kinds valued at £1,158,000. With regard to timber, in the year named Australia imported timber from outside sources to a value of £2,922,000, but of that large sum, only £95,000 seems to have been expended on the products of Canadian forests. On the other hand, Canada's imports of Australian timber were negligible. Both countries are very large timber growers, they are both units in the same Empire, and it would certainly appear that there is much room for closer trade relations, more particularly in timber.

Definite Ideas Regarding Resources

The existing uneconomic position in the matter of trade interchange between the various Dominions is due in no small part to the general want of definite ideas on the part of each regarding the resources of the others. It is also partly due to a certain innate British conservatism, which does not trouble to reconsider arrangements which have worked fairly well in the past unless weighty reasons are adduced for making a change.

We, in far-off Australia, are aware that Canada must use a very considerable amount of hardwood in the course of a year, but we are not at all sure that a majority of her timber users have clear notions as to the extent of Australia's hardwood forests, nor of the nature and capabilities of these hardwoods. According to figures published in the Commonwealth Year Book there are over 102,000,000 acres of forests in Australia. But that figure has been seriously travestied at more than one Australian Interstate Forestry Conference. It includes "sparse" forests and a good deal of partially timbered scrub. The real area of merchantable and accessible forest is probably about 75,000,000 acres. The figures as to exploitation give a better idea of Australia's timber capabilities. In 1913, the figures were as under:

	sup. feet
New South Wales	164,899,000
Victoria	81,770,000
Queensland	156,634,000
South Australia	2,342,000
Western Australia	218,908,000
Tasmania	60,780,000
Commonwealth	685,333,000

Of the six Australian States the only one that caters largely for the foreign market is Western Australia. In 1913 the value of timber exported was over £1,000,000 and since exportations began, to the end of June, 1920, timber to the value of over £16,000,000 had been sent abroad, and the figures given do not include sandalwood, nor tanbarks, gums and resins.

Jarrah and Karri Lead

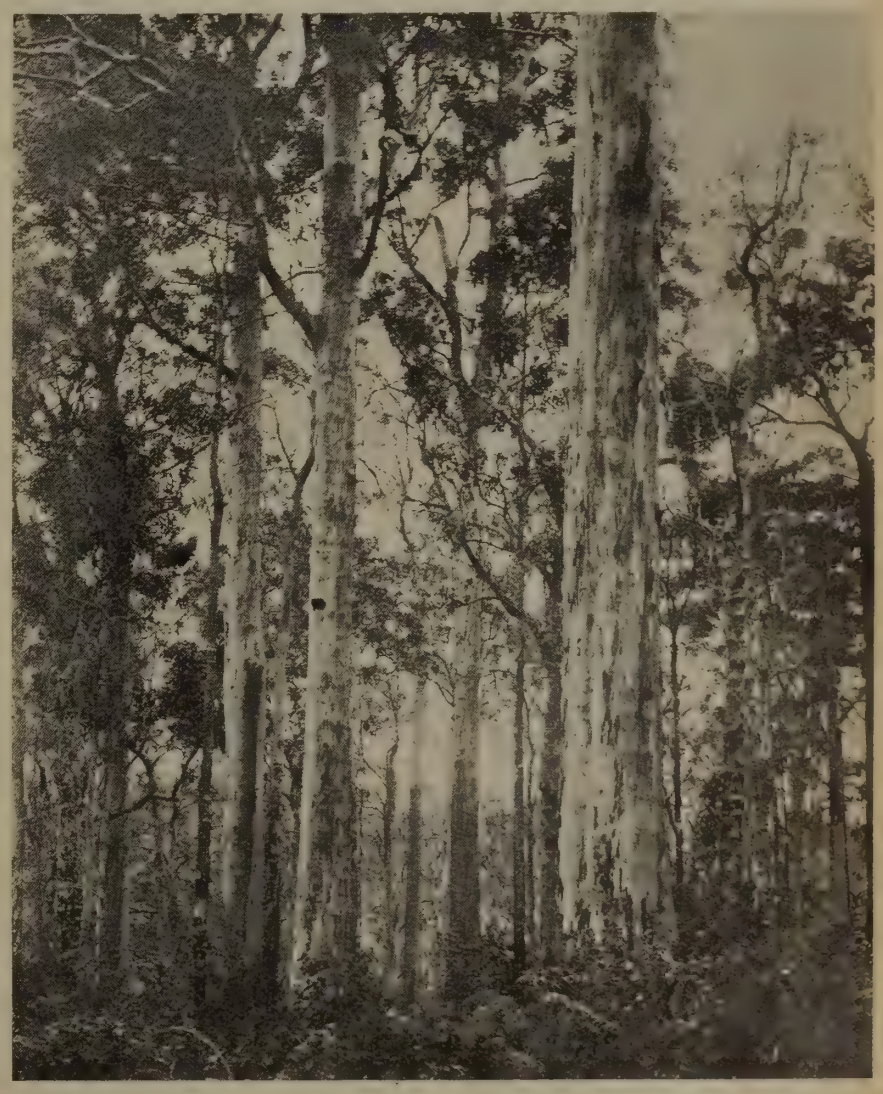
The term "hardwood" is a relative one. In some countries timbers are classed as "hard" which would in Australia be put in the soft or medium classes. It may be said generally that Australia's main timbers—many varieties of eucalyptus—are unusually dense and heavy. In Western Australia some are particularly so. That state's principal commercial timbers are jarrah and karri, the main physical properties of which may be taken as closely applicable to many of the others. Jarrah furnishes the following results:

Weight per cubic foot (green)	68 lbs.
At 12 per cent moisture	55 lbs.
Transverse strength (per square inch)	15,000 lbs.
Tensile strength (per square inch)	15,500 lbs.

For karri we have:

Weight per cubic foot (green)	72 lbs.
At 12 per cent. moisture	58 lbs.
Transverse strength (per square inch)	17,300 lbs.
Tensile strength (per square inch)	18,750 lbs.

In Western Australia jarrah and karri are used extensively in constructional work of all kinds, including bridges, wharves and jetties. The first named lasts remarkably well in water and in the ground, and in the museum of the Forests Department are many



A splendid Karri forest in Western Australia

examples of it which have been in the ground or in the water from 40 to 60 years and more, and exhibit no signs of failure. Karri for above ground construction is equally as serviceable as jarrah, and its somewhat greater strength recommends it for beams, pillars, etc., in buildings designed to carry heavy weights. The great size of the karri tree permits of beams of exceptional length and section being obtained.

Take and Retain High Polish

For furniture and decorative purposes both these timbers possess the highest qualities. Their rich mahogany colour compels admira-

tion and they both take and retain a high polish. They are used largely for these purposes in Western Australia, and their value in these directions has become more generally recognized since war conditions put a period to the importation of foreign decorative woods. In the Empire Timber Exhibition in London in July last no item attracted more attention nor elicited more admiration than a panelled room of jarrah, a complete suite of carved furniture, with table and antique chest all of the same timber.

In another article more will be said about Western Australian hardwoods and their capabilities. At this point a word about forest exploitation in Western Australia may interest Canadians, whose preoccupations are concerned with forests and timber. Just two years ago a Forests Act came into force, and under it all work in the forests is carried on, except on certain concessions and special leases of large acerage, granted many years ago but now approaching

Log hauling in a Jarrah forest in Western Australia

their respective periods of expiry. On these exploitation is conducted in terms of the special agreements. Under the Act exploitation is carired on under a system of permit, the Forests Department receiving a royalty of 2s. per load in the round, except in a few special items of which a higher royalty is charged.

Sawmills Cut Orders of Any Size

There are 80 sawmills in the bush (forests) of varying capacities of output. Some of these plants own many miles of railway running into and through their permit areas or leases, etc., and quite a number of them possess respectable outfits for the repair of machinery, rolling stock and so on. At one mill there is an engineering plant capable of building locomotives. Certain standard or stock sizes are cut, but all the mills are prepared to cut orders for any size. Roughly speaking, one-half of the Western Australia cut is exported principally from the ports of Fremantle and Bunbury.

The great majority of the sawmill plants in the bush are run by private firms or companies, but, of recent years the Government itself has gone into the busines of sawmilling. The State Sawmills Department operates several large plants, as also does the Railway Department, and the Forests Department is also about to open a mill on a special class of timber. All these official plants work under permit as provided in the Forests Act, and pay royalty to the Forests Department, just as privately owned mills do. In further notes mention wil be made of methods of converting timber, labour conditions, reforestation and new planting activities, sandalwood and tanbarks, oils and other products of the Western Australian forests.

Looking to Future Supplies of Lumber

Fifty years ago the wholesale destruction of the forest wealth of the province began to worry seriously the fathers of York county, Ontario. They foresaw the time when the supply of lumber, not only in their own county, but in the province, the Dominion, and even the continent, would be exhausted if forest wastage continued. They petitioned the Government to enact stringent laws to put a stop to the very rapid and extensive destruction of the forests, and many other counties, following their example, did likewise.

The York fathers were of the opinion that forest conservation would be "a manifest benefit both to the climate and agricultural interests of this country." They saw in the depletion of the forest a serious menace to the industrial life of the country. The warden at that time was William H. Thorne of Holland Landing, one of the leading millers in the province, and many of the other members of the council made their livelihood from mills operated by waterpower.

Even then the small streams were beginning to dry up. Freshets grew stronger every spring as the forests disappeared, and the yearly toll of dams washed away, never to be rebuilt, was growing greater. Small villages that had grown up around small waterheads were beginning to decline. If the valleys of the Don and the Humber, the Rouge, the Holland and the Black Rivers were to continue to be hives of industry the forests must be saved.

Thus the agitation for conservation of forests began. Now there are no stretches of forests to conserve in the metropolitan county. But as the old York fathers set the example in trying to conserve the forest wealth, the present York councillors will set the example in re-establishing the forests. At its session this month York County Council is practically sure to vote large sums of money for the reforestation of large areas in King and Whitchurch townships, as a distinctly commercial venture to provide lumber for the future.

New England Cuts 1,500,000 Xmas Trees

More than a million and a half Christmas trees of evergreen, spruce, fir and hemlock were cut this season in New England, for the homes east of the Mississippi.

Statistics on the cut, which are fairly complete, show 600,000 trees from Maine, 300,000 from Vermont, about 500,000 from New Hampshire, 75,000 from Massachusetts and 25,000 from Rhode Island and Connecticut combined. On the stump these trees were sold by the woodland owners or farmers for a few cents each, large lots selling at $25 and $30 a thousand.

Selling Lumber Below Producing Cost

Hundreds of sawmills in the principal producing regions are making sales at prices at, near, or even below the cost of production. This is not an unprecedented situation, but follows an effort to maintain organizations intact. While curtailing output, manufacturers are also seeking to be in a position to meet demands expected in the course of a few weeks. Costs, including wages, have been reduced until bedrock has been reached and greater reduction is not practicable. In the south, for instance, lumber is costing approximately $37 a thousand feet to produce; in 1914, the cost of production was $14.50.

Lumber Market Situation Summarized

The holiday period is invariably dull in the lumber manufacturing industry due to shut downs of plants for repairs and inventories. Shipments and orders are light because of the seasonal cessation of building and the lack of demand upon retail distributors. The present season is abnormally dull since liquidation is proceeding in all lines and a marked aversion is shown by business men generally to make commitments until more promising conditions are seen.

Production of lumber is about 60 per cent. of normal; shipments closely approach production so that the volume of stocks is not substantially increasing. Further reduction in output will occur in the next few weeks through the closing of more mills in the south and west. However, resumption of building early in 1921 it is believed must result in an active demand on the sawmills, and operators for the most part are optimistic.

Manufacturing Bread from Sawdust

Until quite recent times sawdust was regarded in wood mills as a waste product. Now it serves many purposes and has a commercial value of something like ten shillings a hundredweight, says Pearson's Weekly.

Sawdust is particularly useful in the manufacture of various building materials. Mixed with clay it makes splendid tiles and bricks, while combined with concrete an economical and good-wearing flooring material is obtained.

To French chemists belongs the discovery of sawdust dyes. They found that a combination of various chemicals acting upon sawdust produced a substance which is said to be quite as effective as the best aniline dyes for coloring purposes.

In Germany during the war a huge amount of sawdust was used for making bread. It was first treated with chemical agents to extract certain harmful ingredients, after which it was mixed with flour and baked in the usual manner.

Probably the most remarkable discovery of all is that a gas, excellent both for lighting and heating purposes, can be made from sawdust. From experiments that have been conducted in America it is believed that, particularly in the neighborhood of sawmills, the gas could be produced so cheaply as to be supplied for a few pence per thousand feet.

Western Retailers Hit Mail Order Firms Hard

Lumber Merchants Put Up Strong Fight Against Catalogue Competition and Agree Upon Definite Course of Action—Genuine Co-operation

The members of the Southwestern Ontario Retail Lumber Dealers' Association are going to fight the mail order and catalogue houses and in a way that will be effective and aggressive. For some time an organization known as the Halliday Co., Limited, of Hamilton. Ont., have been flooding the western portion of the province with literature and offering many alleged bargains in doors, window frames, sash, interior trim and exterior fittings. The company have been intimating that they are offering special bargains that cannot be duplicated and, by inference, letting the recipients of their illustrated catalogues form the impression that the retail lumberman have been getting too large profits, etc.

At the last regular meeting of the Southwestern Ontario Retail Lumber Dealers' Association, which was held in Chatham, Ont., a few weeks ago a special committee was appointed to meet and consider the situation arising from this mail order business and bring in suggestions regarding the best way that the competition should be met and any business, now going to the Hamilton concern retained for the legitimate dealers in lumber and general wood working lines.

The committee appointed was composed of E. C. Russell of Walkerville, J. C. Scofield of Windsor, J. C. Wallace of London, and M. R. Bogart of Chatham. The country has lately been flooded with more literature from the Halliday Co., which seemed to aggravate the situation somewhat, the door offers being particularly low.

Before the committee of the S. O. R. L. D. Association met in Windsor recently each member at the suggestion of Mr. Scofield had a conference with the retailers in his own district to learn what they were prepared to do to combat the mail order propaganda. Suggestions were invited. The committee held a meeting in Windsor to discuss the matter from various standpoints and to endeavor to find a solution for the problem.

"Special Bargain" Sheet Reviewed.

The special bargain sheet was first carefully considered and it was decided that this did not fairly represent the regular offers of the company, as outside of a few good doors, the balance of the material seemed to be more or less dumped stock. The principal bargain on the sheet was an oval glass door and which, as Mr. Scofield expressed it, could not be disposed of in Windsor at any price whatever. It was also thought that this sheet might simply be an endeavor on the part of the Halliday Co. to revise a mailing list, as any inquirer might be told that the particular bargain had been disposed of but they would have the name of a good prospect for their new spring catalogue.

The committee spent some time on the catalogue proper, Mr. Scofield having prepared a schedule of the prices being offered to the public by this concern and a comparison made with the regular prices in Windsor, and while some were found to be below the market price many were really higher than had been prevailing at any time during the year.

The members also discussed all kinds of schemes, particularly that of distributing a circular setting forth the comparison of service. It was decided that anything of this kind would simply be an additional advertisement for the mail order concern and was not advisable.

The one factor to be considered was that retailers of lumber were obtaining legitimate prices from 90 per cent. of the trade and the Halliday business now only represented about 10 per cent. or less, and it was not wise to make any special reductions to meet the Halliday prices, for this small 10 per cent.

The principal trouble the committee found was that each seemed to have a different problem to solve in this connection. For instance in Windsor, where the dealers depend entirely upon the city trade, the trouble was with the contractors purchasing from Halliday, while in Chatham, where local lumber merchants depend only upon about 50 per cent. for the city trade and the balance for the farm trade, it was the owners who were purchasing from Halliday and hiring contractors for the labor only. In such places as Tilbury, Glencoe, etc., where retailers depend almost entirely upon the farm trade for their business, the situation was again different. It thus seemed to be a matter for each city or community to arrange for themselves.

The committee, however, makes the following recommendations:

1. That the dealers in each city or community meet and arrange a definite course to pursue in this connection, the basis of all being genuine co-operation.

2. That the price list for each such city or community be changed just as soon as market conditions warrant it, so that the public can be shown that no exorbitant prices are being charged, and endeavor to make these prices as far as possible the same in all sections.

3. In order to make an intelligent reduction on the price list it is felt that some steps should be taken towards obtaining an exact cost of mill work, and even of yarding for the lumbermen without mills, as this was the basis on which all reductions should be made. We all know just how much the invoice cost of the materials consumed are, and the actual cost of productive wages paid on any order, but how much to add to the invoice cost and what percentage to add to wages to take care of the nonproductive wages, insurance and the hundred and one other items entering into an accounting of this kind, is a decided problem. We feel sure that the Halliday company could not operate even this length of time if actually selling below cost, and if we were positive about what our products were costing we would perhaps make a more intelligent price list.

Your committee found that no two of the factories represented had the same ideas or the same methods of determining costs and it is suggested that, as a preliminary to any adjustment of prices, it would be advisable to call a meeting of the whole association and invite each man to lay his cards on the table and tell what methods he is using to determine mill costs. It is not a matter to be left to a superintendent or a clerk but for headquarters. If he has the method he should be convinced that a time is coming when his whole stability will rest on this point; if his present method is a faulty one he should be glad to have it discussed and corrected, and if his method is a good one he should be glad to share it with others as he will in the end reap the benefit. The man with no system or a poor system is a menace to the whole lumber association. It is realized of course that no two factories are subject to exactly the same conditions and the same overhead expense, but certain general rules should apply and be worked out to advantage of each individual.

4. Arrange to let any Halliday purchaser look after themselves. that is, not to supply the skim milk of the bill and have Halliday collect the cream. This can, of course, be explained in a nice way to the customer; if possible before purchasing, showing the unfairness of such dealing and making it compulsory either to place all of the bill or none with the out-of-town concern.

Contractors May Become Good Allies

Let the members of each city or community arrange among themselves to personally take this matter up with the contractors dealing with them protecting each others' customers, of course, and making it a rule not to sell to any contractor who is using Halliday material for a portion of the job, for which he is the contractor, regardless of who had purchased it either himself or the owner. This seems really to be the key to the whole situation, insomuch as no one will buy, materials which a contractor will not or cannot assemble or use for the purpose for which they have been purchased. Most contractors are heavy debtors of the lumbermen and are in a position to be dictated to regarding such matters, and, when they find that it will do them no good to run from one mill to another, and that all lumbermen are a unit in this matter, they will have to become our allies in controlling this situation.

5. A revision of the usual terms on which lumber is sold either to the contractor or customer, if they can afford to pay the mail order houses in advance, why not some inducement be made by the lumbermen to get his money in advance even if a special discount or concession has to be made. it would be an inducement towards a good end and possibly would lead more to a cash business. The man who is prepared to pay the lumberman cash in advance should be shown

some consideration over the credit purchaser who adds to the overhead in booking and collecting his account.

The object of the committee meeting was simply to discuss ways and means toward meeting the Halliday business and, when it was found that nothing suggested would apply in the same way to the whole Southwestern territory, it was thought best to again bring the matter before the meeting as a whole and have these recommendations discussed, enlarged and something adopted before the next year's business begins.

Conference With Some Supply Firms.

The committee also took up the matter regarding the source of supply of the Hamilton concern and talked over ways and means of checking this evil. It is understood that the Ontario Association is also taking this question up and a special committee will wait upon a number of firms who, it is alleged, have been transgressors. The names of several firms were mentioned and, as the retail lumbermen are all large purchasers from these manufacturers, it will be pointed out to them what an injustice is being done to the legitimate trade in pursuing the course that they are doing at present. It is believed that the offending concerns will see the fairness and candid nature of the proposition which will be submitted and cease doing business with those who are not logical or natural distributors of wood goods.

Montreal Lumber Dealers Differ on Trade Vision

The lumber trade is now passing through a period of depression, says a Montreal correspondent. A few members of the industry are avowedly pessimistic as to the immediate outlook—they cannot see any relief from the present condition of inactivity. The reaction in values, the loss on goods purchased at high prices, and above all, the small demand have combined to affect their mental vision.

On the other hand, a majority of men believe that the depression is temporary, and that as the industry is intrinsically sound, there is no reason to take a gloomy view of the situation. And they are right.

While lumber did not advance to a ratio corresponding to that of the majority of commodities, it was only to be expected that lumber values would react in sympathy with the reduction in practically all lines. The public will not buy on a falling market, and thus we have witnessed a great slackening in the demand. The depression was probably deepened owing to the almost sudden decline in values. Many astute lumbermen believed that prices would hold until well into 1921, and were not prepared for the quick falling off in demand and the recession in prices.

Taking all the circumstances into consideration, there is no warrant for being pessimistic. There may not be a buoyant market this year, but we can, at least, look for a moderate amount of business and at better prices than those prevailing. Canada still needs thousands of houses, and there is reason to believe that, with smaller labor costs due to the more plentiful supply of men, the building programme will not be below that of 1920.

Optimism and pessimism are contagious. We are apt to make more of our troubles than of our successes, and to exaggerate our disappointments. The promulgation of the gospel of gloom is calculated to damp enterprise, to lead to the closing of factories, and to make conditions more unsatisfactory than they now are. More and yet more optimism is demanded, for it is in this direction that we must look for a relief for the present situation.

More Advanced Courses in Forestry

No fewer than six applications for post-graduate work in Forestry have been received by the Faculty of the University of Toronto during the past year.

In each case, the applicant is already engaged in research work in some aspect of forestry or allied subjects and desires to make even better preparation for such investigations by taking additional work at the University.

But—and here's the rub—these men had to be turned away, because at present there are no courses in the Provincial University in Toronto to meet their particular needs.

Establishment of graduate courses leading to a master's degree in forestry is therefore being strongly emphasized by the faculty, even in the face of other pressing needs.

Though the number and nature of such courses would depend upon the demand, it is felt that any forestry graduate should be given opportunity to specialize in any aspect of his profession.

Specialized training in forest tree diseases is badly needed at the present time, experts having to be imported to study the balsam heart rot, spruce bud worm and fungus diseases, which take terrific toll every year of Canadian forests and pulpwood-producing trees.

One of this year's applicants for a graduate course is making a special study of balsam, and another of spruce in relation to the reproduction and growth after logging operations and fires. Still another is studying the distribution and timber yield of the forests of a province in relation to climatic and soil conditions. These require special courses in methods of field research, silvics, forest ecology and forest geography.

Until nature's methods of making a forest are better understood, successful modification of a forest to meet the needs of man can never be attained. It is still not known how nature regenerates a pine forest after it has been burned, or a spruce forest after logging, and yet such knowledge is held to be fundamental. Only painstaking investigation can reveal it and for forest research of this kind graduate training is all-important.

An increasing number of the forestry graduates of the University of Toronto are entering the employment of lumber companies, and pulp and paper companies. Some of these have also asked for advanced courses in logging, engineering and wood chemistry.

Giving of graduate courses would of course necessitate an increase in the teaching staff, as the senior members are already overloaded with undergraduate instruction.

Mr. Preisch Visits Canadian West

M. E. Preisch, of the Haines Lumber Company, North Tonawanda, N.Y., and former president of the National Hardwood Lumber Dealers' Association, has returned recently from an extended business trip to British Columbia, where, in company with others, Mr. Preisch was looking into the pulp and paper possibilities of the Pacific Coast Province. It is understood that he is interested, along with several Canadians, in a new pulp and paper mill project which will be launched in the near future.

Oak Timber Lasts for Centuries

In driving a new gallery in a gold mine at Victoria, Australia, at a depth of 300 feet, pieces of oak timber were found perfectly preserved and with the appearance of having been sawed and shaped by man. The timber lies in an ancient river bed.

Just before the war it was discovered in Russia that the bed of the Moksha River, for a length of 400 miles, was full of magnificent oak trees. Oak has the peculiar property of lasting for centuries when buried in water or wet sand. Oak piles from bridges constructed by the Romans have been found to be as sound as when placed, nearly 2000 years ago.

Chatham is Having Inspection of Trees

Regarding the new system of tree inspection that was instituted at a recent council meeting in Chatham, Ont., Ald. Mindorff says that in accordance with the resolution passed at the council meeting, the tree committee is arranging to make a general inspection of all the trees in the city, for the purpose of marking and having cut all decayed or dangerous trees. It would be of great assistance to the committee and would expedite matters considerably if all citizens who have trees that should be removed, would communicate with the committee and leave their address.

This action is being taken as a preventative measure, as trees which are dead or decayed are dangerous to property and might cause considerable damage if blown over in a storm. The committee has two objects in view in cleaning up these trees, first, the elimination of danger to people and property, and second, the wood thus secured can be used as emergency fuel in case of an acute gas shortage during the cold weather.

Fort William Pulp Plant Progressing

The Fort William Paper Co., Fort William, are making good progress in construction work at Fort William. The main building of the pulp mill is practically finished. The machinery is starting to arrive and will be installed and in operation by the middle of March or early April. The company report that they can get all the labor, both skilled and unskilled, that they require, and there has been no delay in the matter of obtaining material. H. J. Wehman, assistant general manager, says that so far as pulpwood is concerned, they have been offered practically about five times as much as they will need in the first year's production. The company's wood for 1921 will be furnished by contractors but for cutting next winter the company intend having its own woods department.

Toronto Building Permits Show Increase

The City Architect of Toronto reports an increase in the amount of building for which permits were issued during 1920. During the year 7,400 permits were issued, representing a value of $25,785,000, as against 7,544, with a value of $19,819,000, for 1919. The increase in value is about $6,000,000, although the number of permits issued in 1919 was greater. For the month of December the value of the work for which permits were issued was $1,117,458.

Many Contracts Broken When Market Drops

Flimsy Pretext Used by Some Retailers to Avoid Living Up to Agreement or Accepting Lumber Shipments When Prices are Declining

When all is smooth sailing, skies clear and everything moving along agreeably, there are few cancellations by the retail lumberman. This is particularly true if the market is a rising one, and he needs stocks, the demand keen, building operations active and the turnover satisfactory. Such a condition continues for, perhaps, a year or more and then the number of requisitions suddenly falls off. The calls of consumers for hemlock, spruce and fir are limited. Some orders, perhaps, have been placed by the retailer which are not yet delivered by the millman or wholesaler and in the meantime prices have been dropping steadily. Many a man, who, under other circumstances, would never think of cancelling or raising objections on a flimsy pretext to accepting a carload, will easily discover numerous causes why he should not take the lumber. Ordinarily it would be reserved without question even if there were a few defects in classification, color or grading and especially so if the price at which the order was placed had gone up from $3.00 to $5.00 per M.

Let the state of affairs be reversed. After a carload order is placed and before it is delivered, if there has been a decline in quotations, it is then that every possible objection is raised. Many of these instances have come to light during the past few weeks, and some salesmen and wholesalers have spent more time during the present period of trade recession in adjusting difficulties and settling divers claims and kicks than have come their way during the last two or three years. It is only when an unfavorable situation arises and orders have been given a higher figure than the market, with its sudden changes in quotations commands, that the calibre and fibre of a customer can be properly appraised.

The Test of True Business Principles

Speaking along this line recently, a leading Ontario wholesaler said: "Many a retailer, who is affable, agreeable and whom you think is a fair, square sort of a fellow, appears to advantage as long as things are coming his way. He has bought opportunely on a rising market. He is proverbially pleasant and cannot praise your stock and delivery service too highly. Let there be a sudden alteration in conditions and a right-about-face state of things ushered in, and many little meannesses, frailities and nasty streaks in disposition and character that have never before revealed themselves, will be manifested. In other words, during the days of prosperity, these stigmas or deficiencies have been covered up by the veneer of courtesy, suavity and friendship. It takes a sudden jolt or sharp turn to scratch the polished exterior and disclose the real body material of which the man is made. It is then that he shows either his genuine worth, true principles and real manhood, or displays his blemishes, stains, checks and wane. It is the testing time, the crucial moment, and many are not able to stand the strain.

"I have observed," continued the speaker, "that the man who will do little, crooked acts and miniature underhand work, who seeks to obtain a petty advantage and to quibble about picayune affairs; in short, to play sharp on small things, to gain some doubtful advantages, who 'renages' on contracts and goes back on his word in both the spirit and letter of agreement, may seem to succeed for a while. In the end, however, I have never known him to win any permanent success or an enduring name for honesty and worth. Following closely the career of many of my customers, I have found that the fellow who plays square and does the right thing on any and every occasion, sometimes even when he could quite conscientiously escape, builds up for himself a name and a standing in the community, as well as a reputation for integrity and honor that is worth more to him than any monetary consideration.

No Use for Trickster or Quibbler

"Every man likes to be well thought of and well spoken of by his fellows. I could name you a number of retailers in western Ontario whose word is as good as their bond; who are not looking for flaws or loopholes in which to get out of contracts, claim rebates or be granted certain concessions. They stand up for their rights as all true men should, but they are not tricksters, quibblers, grouches or sharpers.

"I was talking to a traveller the other day when he said, 'You know that you run across a large number of fellows in any business who can always buy white pine or fir for less than the price you quote. A great many of these statements are mere concoctions or figments of the imagination, but there is one lumber merchant in F— who, if he told me that he had been offered 2x4's or 2x6's at a less figure than any on my list, I would believe him. He is one of the few men in my territory in whose word I would place implicit confidence.

'Another incident came under my notice not long ago when we sold a carload of lumber to a retailer in an adjoining town. It was No. 1 common and our figure was $50.00. Before the stock wa shipped and the car had reached its destination, the price had gone down to below $40.00. Now this business is conducted by a father and a son. The former is endeavoring to train the latter to take hold of the reins and run the yard successfully. No sooner had the car arrived than we got a phone message to the effect that the stock was not up to specifications and that there was a considerable quantity No. 2 common in the consignment. I told the young man when unloading the car to put aside the No. 2 so that we could get some idea of the relative amount contained in the 20,000 feet and we would make him a proper allowance. He said that he would.

'Much to my surprise, when I visited the yard a few days later, I found the whole carload had been piled in one lot and no attempt had been made to separate the alleged inferior grade. The retailer was not going to accept and wanted a very decided reduction claiming that he had paid too much for the stock. He raised many other objections, all of which was simply an effort to try and get the material for $10.00 or $12.00 less per M, by reason of the price having gone down that much. Finally I told him that we could sell the stock elsewhere if he would only load it back on the car. This he agreed to do. Things drifted along for several days and no attempt was made by the dealer to carry out his part of the understanding.

Do Not Want His Business Any More

"He finally wired us to send up our own men and load up the material. I then went up again to interview him and found him even more unreasonable. He would neither do one thing or the other. The whole attitude of the senior member was to work every dodge possible to try and get us to break the price so that it would be down to the present market quotation. He did not care how he did it so long as it was done, and we finally compromised at a figure, but we want no more of this retailer's trade. We know him thoroughly and lost money on this transaction. We have found out exactly the tactics of the man and are quite content to pass him over to someone else. If prices had gone up in the meantime there would not have been the slightest kick on his part about the small proportion of No. 2 common that was in the car, and he would have been howling for the shipment.'

"I notice in your paper that, according to the new order form, which will be presented at the next annual meeting of the Ontario Retail Lumber Dealers' Association, that in case a car of stock is not up to grade, it need not be accepted, and the inferior portion can be laid aside at the risk or hazard of the shipper. Then, if an agreement or settlement cannot be arrived at as to the deduction that should be made or the amount of rebate that should be allowed, the Arbitration Committee will step in and make an adjustment. This is a very fair stipulation all around. It affords a sound basis of bridging the chasm between the seller and purchaser and should eliminate much misunderstanding that has prevailed in the past.

Playing the Game in Proper Spirit

"The wholesaler or the retailer, who seeks to evade an honest issue and go back on contracts for no good and sufficient reason other than fluctuation in prices, is one that will bear watching. He can do more to stir up the pleasant and harmonious relations that should exist between producers, distributors and dealers than any other factor. At the beginning of the New Year I would like to see the Golden Rule prevail in all contracts, and each member of the industry play the game and do his part toward ushering in a higher and better basis of transacting business in the lumber arena."

Cedar Ties Used for More than 50 Years

About 2000 of the original white cedar ties laid in 1869 by the Chicago, Milwaukee and St. Paul Railroad, between North Milwaukee and Cedarburg, are still in use to-day. For untreated ties this is an excellent record.

For the first thirty-three years of service, or up to 1902, the ties were not even afforded the protection of tie plates.

Splendid Line for Lumber Merchants

Attractive Range of Combination Doors and Windows that Answer All-year-round Requirements

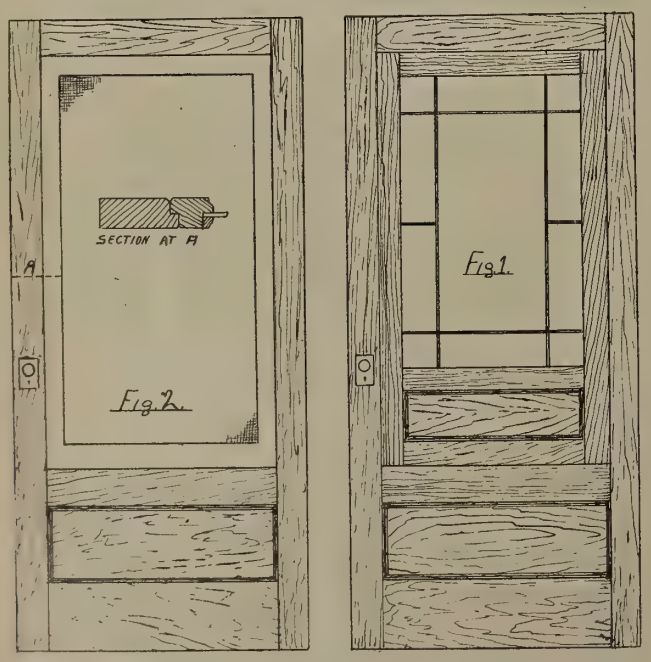
At this season of the year the thoughts of many home-owners are turning towards outside windows and storm-doors as a protection against the wintry blasts. Not only do well-made, snugly-fitting storm-doors and windows tend to make the home warmer and more comfortable but they also help to keep down the fuel bill and reduce the cost of heating the house. This reduction in heating cost will not only pay a handsome interest on the investment required for these doors and windows, but will return the entire amount, so invested, in a season or two.

In view of the fact that these doors and windows are used for a short period and then replaced by screens for summer service, a type of combination screen and storm door and window has been designed and placed on the market. The advantages of this type of door are such that they make a strong appeal to the average person and as a consequence are in strong demand.

Combination sash and doors are shown in the accompanying sketches. The same frame is used the year around and need never be taken off its hinges, the panel, only, being changed to suit the different seasons. As the frames and insert panels may be used in different combinations, a choice of a number of pleasing designs may be offered. Thus for the storm door, the frame might have only one panel, as shown in the cut, while the removable section might be made up with one, two or three panels or might be made with a variation in the size and arrangement of glass. In such an event, with a minimum of stock, the customer could be offered a considerable range of designs. The same applies to the combination screen and storm window.

Enumerating a few of the advantages should indicate just how strongly this type of door, or sash, should appeal to the practical man. One door frame with two insert panels, one glass and one screen, replace two doors. Only one set of hardware and one fitting is required. The labor of hanging the storm doors in the fall and the screen door in the spring, is eliminated. The change is made so readily and so quickly that there is no excuse for the house not being protected against flies in the early spring or against frosts in the early fall. As the doors or windows are well made, they should last as long as the house itself. Such an arrangement is convenient, economical and practical.

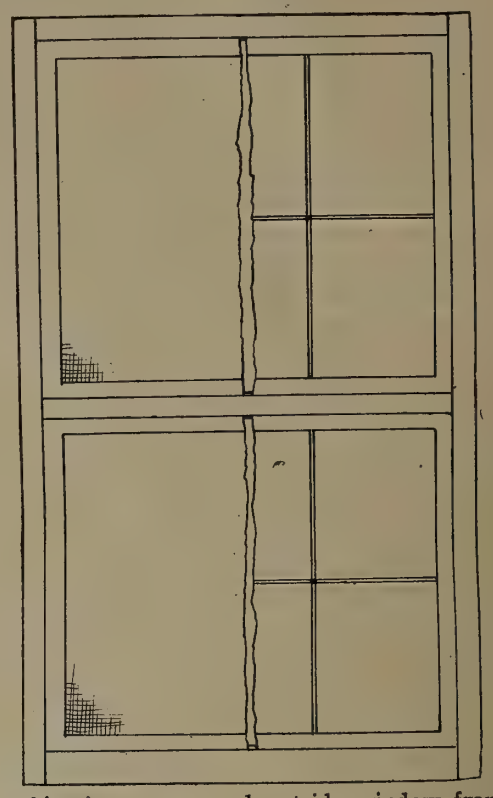
The inside of the opening in the frame is rabbetted to receive the insert or panel. This panel goes in flush, improving the appearance of the door. The panel may be held in place with either screws or buttons. Probably the best arrangement is an invisible steel button which is inserted in the edge of the frame and worked with a screw driver. Whatever method is employed it should be neat and inconspicuous so as not to detract from the appearance of the door and become an eyesore. The panels should fit snugly and be held in place in such a manner as to prevent rattling. In actual practice the storm panels for either window or door are sent out with or without glass as required.



Convertible all-season door for year round service

Windows of this type are usually hung from hinges at the top, with a convenient catch at the bottom. Thus in winter they may be swung open for ventilation. This eliminates the sliding pane or ventilator or the holes at the bottom so common to storm windows. In the case of the window, two panels are used and may readily be removed for cleaning—an added advantage.

Here is an opportunity for the wide-awake planing-mill or sash and door man to take up a new and popular line and make a few extra dollars as well as providing work for his plant. It may require a little aggressive salesmanship to put it across, but that is all in the day's work. The next time you are asked for a storm sash or door, talk combination and see what happens. The same applies next spring when you are asked for screens and screen doors. In making the screen sections, it would be advisable to use non-rusting wire whenever possible. While the first cost of such wire may be high, it is the cheapest in the long run.



Combination screen and outside window frame

Lower Prices Mean Greater Activity

In the very near future building costs will undergo a reduction of at least 20 per cent., stated John W. Frid, head of the Frid Construction Company, Hamilton, Ont.

Mr. Frid said no one would gainsay that the era of falling prices had come. Like every other branch of industry, the building trades were obliged to meet existing conditions. While no marked reductions in prices of this industry had been noted thus far, this was due largely to the fact that this season of the year is usually slack for builders.

"The outlook for next year is very promising, however," concluded Mr. Frid, "and while costs of building are bound to decline, I feel certain the trade in general shall be better off. Lower prices mean greater building activity."

Ford Takes Over Rich Timber Lands

Two deeds were filed recently in Detroit transferring lands of the Michigan Iron & Land Company to the Michigan Iron, Land & Lumber Company, a Michigan corporation formed by Henry Ford to take over this and other lands in the upper peninsula. The deeds cover lands in Iron county, one conveying the lands owned by fee simple and the other mineral rights only. There are 51,348 acres in the former and 13,926 in the latter deed. Attached to the first deed are revenue stamps to the value of $300, indicating a transfer value of $300,000. The second deed carries stamps to the value of $80.50, or a transfer value of $80,000. Included in the mineral lands are two under lease to the McKinney Steel Co. and the other is leased to the Oliver Steel Mining Co.

Lumber Company Changes Name

The name of the Palmer-Hunter Lumber Company, Boston, Mass., has been changed to the R. L. Palmer Lumber Company. The company, which have officers and distributing yards at Mystic Wharf, Charlestown (Boston), are wholesale dealers in southern and western hardwoods, and specialize in mahgoany. R. L. Palmer is the president and treasurer of the company.

Romantic Days Recalled in Lumbering Line

Interesting Anecdotes and Historical Record of Many Ventures in Stony and Rice Lake Districts—Picturesque Customs Which Prevailed in Pioneer Period

By F. H. Dobbin, Peterborough, Ont.

It may be of interest to look at a list of sawmills in operation in and about Peterborough, Ont., during the year 1858 as a starter. The number was added to considerably during the decade following. The quantities of lumber cut by these mills are in the main, (particularly in cases of those of smaller capacity) estimates, which were made at the time by the person who composed the list.

While the output from the individual plants may not seem large, (the want of capital precluding extensive equipment for operations in sight), they were cutting all the while, often both day and night. Consider the output for single days, raise that day by day for a season, (nearly nine months) and multiply this by years of twenty-five and you may gain some idea of how our forests were depleted. In addition there were mills at Eagle Lake, in Harvey township, at Buckhorn and at the head of Stony Lake. Add the square timber manufactured and exported and a grand total would be gained of astonishing proportions. Here is the list:

Nassau mills. Chas. Perry, were located two miles above Peterborough. In its time this plant was said to be the largest and most complete in the province. The mill had a standing challenge to cut against any mill in Upper Canada, which was unanswered. The capacity, as demonstrated, was 180,000 ft. in twenty-four hours.

Perry's mill. (E. Perry & Co.) was situated on the east side of the river at the point that was afterwards taken for the Peterborough waterworks dam. The average cutting was 60,000 ft. in twenty-four hours.

Snyder's mill was on the west side of the river above the dam and was similar in equipment to Perry's mill. The capacity was 65,000 ft. in twenty-four hours.

Blythe Sawmill. (George Hilliard) was on the west side of the river, using the dam now known as the Auburn dam. It had thirty-six saws and shingle machines, cutting 20,000 ft. per day of 12 hours. The original owner was James Bird. Afterwards the mill came into the hands of Mr. Hilliard.

Dickson's steam mill, on Little Lake, was equipped for lumber sawing and special sizes of marketable timber, joists, beams, etc. The capacity was 50,000 ft. per day.

Prime Boards for U. S. Market.

Dickson's mill, on the west side of the Otonabee River on Hall dam, carried Yankee gangs, etc. Its specialty was prime boards for the American market. The capacity was 50,000 ft. per day.

Dickson's mill, on the east side of the above dam, had an output of 28,000 ft. per day.

Dickson's custom mill, also on the east side of the river, turned out dimension timbers, joists, ship timbers, etc. 30,000 ft. per day was sawed.

Roger's mill was on the east side of the river, at Otonabee bridge. It was equipped with circular saws and confined its operations to logs of moderate size; capacity about 15,000 ft. per day.

McDougall & Ludgate mill was on the shore of Little Lake and steam-driven. It was destroyed by fire in 1868. This firm afterwards re-built at Harwood, on Rice Lake to take advantage of better shipping facilities, via Cobourg by rail and boats across Lake Ontario. The capacity was 55,000 ft. per day.

Boswell's mill was situated on the east side of the river, (opposite Inverlea Park, on the dam known afterwards as Martyn's dam). The mill had a capacity of 23,000 ft. per day.

Scott's mill. (W. A. Scott) cutting from limits about Chemong and Buckhorn lakes. It had steam power and a production of 300,000 ft. during the summer months.

Scott's mill was on Eagle Lake and was water and steam-driven, cutting from limits in Harvey township and the territory in Galway. This mill had capacity of over 4,000,000 ft. in the season.

Bobcaygeon mills, Mossom Boyd, drew their supply of logs from the shores of Pigeon and Sturgeon lakes, Big Island, the Burnt River district and limits to the north. The first mill had a capacity of 20,000 ft. per day. Afterwards the mill was rebuilt and enlarged and equipped to turn out as much as 110,000 ft. in twenty-four hours.

Shaw's mill, at Lakefield, when running at full capacity, cut 45,000 ft. per day.

Strickland's mill, at Lakefield, sawed from limits to the north of and surrounding Stony Lake and in the township of Dummer. The production would exceed 50,000 ft. per day. The plant made a specialty of dimension timber.

The First Automatic Shingle Machine.

Allandale mill, Thomas Short owner, was on the Indian River, near Keene, Ont., with steam power as a reserve and a capacity of 20,000 ft. per day. This mill introduced the first improved automatic machine for cutting shingles, capable of delivering from 40 to 60 shingles per minute. The steam engine in the mill was brought out from Glasgow, Scotland, and afterwards, being of the marine, or walking-beam type, was bought by Harry Calcutt and placed in the steamer "Golden Eye," to ply on the waters of the Otonabee River. In connection with this mill was a flour and oatmeal industry.

Kelly's mill, at Bridgenorth, on Chemong Lake, was operated by power and cut about 500,000 ft. during the summer season. This mill, or its successor, is still in service.

Hastings mill (Fowlds & Co.) used power from the falls at this point, which is at the end of Rice Lake. 14,000 ft. per day was cut.

In addition the following may be summarized: Nodwood mill (P. M. Grover), 4,000 ft. per day; Seawright's mill, on Round township of Belmont, 4,000 ft. per day; Breakenridge mill, also in Belmont, lot 18, con. 8, 5,000 ft.; Holcomb's mill, lot 12, con. W. Belmont, 2,000 ft.; Pearce's mill, lot 6, con. 9, 2,000 ft.; Holbrooke's mill, lot 4, con. 8, 3,000 ft., both in Belmont township; Grover's mill, about one mile from Norwood, served a local custom trade and cut 4,000 ft. daily.

Scattered about in the townships adjoining were many smaller mills, all contributing to the aggregate output. Among these were the Westwood mill turning out 4,000 ft.; Ewing's mill, on lot 4, con. 2, Asphodel, with 15,000 ft.; Pyne's, Ritchie's, Choate's, Buck's and Carveth's mills, all in Dummer township, with a combined capacity of 12,000 ft.; Ferrier & Sawer's mill in Douro, on Sawyer's Creek, with 5,000 ft. per day.

Along the borders of the adjoining countries to the east and west were a large number of sawmills. The same condition existed to the south, even down as far as the Lake Ontario shore. In the aggregate these consumed largely of logs. Many did a custom trade, cutting from logs drawn to the mills by farmers, the product being used for local purposes.

From the foregoing it can be realized how fast and how persistently the forest products of the territory were consumed and at what rate limits were depleted. At the date of writing lumber is cut at only a few places, and on the shores of the upper lakes and banks of the rivers.

The Splendid Timber From Asphodel.

The Township of Asphodel is one of the most easterly of the townships of the County of Peterborough. It borders on the Trent River for the distance of the southern boundary. Consequently for miles north of the river were found facilities for marketing square timber, the hauling being down hill, for the larger part of distances. This township is even to-day renowned for the extent and size of the, at one time, standing timber, now largely removed.

Robert Harrison, one of the earliest settlers in the township, has left a graphic description of the early conditions with which the first settlers grappled and among other relations tells of the timber and lumber operations as practised in the early days. He says:—

"In those days, being engaged in various branches of the timber trade the practice was to mulnette the square pine, load it, all that it would float, with pipe (barrel of hogshead) staves, (which were then in good demand for the West India trade) take all down the river and sell out at the Trent, and in these respects our efforts were aliost always crowned with success. This was in the years of 1830, when money was gaining a wider and better circulation.

"The timber easily obtainable in Asphodel was of great size and very much of it was of the finest quality. Let one or two instances suffice of the truth of th foregoing statement.

"Shortly after the erection of Walker's mill we were engaged in taking out saw logs on the high and sandy ridges to the west, known as Walker's mountain, when from a pine tree little more than three feet in diameter at the ground, we cut eleven, twelve-foot sawlogs. Th top end of the top log was fully a foot in diameter. This was in 1832. On another occasion we took out a mast from lot 10, concession 4, that measured one hundred and twenty feet in length, and had

a diameter of forty-two inches at what was known as the "first partner," which, in that instance, would be the distance of forty feet from the "grub," one-third of the entire length.

Danced Jigs on the Square Timber.

"The largest piece of square timber ever taken out in Asphodel was cut on the west half of lot 12, concession 3, by the men employed by Foley and Grover, of Norwood. The stump of the tree, where cut, was seven feet six inches in diameter, and the piece contained by measurement nine hundred and sixty cubic feet of timber. Every man in the shanty, cook included, got on the piece and danced jigs, reels and hornpipes on its surface to the music of the fiddle, for the two miles of distance between the shanty and landing place at the forks of the Ouse river, or stream.

"The hauling and landing of masts, while at times very laborious, work on the men and horses, had withall a spice of real danger to the limbs and lives of both sufficiently great to make the work of the mast gang lively and dashing. To command twenty-two span of spirited, active and powerful horses, hitched to the "bridled" mast sleigh, and to prevent the liability, while crossing steep ridges, of being "jacked," as the mast broke over the hill crests and rushed headlong towards the valley beneath, was exciting. With teamsters mounted and every horse of the forty-four galloping for life at full speed, usually on a crooked road, was not unusual. Frequently leaping the "lead chain" sideways to avoid being caught and thrown, is by no means the office of a sinecure, and has furnished numberless experiences in the life of the narrator not easily either imagined or described. This much for the road, now for the landing.

Pulling Monster Mast Out on the Ice

"Delaney's was a splendid landing, on the Trent, about two miles below Hastings. A long but not too steep slope formed the north bank of the river Trent, at this place. Winter was very rapidly becoming a thing of the past on the occasion in question, the ground being laid bare of the fast melting snow. The last monster pine was yet lying prone in the mast road at the foot of a ridge where at one o'clock in the morning the sleigh "Bridle" had given way and the sleigh was "jacked." Every horse and every man available was at daylight called into action. Tacklings were all made ready, the mast rolled over, and the jack-sleigh turned right side up and right end forward. Soon the giant was loaded and slowly moving, for forty-four trusty men were forced to test sinew and muscle to the utmost. From the top of the hill, down the declivity, the mast was pulled by the horses at full gallop, right out on the ice. When the leading teams had nearly reached the south bank of the river the ice broke under the strain, and ten teams and riders were plunged into the river. Fortunately all were presently rescued."

Boyd of Bobcaygeon Was Great Name.

For many years the name of Mossom Boyd was one that the lumber interests used to conjure with. What the Boyds would do had to be considered at any possible contingency. The business was so well established, and magnificently equipped, and the limits so ample that only the lack of extensive means of transportation prevented a much larger development. Practically now out of the reckoning, the mills dismantled, the limits handed over to those who cull, from the denuded forests, railroad ties and trees of almost attenuated size, a phase in the rise and progress of the community of Bobcaygeon is finished.

Mossom Boyd, Sr., the original owner and an English gentleman, coming out to Canada, fell, as it were by accident, into the lumber business. He settled at first in Fenelon Falls, which place attracted him from the prospect of rural life and one congenial. Finding it irksome, without some active interest he bought a small mill at Bobcaygeon from one Thomas Neads. Standing under shelter, preserved as a matter of sentiment, are the old wheels that drove the machinery of that small mill.

His first venture was in 1840. It was not much trouble to acquire limits. These were secured adjacent to waters and convenient for handling the cut from the forest. Logs were secured from the district around Pigeon Lake. Very large quantities, in fact the bulk of the product of the mills, came from Big Island, on the upper waters of Pigeon Lake, and only a short distance from Bobcaygeon. Limits along the Burnt River, reached up into Haliburton County, (as the district was afterward named, after Judge Haliburton of "Sam Slick" fame). The cut from this territory came by way of Cameron Lake, down the rapids at Fenelon Falls, through the stretches of Sturgeon Lake to Bobcaygeon. It is doubted if any manufacturing opportunity has been so favorably situated in point of delivery of raw material. Again, the fall of the rapids at Bobcaygeon, where the mills were situated, while not very high, had the advantage that there was any amount of water, easily controlled.

One of First Mills Using Band Saw.

In due course new and large mills were erected. These held almost every appliance that would make for extended output. The equipment was lavish and results came right along. Among other things it held three wide banks, gang saws, with appliances for slabbing, trimming and preparing timber. Six upright wheels were provided to power the circular saws in use. This mill was one of the first to introduce the band saw, once its merits became apparent.

Lumber was transported to Lindsay by means of a fleet of tugs and equipment of barges. From the piling ground to the wharf was a short distance by tramway, and the water haul to the flat cars at Lindsay and up the river Scugog about 27 miles. The G. T. R. supplied almost unlimited facilities in the way of freightage. Among other interests the Boyd business built and equipped several steamers that did a freight and passenger business on the lakes connecting with the waters about Bobcaygeon. In fact, before the Victorian Railway, (now a branch of the G. T. R.) was built to Fenelon Falls and on the Haliburton, and the C. P. R. line opened to Bobcaygeon, all the package freight inwards was handled by the Boyd boats.

Sons Succeeded to the Business.

On the death of Mossom Boyd the business was taken up by two sons, Mossom M. Boyd and William Boyd, and associated with them was John McDonald, (brother-in-law), and so activities were carried on until 1907. Five years were required in cleaning up the cut available from the Burnt River limits and the left-overs from Big Island. It was on this island that the herd of buffaloes, brought in from the West, were kept and with which some interesting experiments were made in the way of crossing cattle with the idea of developing a new strain that would carry the sturdiness of the buffalo with the fineness of the domestic breeds.

It may be added, as an evidence of capacity, that the Bobcaygeon mill had cut over 100,000 feet of export lumber in twelve hours, in addition to lath, shingles, etc.

Pioneer Lumberman of Peterboro County.

Of the pioneer manufacturers of sawn lumber and timber that began, rose to prominence of provincial consequence and who operated in the district in and adjacent to Peterborough three or four are worthy of mention. In conducting the several businesses, each along lines that converged, followed a policy of gradual expansion as markets developed. For thirty years, and long afterward the culler, passing the logs along the boom and, sorting with keen appreciation or careless inspection paid respectful attention to the logs hammer-marked "S. D.", the escutcheon of Samuel Dickson, the founder of the large industry that he left when accident called him away.

A native of County Cavan, Ireland, he came to Canada at the age of 21 years, reaching Peterborough in 1830. He worked for a time with John Hull, a distiller at Port Hope, and began in a modest way cutting lumber in 1840, buying a small mill that had been put up on the east side of the river on the old Hall dam. He bought on a rental-owned basis and presently acquired the property. He progressed so far that by the beginning of the fifties he was enabled to build a larger mill on the west side of the river and on the same dam, which came into his hands.

This mill he afterwards exchanged for the very much larger steam driven mill on the shore of the Little Lake, at Peterborough, which had been erected by McDougall & Ludgate. At the west side of the dam he had put a customs mill and this he retained, adding to it a plant to manufacture lath and shingles.

In full operation these mills consumed large numbers of logs. At one time the business carried on operations, cutting and getting out logs and timber from the townships of Cavendish,, Anstruther and part of Harvey, in all about 105 square miles of limits. These were unusually productive. His choppers had orders not to look at anything that measured under thirty to htirty-six inches in girth. There are as yet standing in these limits stumps of trees long ago felled that measure across the face of the cut from forty to sixty inches, silent testimony to a growth of giants. These were virgin limits and never attacked by the axe of the chopper.

How Mr. Dickson Lost His Life.

Finding the responsibilities of business heavy, Mr. Dickson's son-in-law, T. G. Hazlitt, came into the business and practically managed it. This was in 1860. During the time of flood and high water in 1870, Mr. Dickson lost his life while endeavoring to protect a part of the power dam after the eastern end had been swept away. The snow fall of the winter had been excessive, beyond the memory of man, and a rapid melting in the spring brought a flow of water that made the Otonabee River a raging torrent for the ten miles between Lakefield and Peterborough. Many power dams were wrecked.

Following Mr. Hazlitt's death, in 1899, the business which had been merged in the firm title of the Dickson Co. began to withdraw from the field of active operations, though it had previously acquired the W. A. Scott limits near Minden and Haliburton, in Victoria County. In 1885 Mr. J. C. Shook, (now deceased) took over the management of the company and carried on operations at Lakefield and Peterborough. In 1905 the combined cut of these mills reached

17,000,000 ft. of lumber and in addition 15,000,000 ft. of timber. In 1906 the business was disposed of for $600,000.00. At that time it was one of the oldest and certainly the largest in the province. An interest was retained in the Lakefield mill and a newly erected steam mill on Burnham's Point at Peterborough. From the Lakefield mill was taken a cut of 80,000 ft. per day and fro mthe Peterborough mill 30,000 ft. in the same time. Under the name of the Peterborough Lumber Co. operations in a limited way are still carried on. The disposal of the properties included the sale of the rights in the dam at Peterborough and lands adjacent to the American Cereal Co., now merged in the well-known Quaker Oats Company, operating in Ontario and Saskatchewan.

Ramifications of the Rathbun Co.

It is a long call back to 1845, when the beginnings of what was in later years the Rathbun Company, began operations. Commenced and carried on under the wise and energetic control of W. E. Rathbun, Sr., the business extended and developed to become one of the largest operating in the Midland District, including the territory extending to the north. The business was located at Deseronto, Ont., on the Bay of Quinte, an arm of the waters of Lake Ontario. Here were built mills that, in after years, were extended and enlarged to an extent that afforded facilities for an enormous cut of merchantable lumber. In addition the company added features of a general produce business, having large interests in regard to supply for their own forces in the timber and forest field.

Early operations were set out in the county of Hastings, the supply of logs being cut along the waters of the Moira River and floated to Deseronto. At times the company found it judicious to establish, either by purchase or by building, mills at several points especially as connected with operations in the county of Peterborough and extending into Victoria county, the upper parts of the county being really more accessible on account of the waters, subsidiary to the Balsam Lake, and draining into Haliburton county southward. For many years a mill of considerable capacity was run at Lindsay. Connections were made for manufacturing at Peterborough. At Campbellford, on the Trent River, the company had a mill of considerable importance.

Difficulties in Getting Timber.

It is of interest in connection with this company's operations to recall the difficulties of gaining stock and bringing it to a point of manufacture. It often came about, that logs cut on the limits north of, say, Coboconk, and collected on the upper waters of the Gull River, above and below Minden, required nearly two years, or seasons, to reach destination at Deseronto. Logs were collected from cuttings along the shores of Big and Little Bob Lakes, Mountain Lake, (in Haliburton county), Gull Lake, and the stretch of river to Big and Little Mud Turtle Lakes, and so on to Coboconk. The drives numbered many thousands of pieces. It was the day of the horse capstan when the crossing of Balsam Lake had to be made, through Cameron, Sturgeon and Buckhorn lakes, past Bobcaygeon and Pigeon Lake, the stretch of the tonabee River to Burleigh Falls, and Stoney and Clear Lakes and river to Lakefield. Ten miles of exceedingly rapid freighting to Peterborough and twenty miles of easy floating, with another stretch of twenty miles, the length of Rice Lake, with prayers for a favorable wind and delays if not auspicious, brought the drives to Hastings, the beginning of the River Trent.

Driving Logs Over 200 Miles.

Low sinking logs were culled out and sawn at Campbellford, and the drives sent on through to Trenton, boomed up and towed to Deseronton. From the point where the logs were put into the stream or river the trip to Deseronto was fully two hundred and thirty-nine miles. To-day, drives of from thirty to fifty miles are considered rather formidable. Elm, ash and birch logs were cut at Lindsay, two summers of soakage being rather a hazardous contingency to be avoided. Large shipments of manufactured stuff were despatched to the American trade by way of Oswego, to go forward by rail to Albany, or by using the Erie Canal.

Each Unit Must Play Its Part in Lumber Game

The Wholesaler is Common Channel Through Which the Retailer Has His Various Wants Filled, and the Manufacturer is Able to Market His Product

By "One Who Knows"

In recent issues of the "Canada Lumberman" there have been articles expressing somewhat bigoted statements regarding the service, sphere, place and function of the wholesale lumberman. I wish to point out not only the errors but also to show where the retail dealer would be the sufferer were we, as wholesalers, to be eliminated from the pursuit of our business.

The wholesaler, no matter what his line may be, will always be with us, and if people would but give scant thought to such matters, then we would have no need to justify our position.

From the eardliest experiences of men in commercial life there have been those who directed their energies along lines practised by the wholesaler. As a common channel we enable the retailer to obtain his varied wants and the manufacturer to market his products.

Would this be possible without the wholesaler? It would not and no one has so far been successful in his endeavors to eliminate the common ground whereon the source of supply can reach its immediate outlet. When would the smaller manufacturer obtain the additional capital so often needed to enable him to procure men and supplies whereby to produce his lumber. This also would frequently apply to manufacturers on a larger scale who are enabled by the sale of their cut in advance to bring out larger quantities than they could by employing only the capital available through the channels of financial institutions.

Enabled to Carry Larger Stocks

Then too, the retailer is enabled to carry larger stocks through his ability to obtain extensive credit from the various wholesalers with whom he deals. This often permits him not only to take advantage of existing market conditions, thereby bettering his own position, but also to carry stocks adequate to cope with needs greater than his competitor can supply. Yet the wholesaler does not derive all the benefit from the position which he occupies, but by reason of it he is enabled to give aid to both the manufacturer and retailer where it is often most needed.

As a clearing house permits the banker to transmit business to countries many miles away, we enable a retailer to fill his wants in as direct a line as possible from the source of supply.

Knowing the retailers, we are enabled to get for them lumber from manufacurers who would not under ordinary circumstances entertain their orders. In performing this service we act as a letter of credit which paves the way for easier methods of merchandising.

Yet knowing these features, there are those who would have us eliminated and have the lumber sold direct to the retailer. Why not have it pass direct from government controlled depots to the consumer. It is just as feasible as the plan suggested and would cut out one more profit which is, perhaps, the largest obtained by any in point of percentage.

Upholding the Salesman in His Work

Having shown in a brief way why we are, and what our chief reason for existing is, may we be permitted to point out that a few of the utterances of a certain gentleman appearing recently in your columns are as far short of the mark as is possible. Ask some of your wholesale friends how often the orders are cancelled in order to obtain an increase in selling price. They will tell you that more frequently than not the orders are filled at a lesser margin of profit than there should be in order that the salesman may be backed to the limit and his pathway be made brighter and easier.

Again, can a retailer get too chummy with the wholesaler? Not if both are right-thinking business men. The majority of those who sell you the stocks for your yards are at any time ready and willing to advise of any sudden change in market conditions, and very few are out to reap a harvest at the expense of forcing the retailer's hand too quickly. It is often too great a leniency which eventually turns the tables and leaves the wholesaler in the position of having been the victim of too great a confidence being placed in persons totally unworthy to receive such confidences. Too often the isolated case is allowed to predominate and, while we are ready to admit that there are some quick to take advantage of any opening which might present itself, there are many more, who are doing their utmost to return with good dividends the confidence reposed in them by the retailer. Often a little more leaning towards the wholesaler would prove as beneficial as that which is given the banks, for it is not money alone which enables a man to purchase his stocks. You know this to be true or else there are many sales which you would not make to your own customers.

Very few wholesalers are in a position to manage your retail

business as you would, and the same applies with equality to the retailer who would turn wholesaler. We each have our place to fill and problems to solve and through a harmony existing, based upon a mutual understanding of each other's limitations, we can continue to enjoy to a great extent such prosperity as is meted out to us. Each has his allotted niche, yet the one without the other would never achieve as satisfactory results as are possible at present.

We do not need the elimination of the one hoping to better the position of the other thereby, but a closer bond of business relationship which will enable us to help the other fellow along over his rough spots and smooth out the small differences which are certain to arise from time to time.

That little prayer of Burns—"Oh would the Giftie Gie Us to See Oursels as Ithers See Us,"—will, if practised more often enable us to get the vision which is apparent to the other man, and we would refrain from any hopes of having the best friend of the retailer entirely turned out of the vast family of lumbermen.

We do not require to apologize for our existence nor account for the shortcomings of others, but we do feel that the time is not yet ripe for the application of the ideas so recently advanced which would require our seeking new lines of endeavor or brand us as wolves in sheep's clothing seeking whom we may outwit.

Former Premier is Now Lumberjack

Oscar Tokia, who was Premier of Finland in 1917, during Kerensky's administration in Russia, is now at North Timiskaming and may settle there with 38 of his countrymen, all of whom were serving in the British army at Murmansk. There were more than 1,000 Finnish Red Guard soldiers, who, after civil war ended in Finland, joined the British army in Murmansk. M. Tokio was serving with the Murmansk Legion as a colonel under the Canadian Commander, Colonel Burton, who was chief of the Finnish Legioneers and who returned to Toronto last summer.

Tokio held many high positions in his country in former years. During 1917 he was Premier and President of the Finnish Republic, which at that time gained its independence. Formerly he was President of the Finnish Parliament and member of the Cabinet. He was also at one time President of the Finnish Trades Unions' central organization. Tokio has been a noted leader of the Social Democratic party.

After the withdrawal of the British forces of occupation from Murmansk all the other Murmansk Legioneers, excepting about 40, were allowed to return to Finland. These 40 Legioneers were accused of taking part in the civil war and of high treason against the State. According to the agreement with the Finnish Government the British Government brought those facing serious trial in Finland to England and thence to Canada.

Among the Finnish Legioneers there still remains an English officer who is married to a Finnish woman.

The Finnish Legioneers now enjoy full freedom and are working at the lumbering industry and may settle at North Timiskaming.

London People are Most Cheerful

A description of an extended tour of European countries was given recently at the Rotary Club, Montreal, by Mr. T. J. Stevenson, Sales-Manager of the Riordon Pulp and Paper Company, Montreal.

Mr. Stevenson dealt first with the British Isles, with particular reference to London, Edinburgh and Ireland. He arrived at Liverpool last June, the first impression of the Old Country being the small size of the railway equipment, the immediate unfavorable opinion to give place to praise when he experienced the combination of speed and comfort. The people of London, said Mr. Stevenson, were, in spite of the disadvantageous effects of the war and the inconvenience arising therefrom, the most cheerful in Europe. Their spirit was superior because they declined to take their difficulties too seriously, and at the same time utilized all means to better their conditions, socially and commercially. During his visit to the metropolis, Mr. Stevenson said that he had been shown every courtesy by the Canadian High Commissioner and other Canadian officials, including Sir George McLaren Brown, of the C. P. R., London.

More Than Million Houses Needed

Estimates placing the shortage of houses in the United States at more than 1,250,000 will be placed before the National Council of the Chamber of Commerce of the United States at a meeting to be held in Washington January 27 and 28, which will discuss measures to relieve the situation.

The housing shortage, according to John Ihlder, Manager of the National Chamber Civil Development Department, has reached a point where 4,000,000 persons are inadequately housed.

"For a number of years prior to the World War," said Mr. Ihlder, "it is conservatively estimated that there were erected in the United States between 350,000 and 400,000 family dwellings in a year. This includes homes and apartments.

"In 1919 it is estimated that there were built only about 70,000 houses in the United States, while the number erected during 1920 will probably turn out to have been even a smaller number than that figure."

Movement to Save Famous Green Timber

The movement to save the famous Green Timber on the Pacific Highway, B.C. instead of being checked by the announcement that it will cost $350,000 to buy off the present owners, took fresh impetus at a meeting of the Board of Trade, New Westminister, B.C., when it was decided to have the tract cruised to determine just what timber there is in it, and also to seek the aid of what may prove a powerful ally, the Canadian Forestry Association.

Mr. N. F. Kendall, member of the Surrey Board of Trade, urged that as a scenic asset to the Province of British Columbia it is well worth the $350,000 that the King-Farris Lumber Company demands. Reeve Sullivan expressed the opinion that estimates of the actual quantity of timber in the tract are too high. As for the cost, he suggested that the province has plenty if other timber and that it would not mean an actual expenditure but would simply be taking money out of one pocket and putting it into another.

It was Mr. G. O. Buchanan who made the suggestion that the Canadian Forestry Association be asked to help. One of its objects, he said, is to preserve just such stands of timber in order that visitors and future generations of Canadians may see what Canadian timber once looked like. With the exception of one on Vancouver Island, the Green Timber is the only stand of real logging timber on a main road in British Columbia.

What Canada's Forests Mean Industrially

Some Economic Features Outlined, Showing Necessity of Canadians Waking Up to Pressing Problems of Conservation and Scientific Forestry

By R. O. Sweezey*

There are a few important economic features affecting the forest resources of Canada, the full significance of which is not apparent to the casual observer. He realizes, of course, that forests are being depleted faster than they are growing, that wanton destruction still prevails, and that the forces of defence seem quite inadequate. This problem is forcing itself upon the attention of all thinking men—but the remedy or preventative for the impending catastrophe to such an important section of our natural resources remains more or less obscure, and lacking in definite form—at least to the extent to which the average citizen can grasp its meaning.

The question which a forester is most frequently asked to-day is "what is being done to perpetuate the forest?" Unfortunately those most familiar with the facts have little comfort to offer in their replies. True, much has been done during the past ten years to offset destruction, by developing co-operative fire-fighting organizations in the Province of Quebec. The Government of this province and the New Brunswick Government are struggling towards better forest management. Laws have been made and enforced to control settlers' fires — at one time the greatest agent of destruction. The large pulp and paper companies have technical foresters with their programs of re-forestation—but these are only first steps on a very long journey. The Government laws are yet crude and their application in some cases still more crude. Re-forestation ideas, though laudable, have been too long arrested by the fascinating passtime of nursery stock production, whilst the broader problems of studying natures' methods toward forest perpetuation have been neglected.

After some fifteen years of travelling throughout the forests of Quebec and Ontario, the writer finds from his observations that fully 75% of the present forested area has been burnt over in the past two hundred years. That these burnt areas have grown up to the present good timber stand is an indication that nature has methods of its own for perpetuating the forest.

Hardwoods Gaining Supremacy in Forest

To study these methods and foster them should be the first duty of the technical forester of this country. He has new and perplexing problems, also, in considering the reforestation of cut-over area where by a process of selection and cutting of the more valuable soft woods the inferior types remain to dominate the forest to the detriment and ultimate destruction of the economically more valuable species. Thus the selection and cutting to-day of the softwoods in the mixed type (which is the type that covers the greater part of our eastern forest areas) leaves the hardwoods with their spreading crowns to choke out any tendency for the natural re-growth of the spruce, balsam and pine—a process that promotes the survival of the unfit. To remove and find an economic use for these hardwoods is therefore a serious problem. They have the same problem in the United States. To-day hardwoods predominate practically everywhere in their forests of the east.

The Pulp and Paper Industry

The pulp and paper industry of the United States is consequently faced with a very serious problem that threatens its destruction. Even had they been aware of this menace at the birth of the industry, it is unlikely that they could have provided ample remedies, considering the rapid expansion, and the fact that it is only about 25 or 30 years ago that spruce and balsam first became valuable as raw material in the making of newsprint paper. As it takes four to nine years, depending on soil and climate, for a spruce tree to grow one inch in diameter, it is obvious that at best an average of fifteen years old stand would offer small consolation as an immediate offset to the present menace.

The newsprint production of the United States in 1919 amounted to 1,375,000 tons. This is only one of the several grades of paper produced, and in this the spruce and balsam pulpwood used was 2,000,000 cords, of which 1,000,000 cords was imported from Canada.

Authorities in the United States assert that in ten to fifteen years the newsprint mills will have no pulpwood left in their country east of the Rocky Mountains. Long before that time they state that many existing mills will run out of wood. It is likely, however, that one or two of the larger newsprint manufacturers in the States will continue after fifteen years to have sufficient wood for a part of their present production, but meanwhile their efforts will probably be directed towards building new mills in Canada, as their production diminishes at home. Unlike lumber mills, hence the seriousness of their position, which by reason of the scrapping of one plant and the building of a new one in Canada involves enormous expenditures—the effect of which will be to maintain paper prices at a high level.

With such an example as the forest destruction in the United States, it is well to consider the menace to the coniferous forests of Canada, and it is obvious that the menace becomes more serious with the prospects of invasion by a wood-using industry that must move from its own country in search of raw material. With a few prominent exceptions, however, it is unlikely that there will be an actual movement of paper manufacturers from the United States into Canada, but so far as the forests are concerned, the same effect will be produced by existing Canadian manufacturers enlarging their outputs.

The Vision of Big Interests

That Canadian manufacturers have not been lacking in vision is evidenced by the amalgamating and enlarging processes they have been going through, whereby several of them have acquired control of forest areas that will enable them to expand and take up all the newsprint and pulp business that American manufacturers are forced to relinquish.

For the protection of the Canadian forests, their perpetuation and scientific operation, the magnitude of some of the existing corporations augurs well. It has been frequently said that growing trees is too costing an operation and too slow for an individual or a small company to practice. Critics urge governments to do it. But, for the sake of efficiency it were wise that governments confine themselves more closely to the functions of governing the country and regulating the development of its natural resources. It is gratifying that these natural resources, including forests and water powers, are mostly retained in the name of the people. Let those who have leased them show their good faith by sane methods of operation, conservation and utilization. The lessees of the forests, in order to save them from destruction must practice scientific forestry.

Practice of Scientific Forestry

To operate scientifically will require vast expenditures that cannot be undertaken by the individual or the small corporation. Is it not good for the country, therefore, that large and financially powerful corporations should be shaping toward future developments on a magnitude commensurate with the problems to be faced, in saving the forests from destruction? Have not the people ample protection against undue exploitation in the retention of the forest areas in their own name, whilst the corporations operate them under a lease that is practically perpetual, subject to obeying the laws.

In considering the forest stands of the country only the soft woods, such as spruce, balsam and pine, need be considered for the purposes of this discussion. To a small degree hemlock and cedar enter in. These are the species that give economic value to the forests. Hardwoods, of course, have their value, but to a very limited extent, compared with the softwoods. As a protection to watersheds in retaining moisture or retarding the melting of snow in springtime, the hardwoods are very inefficient agents, compared with the conifers. Rivers whose drainage basins are covered with hardwoods instead of conifers offer difficulties in power developments, due to the wide range between maximum and minimum flow. There are several examples of such rivers in Canada and the United States. Except for the southern portions of Quebec and Ontario, the watersheds are clad mostly in conifers, either in "mixed" or entire softwood stands.

Quebec, which contains more pulpwood than any of the provinces, has forests which, if we include both the accessible and inaccessible, might measure up to two hundred and fifty or three hundred million of cords (spruce and balsam). By adhering to cutting regulations as to sizes and including only the economical accessible wood, the quantity might measure one hundred and fifty millions of cords. By the same standard of measurement Ontario would probably show one hundred million cords; New Brunswick thirty million cords; Manitoba twenty-five million cords, and British Columbia one hundred and twenty-five million cords, including hemlock. These give a total of four hundred and thirty million cords of spruce, balsam and hemlock.

The present annual consumption of pulpwood manufactured into

*Paper read before Montreal Branch of Engineering Institute of Canada.

pulp and paper or exported, amounts to three and a quarter million cords. In addition there is the equivalent of over four and a quarter million cords, spruce, balsam and hemlock, being cut into lumber. The total of seven and one-half million cords divided into the estimated stand of four hundred and thirty million cords, would indicate that the species suitable for pulp and paper can last fifty-seven years. With the annual cut amounting to ten million cords, a figure that it may reach before long, there would be enough spruce, balsam and hemlock to last 43 years. This, without making allowance for destruction by fire, which despite precaution is bound to account for a large annual consumption.

The Greatest Enemy of the Forest

And right here it may be interesting to observe that the greatest fire fiends in the country are the Canadian Government Railroads. Now that the Transcontinental, Grand Trunk and Canadian Northern systems come under this management we may look for still greater destruction. The Canadian Pacific Railway and other private railroads come under the forest fire regulations of the Railway Commission, which results in efficient protection, but the Government Railways do not come under the rules of the Railway Commission, and are permitted to add wanton destruction to their already deplorable record as railroad operators. It is quite common to see Government Railway employees setting fire to piles of old ties in the driest weather, with the result that millions of feet of the most accessible standing timber burn up in a few hours. What the section men fail to burn, the locomotives generally get. One authentic case shows where a Government locomotive set forty-six fires in one day in the St. Maurice region. Here we have then one department of the Government struggling to prevent fires, and protect the forest, whilst another department is burning it down blissfully unconcerned as to the consequences.

With so many enemies seeking to wipe out the forests, it is not surprising that United States authorities are evincing the greatest alarm. Canadians who know something of their own forests and have followed the American debacle are therefore justified in their weirdest howls of calamity.

At the present time the investment in Canadian Pulp and Paper Mills amounts to two hundred and sixty-five millions of dollars, besides about one hundred and sixty millions, invested in the lumber industry. The annual production of the former amounts to,

800,000 tons of newsprint paper
400,000 tons of high-grade sudphite pulp and
210,000 tons of groundwood pulp.

The industry is undoubtedly destined to grow to a very much larger output, thus creating a further drain upon the forests.

No Companies Operating Scientifically

Shall the problem of the forest be faced with determination, or shall the policy continue to be one of evasiveness? To-day some of the largest corporations, though sincere in their desire to effect methods of conservative logging and scientific forest management, are under such loose and inefficient practice that even their cost systems fail to reveal the frightful losses. None of the companies are operating their forests under scientific practice, and at the present rate of approach it may be years before the first one reaches such a state.

Mr. Sweezey also dealt with the question of scientific forestry in relation to logging, emphasizing the point that those, who were in charge of operations, often did not see eye to eye with the foresters in the matter of improving methods. Until recently little attention had been paid to scientific forestry, because the companies were not in a financial position to spend the necessary capital.

The paper was illustrated by a number of slides showing reforestation.

In a brief discussion which followed, Mr. F. W. Cowie, Engineer for the Montreal Harbour Commissioners, suggested that, with a view to stop the depletion of our forests, the Government should enact legislation, which should compel the planting of a tree for each tree cut down.

Mr. Sweezey advocated a plan by which the mature trees would be cut, and the growth of the young trees encouraged. Our forest laws were by no means perfect. The pulp and paper companies were spending large sums on the purely technical side, but were not devoting much attention to the improvement of logging methods.

Buying Always at Best on an Upward Trend

Current Tendencies in Industrial and Financial World are Encouraging, Not Only from Present Outlook but for Promise of Good Year During 1921

To insure a busy year in 1921 and to make possible the progress of needed housing and public works construction definite action on price revision seems necessary. Only stable prices will encourage building. Buying is always at a minimum when prices are on a decline and at its best on the upward trend, says O. M. Fox, in the "Engineering Record."

There is a lack of confidence in the stability of present-day costs, or, stated differently, a conviction that construction cost will soon be much lower. No industrial company cares to put a million dollars in the erection of a plant which six months hence may possibly be built for $600,000. No financial institution can risk financing such a project. No public official dares spend public moneys except for urgent work under such conditions.

The necessity of stabilizing costs, not only in fact but also in the public mind, is therefore apparent. Labor has already taken long strides in this direction. In Chicago, for instance, the building trades have agreed that there shall be no wage or working-condition agitation for eighteen months. At no time in recent years have there been so few strikes and lockouts and it has been a long time since labor has been so plentiful. Efficiency, by common agreement, ranks from 12½ to 30 per cent. higher than during the silk-shirt days, but labor is almost the only construction element that shows cost decline.

Reductions in building materials prices during the past ten weeks have been remarkably few in comparison with those of other commodities.

Much has been made over a drop of from 30 to 40 per cent. in lumber costs, but lumber cost, after all, is such a small portion of the whole expense of general construction that the influence of this movement is almost negligible. The general public from whom, in the last analysis, all buying movements come, whether of cotton cloth or concrete warehouses, seems intiutively aware of the facts indicated by the weighted index figure of prices issued by the Bureau of Labor Statistics at Washington. This shows a decline of about 53 points, or 23 per cent. since May 1, but shows also that during this time building materials in the aggregate have shown but 8 per cent. decline.

People recall that while building material prices have been receding 8 per cent. textiles have gone back 35 per cent.; farm products, 30 per cent.; metal products, 29 per cent., and that all commodities, including building material, have dropped the 23 per cent. mentioned in the foregoing paragraph. They recall that the 8 per cent. decline in building materials has been confined almost exclusively to lumber and sheet and structural steel, and are asking why brick, cement, sand, gravel, lime, reinforcing metal, etc., do not do their share.

Would-be investors cannot help but note that in most lines in which but slight reductions have occurred the reason is offered that the price increases were less than the average during the period from 1913 to May, 1920. Such is not true of building material. Again citing the Bureau of Labor Statistics, we find that farm products advanced during that period 146 per cent.; foodstuffs, 187 per cent.; metal products, 157 per cent.; chemicals, 152 per cent., and that building materials advanced 241 per cent., being exceeded only by textiles, 256 per cent., and house furnishings, 271 per cent.

The above recital is given to point out the frame of mind of the public, and to indicate the necessary steps that must be taken to change that attitude, which is apparently so determined as to make impossible any immediate improvement in construction.

In other industries reductions by manufacturers and first hands have compelled cuts all along the line and have caused holders of intermediate stocks to stand losses in shrunken inventories. In the building field such losses are not necessary as dealers and jobbers have no vast supplies stored. It is more nearly a direct producer-to-user business.

Apparently the opinion of "the man in the street" is going to have a great deal to do with the immediate future of construction. Any great private construction movement will come largely from the erection of individual homes and small flat buildings and the owners of such projects are governed largely by their opinion of conditions in general rather than by any knowledge of conditions in the building industry. It seems probable that the growth of industrial plants in America in 1918 and 1919 has discounted the need for a large addi-

tional movement of factory space at present. The present trend of financial venture seeme to be toward either long-time, non-speculative investment or short-time, high-return, speculative investment which would preclude an unusual volume of apartment or office-building construction.

In public statements, in testimony before the senate committee and in private conversations, producers of materials are a unit in stating that reductions at the present time are not justified by lowered costs. Opinion seems to be about as unanimous that cuts will be justified in the course of a few months—possibly by March first, though Eastern opinion has inclined to expect earlier reduction. Decisions as regards construction next year are being made now. Every engineer and architect in the country is busy on plans which will either be postponed or advanced in the next few weeks. Bond issues for public works are coming to a vote or being offered for sale.

The longer the coming readjustment of price is delayed the less new work will be undertaken in the coming year. It seems that the wise thing to do is to make immediate surveys in every line, to determine the level at which the price should be maintained next year. These surveys should take into consideration every factor which goes to reduce costs—improved transportation, cheaper coal, reduced labor cost due to wage reductions (if any) or inereased efficiency and lowered interest rates on investment. The price, when determined, should be put into immediate effect, even at the cost of a temporary loss.

This is not a matter of charity to would-be builders. It is purely a problem of merchandising. That which will work to the ultimate benefit of a trade in general is a wise thing to do even if it involves a present sacrifice on the part of the seller and permits particularly advantageous buying, for the time being, on the part of the consumer. Such a movement, at the present time, holds promise of greater benefit to the construction industry during the next year than has ever seemed possible at a similar period.

Sufficient plans for construction are now "on the boards" to insure, should the major portion of them go ahead, a banner year in 1921. Reports from every city of the country show millions and even hundreds of millions of dollars worth of construction scheduled to go ahead as soon as conditions permit.

Current tendencies in the industrial and financial world are encouraging, not for the outlook they give for the next few weeks, but for the promise of a good year in 1921. The process of descending from the perilous peak of inflation, which existed at the beginning of this year, is well under way and seems certain of accomplishment without the morale destroying shock that was feared.

Putting Up Stock in an Attractive Way

It is generally considered good practice by manufacturers of lumber to make their stock appear attractive to the customer's eye and yet some of the staunchest believers of this doctrine are quite content if the lumber passes under the grading rules satisfactorily.

A great many manufacturers do not give this important item of attractiveness a particle of consideration so long as the stock passes under the margin of the rules.

Manufacturers of other lines find their products sell more readily if placed in attractive packages and boxes, not neglecting the fact, however, that quality must accompany the product or the reward of a neat looking stock will be nil.

The question is, how is this applied to the lumber industry? One method which has been noticed recently by this journal is in the manufacture of siding. One firm made a particular effort to give this product the best appearance possible by bundling it, which brought in several letters of commendation. They also take great pains with their lath, taking particular care to have them smoothly finished and square and sharp at the ends. Several customers receiving cars with lath end filling wrote in mentioning specially the neat condition of the lath.

The good appearance of a few items such as mentioned, often overrule any other little defects that might come to the notice of the buyer. This, however, should not give license to the shipper to become careless in serving his trade, but on the other hand, if the habit is created of placing stock before the customer in a neat condition it will surely result in future trade from the satisfied customer and his friends.

It will be remembered, however, that one good shipment will not cover up several previous ones of an indifferent service, but will spoil the good effect that the one neat shipment might have created.

The customer is not the only party which will benefit by the careful handling of the stock. The practice will also inspire the manufacturer to make the rest of his production as neat and attractive as the lath and siding. It is a well known fact that care in a few things will soon be extended to other items and soon the commendable habit will be noticed in every line of stock turned out.

Record Shipment of Railway Ties

The most expensive cargo of British Columbia lumber which has ever left Vancouver is reported to be the one that left recently on the SS. City of Victoria, of the Canadian Western Steamship Line, for the United Kingdom. This boat has on board 4,906,962 feet of railway ties and crossing timbers for the British railways, and will be discharged at Garston and Birkenhead. This load includes a winter deck cargo.

Some years ago larger loads are reported to have been shipped, but the prices of lumber and freight rates were much lower than today, with the result that the cost of the cargo was not much more than half of the shipment made recently by the city of Victoria.

This cargo is Canadian grown and cut, is on a Canadian-built ship constructed in the Coughlan shipyards, and the shippers are Canadians, H. R. MacMillan & Co. of Vancouver.

Speaking of the shipment, Mr. MacMillan says: This cargo consigned to the London and North Western Railroad at Birkenhead and the Great Western Railroad at Garston carried sufficient railway sleepers for 66 miles of single track railroad. These sleepers will be creosoted after their arrival in England and are expected to serve the British traveller and shipper for a quarter of a century.

THE LARGEST SLASHER DOING BUSINESS

Sixteen, 42-inch inserted tooth cut-off saws operating on one slasher rig is probably the record number of this type of saw doing business in the world.

These saws are operating daily in the mill of the Cowan-Willamette Pulp & Paper Company of Oregon City, Oregon. They are 42 inches in diameter and six-gauge, and were selected from regular Simonds stock

As there was no mill at that time that had a complete slasher rig made up of inserted tooth cut-off saws, these were selected for a trial by the Crown-Williamette Company. They at once justified their selection and gave excellent results.

Through the courtesy of the Crown-Williamette Company, the "Canada Lumberman" is privileged to reproduce the illustration showing these 16 Simonds saws in operation.

Pulpwood and Its Varied Activities

Pulpwood Supply Large—Demand Quiet

Reports from northern Ontario and western Quebec indicate that pulpwood is being cut in large quantities but that the market is dull at the present time; in fact operators are being offered much more than they can handle, and some of the large consumers are not in the market just now owing to the quiet state of the paper trade across the border and the reaction which has now set in in some mills in Canada. One large Toronto company said this week that they were not buying any spruce pulpwood, although they were offered many thousand cars every week.

Prices have fallen considerably, due to surplus production and diminished demand, and it is predicted that rough spruce will be selling as low as $12.00 per cord south of North Bay before many weeks elapse. A large amount of poplar has also been taken out and the supply is far greater than the requisition.

The prevailing high prices and shortage in pulpwood during the first few months of 1920 resulted in the settlers, farmers, sawmill men and contractors taking out larger supplies than ever. With the industrial reaction, which has been setting in, and the general downward trend of prices in other commodities, pulpwood has, to a considerable extent shared in the decline. Then labor is now cheaper and more plentiful at the different points, which has resulted in men becoming more efficient and a larger number of cords taken out in certain districts.

Good Progress Evidenced at Spruce Falls

The Spruce Falls Company, Limited, of Neenah, Wisconsin, who are erecting a pulp plant at Spruce Falls, Ontario, are making splendid progress on construction. The weather has been very favorable and the company hope to have the sulphite plant in commission early in May next. The mechanically ground wood plant will not be running until the end of 1921 because its operation depends upon water power and it will not be possible to get the hydro-electrical development completed until late in the fall. The present project of the Spruce Falls Company does not include the installation of paper machines, but these will come later. The company now have two saw mills in operation cutting lumber for their construction programme. So far as woods activities are concerned, the Spruce Falls Co. say that they have been carried out on such a scale that they feel confident a sufficient supply is ensured to take care of all their 1921 requirements.

Not Enough Pulpwood to Go Round?

"Our views of the pulpwood market at present may be summed up in the following," says the Rimouski Lumber Co. of Rimouski, Que., of which J. Henry Poulin is manager.

"The word has gone forth from the powers that be, that the price of pulpwood "must come down." Cancellations of contracts and attempts to cancel are the order of the day. Mills are "not buying" and 'they have all the wood that they require for several months.'

"Boys don't get feverish to throw away the wood that cost you money—the mills have not all the wood they want for several months, although the 'bigger fish' have their usual supply on hand from twelve to eighteen months ahead. Any smaller mills can get their supplies from the bigger mills to discourage the shipment of higher priced wood from Canada.

"The banks are pressing the pulpwood men to take down their discounts, and some are forced to sell wood at about $8.00 to $10.00 per cord less than it is worth.

"There is not wood enough on hand in Canada to go around. Just refuse to ship at anything under a reasonable price, a price proportionate with the cost of production, and watch the high-handed methods of bringing down the price disappear like a vapor.

"They want your wood—they need your wood; but their holiday gift to you is to deprive you of the price you deserve and can get if you hold off shipments. Don't be feverish to ship at any price. You'll get yours by waiting. $40.00 per cord delivered in New York or New England states and payable in American funds, is only a fair price as compared with what they get for pulp themselves and the price of this is so high that pulpwood at $40.00 is cheap.

"You'll be told that $25.00 is about right, and they can take in a few cars at this price—and believe us they will take all you can send them—although they have all they need for months to come.

"Our estimation of a fair price to-day is anywhere from $35.00 to $40.00 per cord delivered and payable in American funds, depending on freight rates and cost of production, of course. Don't be bamboozled into giving away anything. Don't shiver from the cold in your feet. Wake up! Take heed! Hold tight! Don't worry! Get your price and be happy. Let us repeat, there is no reason or excuse for loss in this business. Remember humanity is like so many sheep, where one goes, they all go. Reduction in sugar and dry goods has nothing to do with the paper business. Have you noticed any paper mills that did not make huge profits, after paying what they termed the crest of the pulpwood price?"

New Pulp Mill For Fraser River

The site of the new pulp and paper mill, which is to be constructed in British Columbia, will be up the Fraser River, according to F. P. Jones, of the Canada Cement Company, Montreal. Mr. Jones, who will be associated with Angus McLean of the Bathurst Lumber Company, and Senator C. Edwards, of Ottawa, in the project, returned lately from British Columbia with Mr. Maclean.

"There is no doubt that a mill will be constructed," said Mr. Jones, "the size of which will depend upon extent of the Government leases. The forests of British Columbia are unsurpassed, and a very great future awaits the pulp industry there; consequently there need be no hesitation in building a mill of considerable dimensions. The lumber business in British Columbia is not prosperous at present, due no doubt to prevailing world depression. Indeed it is almost at a standstill. The high cost of rail haulage has contributed to make the industry unprofitable, and a very large number of employees have been thrown out of work."

Great Strides in Great Industry

The rapid growth and tremendous expansion of Canada's pulp and paper industry during the past thirty years reads more like a romance than a record of actual achievement. In 1890 the total pulp and paper exports of the Dominion were valued at $120.00; twenty years later they had increased to four and a half million dollars and ten years later, in 1920, the ascension was so great that the exports exceeded $104,000,000. To-day the industry ranks first in value of exports, exclusive of farm and kindred products.

According to returns recently brought down by the Dominion Bureau of Statistics, over a quarter of a billion dollars is invested in the pulp and paper industry in Canada. There are 99 plants of which 33 make paper only, 39 pulp only and 27 both pulp and paper.

The production of pulpwood in 1919 was valued at $48,562,086 and paper reached the top-notch figure of $91,362,913. Production has been much larger during 1920 than it was in 1919, and when the returns for 1920 are completed, they will show that much greater strides have been made in the industry.

Brompton Company Had Record Year

The Brompton Pulp & Paper Co. has been making rapid progress of late years and expanding in many directions. Recently a deal was completed whereby the company acquired extensive and valuable pulpwood limits in the Lake St. John district, and the new holdings are among the finest timber areas in the north. There are in the limits 634 square miles,, or 405,760 acres. It is now stated that the wood reserves of the company are sufficient to supply all the requirements for practically a century. The total limits now stand at 717,528 acres.

Another gratifying evidence of the prosperity of the company is afforded in the annual statement which was recently brought down, covering twelve months ended October 31st last. It is the best statement which has ever been issued by the company since its inception and shows that the Brompton organization had a record year under the able direction of J. A. Bothwell, general manager. The earnings are at a new high level and the financial position of the company is exceptionally strong. The profits for the year amount to $1,853,588, which is a gain of nearly 70 per cent. over those of 1919 when the figure reached $1,098,337. After deducting $235,122 for depreciation against $188,499 last year, together with bond interest and preferred stock dividends, there remains a balance available for application to the common shares of $1,340,886, as compared with $687,383 in 1919 and $637,274 at the close of the preceding twelve months' period. The results of the year were equivalent to $9.57 per share on the outstanding 140,000 shares of no par value, for which the old securities were exchanged earlier in the year. Last year the company

The block pile for the winter's supply of pulpwood of the Laurentide Co., at Grand Mere, Que. The picture was taken out the time the pile was measured, when it was found there was almost 90,000 cords of wood in it. The quantity will last until the river is open in the spring, and is one of the largest piles made in recent years. The cut is presented in this issue through the kindness of "The Digester."

earned 9.8 per cent. on its common capitalization, and 9.1 per cent. in 1918.

This excellent showing is further enhanced by the fact that the earnings referred to are only those of the Brompton Pulp & Paper Company and do not include those of the concern's two United States subsidiaries, the Groveton Paper Company and the Claremont Paper Company, in which the Canadian enterprise owns all the outstanding common stock. In his report to the shareholders, the president, F. N. McCrea, M.P., pointing this out, states that the earnings of the two subsidiaries "have not been taken into account in any way, as their fiscal years do not end until December 31."

"It can be stated, however," Mr. McCrea goes on to say, "that the combined earnings of these two companies will approximate those of the Brompton Pulp & Paper Company, Limited."

After disbursing among shareholders the sum of $665,000 during the year, against $350,000 in the two previous years, there remained a surplus of $675,886 to carry into the current year's accounts, compared with $337,383 in 1919, and some $50,000 less in 1918.

The balance sheet portion of the statement reveals a highly comfortable financial position, current assets exceeding liabilities of a similar character by well over $2,000,000 despite the extensive additions to the East Angus plant of the company in process during a period. A bank loan of $375,000 which appeared in the exhibit of a year ago was wiped out altogether, and, in addition, the company was able to add the substantial sum of $372,326 to its investments during the year, bringing those up to $1,721,418. Cash holdings, also, are shown at $244,111 in this year's statement, against $83,831 as at October 31, 1919.

November Exports of Paper Are Large

Canada's pulp and paper exports for November were $14,355,435. an increase of $6,338,445 over the same month in the previous year. The October earnings were nearly two millions higher at $16,706,005. There were 63,381 tons of newsprint, valued at $6,926,465, exported in November, of which the United States took $6,202,816.

Exports for eight months ended November amounted to $118,303,000.

How Pulpwood Prices Have Dropped

A lumberman, commenting in a general way on the lumber trade, speaks of a decline in the price of pulpwood to $14 a cord, which, it would seem, is about $4 lower than in the early portion of the season. He says that at the price mentioned the operators are barely paying expenses, owing to the costs of producing the wood. Predictions of a decline to $12 are heard. He declares that if such declines should take place, some lumbermen will cease to produce pulpwood and will turn their attention to lumber. For a period, it would seem, the production of pulpwood was more remunerative from the standpoint of the lumbering companies than the production of lumber. One pulpwood operator exhibited contracts made with a pulp company in October at $18,50 a cord for rough wood and $28,50 for peeled, and said that to-day he could not get more than $12 or $13 for a cord of rough, while the price of peeled wood, not long ago as high as $30, is down to $19 and $22 a cord.

Unsettled Conditions Handicap N.B. Industry

There is every evidence that the lumber cut of New Brunswick will be less this season than ordinarily. With the market in its present unsettled condition the big operators are not planning any extensive work in the forest, and few camps are hiring the usual number of men. As a result many laborers who have been finding winter employment in the woods of the province, must seek new occupations this season. Many of them are seeking employment in St. John in consequence of the re-opening of the winter shipping activity.

Dryden Co. Taking Out Much Wood

W. F. V. Atkinson of Dryden Pulp & Paper Co., Dryden, Ont., spent the Christmas holidays with his wife and family in Toronto. Mr. Atkinson, who is now woods manager and superintendent of the hydraulic power and forestry departments of the Dryden Company, states that 40,000 cords of pulpwood are being taken out by the organization this year either through their own woods activities or by jobbers. Some 700 men are engaged in the work and the wages paid are from $50 to $60 a month. This figure is considerably lower than the rate which prevailed last year, and the most efficient men are engaged. The capacity of the plant is being considerably increased by the construction of a ground wood pulp department and additional water-power development.

New Industries in Pulp Line

The National Fibre Co., Ltd., the outcome of capital and enterprise of a number of Ottawa citizens, have purchased a former factory premises at St. Romauld, situated on the south shore in the county of Levis, some eight miles from Quebec and in close proximity to the Quebec bridge. The site is an ideal one for such a plant for the manufacture of fibre boards and the making of cheese and egg boxes, etc. The machinery is now being installed and operation of the plant will begin in the middle of February.

In the meantime a new and extensive pulp and paper company is negotiating for the establishment of a plant at St. Michel's Cove, three miles from the city of Quebec. The location sought lies on the river frontages of the St. Lawrence on the line of the Canadian National Railways. This plant was to have been established at Three Rivers, but on second thought, the promoters have come to Quebec and are negotiating for private properties in close vicinity to the factory site needed to build and house employees. The site has been acquired, and until all arrangements are completed, the promoters are reluctant to give out a statement for publication.

Lumbering Activities from Coast to Coast

The last issue of the Labor Gazette, Ottawa, contains the following interesting survey of lumber conditions and operations during the past month:

Lumbering operations during November were reported at Charlottetown to be quiet. At St. John several sawmills closed for the season. At Fredericton a greatly reduced production of logs was anticipated in the coming winter, some former large operators remaining out altogether. The demand for men was reported at Bathurst to be slowing down, some of the camps having filled up. In Quebec district a demand was noted for men for the woods, but as wages were only about half those of last season men were unwilling to go; it was anticipated that next winter's cut would fall far short of that a year ago; the sawmills all closed down for the season. Sherbrooke reported lumber, tie and pole camps all busy, and saw and shingle mills fairly active. The lumber industry was reported at Sorel to be quiet. At Ottawa and Hull between 600 and 700 men were thrown out of work by the closing of a large sawmill. Logging was less active in Peterborough district, but the sawmills worked to capacity. Owen Sound reported that the lumber camps on the north shore of the Georgian Bay were busy, but some of the sawmills closed down for lack of logs. Sault Ste. Marie reported the lumber camps well filled, with no demand except for experienced woodmen; lumberyards were quiet. A demand for loggers was noted early in the month at Cobalt. North Bay, Sudbury, Pembroke and Timmins, but most of these camps were filled up later. Winnipeg reported the logging camps filling up in Northern Manitoba, but some demand for labor continued in The Pas district. Regina noted similar conditions in Saskatchewan, vacancies in the camps being filled by men lately working in the harvest fields and in threshing. At Prince Albert many men were unemployed and wages were reduced. In Alberta logging operations were rather quiet, some camps closing down and the demand for men generally falling off. Fernie reported the period of depression in the lumber industry as having reached an acute stage during November, the lower price of lumber products being credited with the decline; not a sawmill in the district was working, and few logging camps were open, wages being reduced, and many loggers unemployed. Nelson reported many saw mills closing for lack of market. At Cranbrook the lumber camps were filled, no more men being taken on. Vancouver reported that almost all lumber camps were practically closed down; saw and shingle mills were also very slack, many being idle. At New Westminster one lumber mill closed for two months and the other mills ran much below capacity. Similar slackness was reported in the camps at Prince George and Prince Rupert, many large camps closing down, the only demand being for tie-makers along the line of the Grand Trunk Pacific Railway. Victoria reported dull conditions in the industry on Vancouver Island. Nanaimo reported that the closing down of logging camps and mills in all parts of the Island had thrown many men out of employment.

Would Cost Two Thousand Per Room

It is reported that bids received for proposed new Statler Hotel, at Buffalo, N.Y., indicated cost would be about $2,000 per room over cost per room of Pennsylvania Hotel in New York. As the new hotel was to have 1,000 rooms, estimate indicated total costs of $2,000,000 over cost of the Pennsylvania Hotel. As Pennsylvania Hotel is twice the size of the Buffalo hotel project, cost of duplicating the Pennsylvania at present quotations would be $4,000,000. It is understood estimates received were too high, and building will be deferred for the present. Steel men say that while material costs have come down to or close to the Pennsylvania figures, labor building costs have not come down, and it was higher labor costs that account for most of the increase.

Some Terse Comment on Building Costs

It seems the lumber business comes in for a good deal of abuse these days by prospective builders. Retailers say that it is an everyday occurrence now to have a man call and upon receiving prices of lumber start in on a tale of woe about the high cost of lumber, the injustice of present prices.

As an example of effective selling talk with which one dealer explains the situation to these customers, who are apparently ignorant in regard to the itemized cost of building a home, he asserts:

"Lumber prices are lower all the way up to 20 per cent. and over, and with a few items like lath, still more, and we have reduced our prices accordingly. We are glad lumber has been the first important commodity to come down and believe it will give a decided impetus to building operations, which had been checked by rising costs and transportation. However, the public generally has had a wrong impression about the relationship of lumber prices and the cost of the finished building, especially as applied to work on residential, apartment houses, etc. If you were going to build a ten thousand dollar house how much cheaper do you think you could build it if you were made a present of lumber? The house would still cost you $7,500.00, so you see there is something else besides lumber that enters into the building of your home.

"Labor is the big item that eats up the price and this item injects itself into the manufacture of the many other materials which go to construct the house, such as cement, brick, lime, plaster. Then there is the plumbing, wiring, and also the labor employed in the mill work. All go to make this the most important thing to consider and until labor becomes cheaper, building will continue to be high. Remember, if every item in the construction of a home were reduced in price in comparison with the lumber bill, building would not be delayed by so many prospects as is the situation at the present time."

Death of Mr. Fenwick C. Riley

Returning from Philadelphia where he had been to consult a specialist, Mr. Fenwick C. Riley, general manager of Bloedel, Stewart & Welch, Limited, Vancouver, passed away recently just before his train reached Seattle. The late Mr. Riley had been well known in Vancouver since 1912. He had been manager from the start of his firm, which carries on large logging operations at both Myrtle Point and Union Bay, B.C. It is said that their work in these two places are the greatest strictly logging operations on the coast. Mr. Riley, who specialized in the development of high lead railroad logging, was born in Auclaire, Wis.., in 1878. He came west when very young and had been connected with Mr. Bloedel ever since. His death was not entirely unexpected as he had a dangerous seizure last August and underwent a serious operation in October. Mr. Riley was proud of his work during the war as a superintendent of logging operations for aeroplane spruce, under the direction of the Imperial munitions board.

Building Costs Will Not be Lower

The public is not going to buy houses one whit cheaper in the spring, and building activity will recommence with a bang, according to S. B. Green, of Toronto, who points out the incalculable harm the present rumors of lower prices in the spring are going to have in further accentuating the number of people who will be living in cramped and unhappy conditions. "I offer my opinion as a builder in Toronto who completes from 30 to 60 houses a year and who is acquainted with building in general throughout Canada and the United States," added Mr. Green. The rumor that there is no money for loans is absolutely false, he declares. "There is more private money for acceptable loans on houses now than at any time in the past year, with conditions getting brighter.

Mr. Green believes that he can say with absolute safety that there will be no drop in the wages of skilled business mechanics, and that the prices of building materials show no trace of a revision downwards. On the contrary, he feels that in many items there may be a slight rise very soon. "I frankly admit that, in some retail lumber yards hemlock and fir can be bought for practically wholesale prices. What we have seen lately in the clothing market, is true of many local lumber yards. They are overstocked, and are forced, because of the temporary absence of building, to turn their stock into money. But I submit that 'he who runs can read the signs.' No merchant can buy and sell at the same price. Their overhead must be met, and there must be a profit. Prices will advance the moment their stock has reached the point where buying is necessary. Doors and sashes and various kinds of mill work are, also, slightly lower now because mill owners find it necessary to keep their mills going and retain their better men, even if, for the present, the cost equals the selling price.

"As a result of this waiting policy there will be a greater shortage in all kinds of building materials and houses," continued Mr. Green. "As to brick, especially the finer grades, there is not 1 per cent. of a decline and none in sight, because the labor used here is specialized to a degree. The price of coal which is one of the biggest factors in the manufacture of brick to-day, also shows no trace of becoming cheaper. Cement, lime and sand, too, show no decrease. Heating, both hot air and hot water, instead of showing any decline, continue to advance.

"The average home builder would far rather borrow his money from loan companies than from governmental housing commissions," concluded Mr. Green, "because of the delays and restrictions that are always connected with governmental departments. It has been my experience that, no matter how tight the money markets, there are some good sources never closed, and never more than 7 per cent."

The workman is defended by this builder against the common attacks from people who do not employ him. "He is turning out just as honest a day's work as he ever did, quality and quantity jointly considered."

Mr. Long Elected Hydro Commissioner

Guy H. Long, Hamilton

In the recent municipal contest in Hamilton, Guy H. Long, of the Long Lumber Co., wholesale lumber dealers, and of the Consumers' Lumber Co., retail dealers, was returned by the electors of the Ambitious City as Hydro Commissioner. His opponent was Gordon Nelson, who was Labor Commissioner for the past year. It was prophesied that Mr. Long would be defeated. but as the late Sir John A. Macdonald said once upon a time, there is nothing so uncertain as an election or a horse race. Mr. Long won by the handsome majority of 3,315, which is a splendid showing. His many friends are congratulating him on his success at the polls, and are confident that he will render faithful, efficient, service during his term of office. Mr. Long is well known in the lumber industry with which he has been associated many years. He is one of the charter members of the Wholesale Lumber Dealers' Association and, at the annual meeting held a year ago, was elected a director for 1920. At the annual gathering of the Ontario Retail Lumber Dealers' Association in February last at Hamilton, Mr. Long was chairman of the Committee of Reception and Arrangements and much of the success attending the convention was due to his active personal efforts. He has been for some years a director of the Y.M.C.A. and held various other positions. His health, which for a considerable period was not up to the mark, now permits him to take hold of his business and other duties with his old time vigor. Mr. Long is an ardent hunter and fisherman and interested in athletics, motoring and other pastimes.

New Wholesale Lumber Company Formed

A new wholesale lumber company, which has been incorporated under a federal charter has been organized in Ottawa, under the name of the Story Lumber Co., Limited. The active head of the concern is John A. Storey, while W. F. T. Story is vice-president G. A. Routliffe is director. The head office which is at 701 Hope Chambers, Ottawa, is under the direct supervision of John A. Story and the old office of W. F. T. Story at, 30 St. John St., Montreal, will be carried on, under his supervision, as a branch. George A. Routliffe will, in general, superintend the culling and outside work of the company.

All members of the firm have had a long and varied experience in the manufacture, grading. marketing, and shipping of lumber to the various markets that Canadian forest products enter.

John A. Story has for the past twenty-three years been superintendent of the saw mill and lumber department of Fraser & Co., and since its inception in 1910, the vice president and manager of the Fraser Bryson Lumber Co. W. F. T. Story has been in the wholesale business in Montreal for a number of years, latterly paying more attention to hardwoods and specializing in birch. George A. Routliffe has been yard superintendent of Fraser & Co.'s mill at Deschanes, Que.. and previous to that time with the George H. Perley & Co.'s spruce operations at Calumet. The company will handle the usual Canadian lumber products of white pine, red pine, spruce and hardwoods, as well as lath and other by-products.

How Canadian Woods Are Classified

The question has been asked several times why poplar is classed as a hard wood.

The question has been asked also why tamarack is classed with the conifers and not with deciduous trees (meaning trees from which the leaves fall in winter), says "The Broke" of Iroquois Falls, Ont.

The answer is simple. "Hardwood" and "deciduous" are terms used to describe certain qualities of trees, but do not decide the class to which a tree belongs, have nothing to do with classification. The term hardwood is, however, frequently used (though wrongly so) to designate the class of trees, most of which are hardwood. It is this which causes the confusion.

(a) All trees are divided into:
  (1) those growing in annual rings;
  (2) those growing in a mass without rings.

The only one of interest in Canada is the tree with rings which includes practically all-maple, beech, oak, elm, pine, balsam, spruce, tamarack, and a host of others.

(b) Trees growing in annual rings (called exogens) are divided into those:
  (1) which have naked seeds (called gymnosperms);
  (2) which have seeds with a covering over them (called angiosperm.

The conifers, spruce, balsam, tamarack, pine, etc., have naked seeds, so they are put in one class, gymnosperms.

Maple, beech, birch, poplar, etc., have seeds with a covering over them, therefore they are in the other class, angiosperms.

Any tree in either class may be hardwood or soft wood. Most of the hardwoods have seeds with a covering (angiosperms) but not all, tamarack for instance. Also, poplar is in this class because it has covered seeds, but it is not a hard wood.

Any tree in either class may be deciduous (lose its leaves in winter). Most of the deciduous trees have seeds with a covering, but not all, tamarack for instance.

Perhaps the distinction would be plainer by giving this example. If a group of men, some of whom have lost an arm, are classified as having one arm or two arms, and a hunderd men are found to have two arms, and of these one is a black man and the others white, the group would naturally be called white group. But the black man would not be white; color is not the basis of classification, it is having one or two arms. Similarly in trees, poplar is in the same class as the hardwoods because it has covered seeds, but it is not hardwood, for hard and soft is not the basis of classification. In other words it is the nigger among the hardwoods.

Similarly with the tamarack, it is classed with the evergreens because it has naked seeds, but it is itself deciduous, that is, loses its leaves in the autumn. It is the nigger in the evergreens.

Make Lumber Price Facts Known

Perhaps never before in the history of the lumber industry has it needed publicity—of the right kind—more than now. Whenever a great change takes place in the conditions or methods of any industry it is important that the public be informed regarding it; and it is always better that this information be provided and disseminated by the industry itself than by any outside agency. When the price of lumber went up to unheard-of heights the news was quickly spread; but now that the price has gone down until it is close to the cost of production the industry must tell the world about it if the fact is to be made known. says the "American Lumberman."

Comparisons are said to be odious; but just now the making of comparisons of prices appears to be the most popular indoor and outdoor sport. The results of such comparisons depend altogether upon the facts or alleged facts used in making them. If conditions affecting lumber prices are made widely known by the industry itself, if it is persistent in its efforts to keep the facts before the public, it will be less likely to suffer from the dissemination of "facts" that are not facts. Every man and every industry is entitled to its "day in court." The passport to the court of public opinion nowadays is advertising in one form or another.

All lumbermen ought to do what they can, not only to place the facts before the public, but they ought to correct false statements that come to their attention in the public press regarding lumber prices and conditions generally in the lumber industry. Several of the lumber associations have set for themselves the task of correcting misstatements of this kind in the public press. In this work they should have the aid of individual lumbermen; indeed, where the latter are sure of the facts involved they may place them directly into the possession of those who make the misstatements. Some lumbermen make it a practice to nail untruths of this kind; it would be better for the industry and the public if all would do so.

What Laboratory Has Done and Can Do

The report, which has been received by the Department of Agriculture at Washington, D.C., from Col. Greeley of the Forest Products Laboratory, Madison, Wis., is causing considerable interest among manufacturers and woodworkers. A representative body of wood users and manufacturers will appear before the sub-committee on expenditures in the Department of Agriculture to urge the importance of the work carried on by Col. Greeley and staff.

In the report submitted by the Laboratory there is an appeal for more working facilities. It also gives the cost of investigations to be $2,000,000 and the benefit of experiments and examinations to be worth $30,000,000 to manufacturers and dealers of wood products. Further statements in the report explain how the ending of the European conflict did not terminate the extended investigation into the qualities of plywood; the examinations of white ash and other woods to determine the effect of spiral grain and other defects and blemishes on strength.

Breezy Happenings from the East

The lumber situation in the province of New Brunswick remains much the same as it has been for some months and at present there are no indications of a betterment. Conditions in the woods are said to be good for operations and the crews at the various camps are working away. although the amount of their cut this winter will be curtailed from thirty to fifty per cent. of last year.

There is a large amount of lumber purchased by the British and French governments still piled up on wharves and along the railroad in this city. A surveyor in conversation with a correspondent of the "Canada Lumberman" says that he estimates that there is at least 75,000,000 feet of manufactured spruce on wharves along the water front and piled elsewhere. Much lumber, destined for overseas has been exposed so long to the elements that it is showing ill-effects. It is also eating up valuable space, which could be utilized by the mills for their yearly cuts. Up to this time last winter lumber shipments overseas were quite heavy, but now they are very light. The uncertainty of the market is undoubtedly responsible for this. It is a case of the "irony of fate." When lumber was greatly in demand there was a lack of bottoms and now that both steaming and sailing vessels are in abundance and seeking freights the bottom has to fall out of the lumber market.

These conditions also prevail in Nova Scotia. Henery C. Sharp, who was employed as superintendent for the Draper Lumber interests in Parrsboro, N.S., passed through St. John recently and during an interview said that the uncertainty of the market had caused a suspension of his firm's activities. The company has large holdings in and about Parrsboro. He said that the pulp situation was equally bad and he attributed this to a concerted effort on the part of paper manufacturers to drive down the price of pulp wood.

Ernest Michaud, a well-known lumberman of St. Quentin, N.B., died suddenly in Campbellton recently. He was there on business in connection with his industry. His passing will be regretted by all who knew him as he was a popular and enterprising young man.

Another man well known in the lumbering industry in New Brunswick, Joseph L. Allen, died recently after four weeks' illness. He was in his eighty-third year and in early manhood engaged in operations on Bear Brook and Little River. He became associated with the late Alexander Gibson, Sr., of Marysville, in the early sixty's. Later he became foreman for Mr. Gibson.

Small quantities of lumber are being shipped out of St. John on sailing vessels for various destinations. The majority of it is coming from up the bay in scows and is being re-loaded into the schooners.

Co-operative Publicity in House Building

The effect of timely. co-operative advertising has recently been demonstrated in a number of papers published in leading cities and towns in Canada. It shows evidence of goodwill and a community of interest that augurs well for a successful season.

Several journals have inaugurated what is known as a "Citizens' Home-building Page," and the idea is cleverly carried out. An outline of a house is shown complete from basement to attic with verandahs, porches, walks, doors, windows, etc. An Ottawa paper recently contained a full-page advertisement of this character. The house was blocked off into little squares and triangles, in each of which some merchant placed his individual ad. Each dealer took for his space that part of the house for which he was best equipped to furnish the material. The dealer in shingles placed his ad on the roof, while the dealer in furnaces used the basement to set forth his ad. On the roof occurred the little ads of M. N. Cummings, dealer in shingles, lath, sash and doors; W. C. Edwards & Co. (Ltd.), deale in lath, shingles, rough and dressed flooring and doors; James E. Wilson, dealer in sash, doors, mouldings, lath and shingles, and H. Dupis & Son, dealer in lumber roofing paper and firewood.

The Biggest Tree in the State

The prize for the biggest tree in New York State has been awarded to Charles J. Richards, editor of the Gowanda News, for an elm tree which is nearly thirty feet in circumference at 4½ feet from the ground.

The contest was opened by the New York State College of Forestry at Syracuse as the result of a question whether the Setauket tree was the largest tree of any kind east of the Mississippi. It was thought to be a matter of interest to determine which is the largest tree, and the contest thus started was taken up by New York Forestry, publication of the State Forestry Association, and American Forestry, published by the American Forestry Association.

The winning tree has these remarkable dimensions: Circumference, 30 inches from the ground, 34 feet, 2 inches; at six feet, circumference, 23 feet, 7 inches; height over 100 feet. It has no branches for 50 feet above the ground, and its circumference at that point is 20 feet.

Teddy's Delight is barred from the prize, though even larger, because it is not one tree but three. The George Washington cherry is probably the largest cherry tree in the country, fourteen feet in diameter. The umbrella elm is nationally noted for its symmetry, but was too small to compete with the Gowanda elm.

Air Craft in Canadian Forest Survey

An experiment in aerial forestry reconnaissance, by the Commission of Conservation and the Entomological Branch of the Department of Agriculture in Canada, resulted in determining the location and extent of the spruce bud-worm infestation, by observing defoliated spruce and balsam trees. The blight is spreading from the pulp-wood forests of northern Quebec into Ontario. This survey has the distinction of being the first aerial entomological study ever conducted.

Flights from the base of operations covered a radius of nearly a hundred miles. In four days' flying the main types, such as conifers, hardwood and mixed forests, recent burns, muskegs, and clearings on approximately 1,800 miles were mapped out. From 3,500 feet every block of any appreciable size of the various forest types was easily located.

The commission is planning to conduct, with the assistance of the Air Board, an extensive aerial survey of the forests within flying reach of the National Transcontinental Railway in Northern Ontario during the coming summer. By this means the existence or non-existence of commercial supplies of timber in these northern regions will be established in a shorter time and at lower cost than in any other way.

Traveling Boudoir for Speed Marvel

Man o' War, the world's greatest race horse, is as finicky about his habits of life and his personal comfort as any other petted darling of Fortune. The great racer is also, pound for pound, one of the most valuable pieces of property in the world, and S. D. Riddle of Glen Riddle, Pa., is more than anxious to make sure that everything possible is done for his comfort and health.

One of the methods by which this is accomplished is that a travelling boudoir has been arranged for the speed marvel and moves about the world with him. This boudoir is an immense body like a box stall, mounted on a big Packard truck. The rear wall of the box is hinged at the bottom and arranged so that it can be let down to form a gangway for the racer to enter his boudoir. Two other trucks of a like make are being used by racing men near Philadelphia for the purpose of transporting thoroughbreds. They are the property of J. E. Widner and J. B. Crozer.

Haileybury Men Return Safe and Sound

A recent despatch from Haileybury, Ont., says: Safe and sound, and quite unaware until they met the search party that there month-long absence was causing uneasiness among relatives at home, Marty Wright, ex-Mayor of Haileybury, and Charlie Wright, his nephew, turned up recently.

They experienced no trouble and were in no difficulties at any time. They were at the Anvil Lake Mining Company's property in the Maple Mountain section, and were detained there by the condition of the roads, which had been affected by the mild spell.

There is still no word yet of the fate of Chris McCool, the missing Pembroke lumberman.

Twenty-one Wooden Vessels Built

During the month of October, 21 vessels, of wood construction, were added to Canadian registry, as against three steam vessels of tonnage of only 3,837 and net tonnage of 2,169, and comprised eleven sailing vessels of 1,614 gross tonnage. three steam vessels of 2,075 gross tonnage, and seven gas vessels of 148 gross tonnage. The three steel vessels had a gross tonnage of 14,248 and a net tonnage of 8,770, and all were built at ports in Canada. The wooden vessels built in Canada of those added to the registry in October, included six sailing vessels, two steam vessels of a total gross tonnage of 247 and five gas vessels. There were purchased from foreigners five sailing vessels, one gas vessel and one steam vessel of 1,829 gross tonnage.

The process goes on of eliminating from the registry vessels that have disappeared from actual participation in the business of the country for years. In October there were removed from the registry 57 sailing vessels of a total gross tonnage of 3,912.31, steam vessels of 1,841 gross tonnage and sixteen gas vessels of 152 gross tonnage.

Western Ontario Lumberman Again Elected

Ald. F. E. Harley, London, Ont.

In the recent municipal elections in London, Ont., Frank E. Harley, who has been a member of the city council for the past five years, was again returned by the electors for another year of service as an alderman for Ward No. 2. Mr. Harley has long been a public-spirited resident of the Forest City and has served on all important committees of the council. He is also on the Board of the Western Exhibition. In the recent campaign he took an active part in promoting a by-law to provide the sum of one hundred thousand dollars for a motor bus system. Although the measure was defeated it was not owing to any lack of endeavor or support on the father of the project. A sample bus was being brought to London and was to have arrived a few days before the election in order to demonstrate this modern means of conveyance in handling city traffic. Through some accident while on the way from Akron, Ohio, the big vehicle did not reach London and was sent back. Ald. Harley says that he has proof that certain interests were at work to prevent the delivery of the bus and he is conducting an investigation.

Ald. Harley is head of the London Lumber Co., wholesale lumber dealers, with which firm he has been connected for the past twenty-three years. The London Lumber Co. specialize in native hardwoods and purchase the cuts of various sawmills in western Ontario. A certain amount of the lower grades of white pine and spruce are handled for crating lumber, boxing, etc. Many friends will congratulate Ald. Harley on his return for another term in the aldermanic arena.

'Planes Flew 9,000 Miles Last Year

A total of nine thousand miles is the flight record of the Laurentide Company hydroplanes during the season just closed, according to reports submitted by the Aviation Department. This represents a total flying time of 150 hours, which would make the average flying speed sixty miles an hour. During the summer, thirty-four fires were observed.

In all seventy-two flights were made, twenty-eight of which were for the purpose of taking aerial photographs of timber lands and limits. The remainder were no-photographic flights, mainly for the purpose of carrying passengers for inspections of various kinds. Forty-three passengers were carried during the summer. The seventy-two flights on the average were slightly more than two hours in duration.

A greater flying programme and a longer stay in the air per flight is planned for next summer, and the photographic feature is to be developed to a greater extent than at present, according to Mr. Ellwood Wilson, who said that the 'planes would be in the air at least four hours a day every flying day next summer.

Says Wisconsin Cut will be Small

That the business depression in the United States is general and is likely to continue yet a while, is the report that O. J. Haarlander, plant manager of the Canadian Edison Phonographs, Limited, St. Thomas, Ont., brought back lately upon his return from an extended business tour through the Middle West.

Mr. Haarlander left for the purpose of buying lumber for the St. Thomas plant, but reports that he refrained from buying on account of unsettled conditions. Lumbermen in Wisconsin, he reports, are planning to cut only about half the usual quantity of lumber this winter, believing that the future does not warrant greater production, and the mild winter so far has prevented much lumbering being done at all.

Wholesale merchants in the United States report very poor collections, Mr. Haarlander states, and poorer sales. He feels confident, however, that big business will succeed the present slump.

Harvey Derne Killed in Auto Collision

The news of the tragic death of Harvey Derne, Superintendent of Manufacture of the W. M. Ritter Lumber Company, Columbus, Ohio. comes as a great shock to the wide circle of his friends in the lumber and associated industries. With his wife and a party of friends he was returning home from the Columbus Athletic Club, early on January 1st, 1921, where they had attended the club's annual New Year party, when his car, which he was driving, collided with a heavy taxicab in Broad Street at Washington Ave. Nearly all of the party of eight in Mr. Derne's car were injured more or less seriously. Edwin L. Holloway, also of the W. M. Ritter Lumber Company, received painful internal injuries.

Mr. Derne was rushed to a hospital, only a few blocks away, but he was dead when the hospital was reached, and the belief is that death resulted almost instantaneously, from his impact against the steering wheel.

Few men had such a wide circle of friends in the lumber industry; his sterling qualities as a man, coupled with his business ability and technical attainments, made him a prime favorite socially with his friends, and gave him a place of distinction in industrial circles. Prior to his long connection with the W. M. Ritter Lumber Company. he was connected with Burns Brothers, the Chequasset Lumber Company, and the Raleigh Lumber Company. He was 46 years of age.

Will B. C. Mill Change Shingle Pack?

Resulting from a meeting of shingle manufacturers held recently in Vancouver, at which the proposal to change the style of the shingle pack was discussed, a canvass of all the shingle manufacturers in British Columbia will be made, in an effort to obtain the views of the industry on the proposal. The new style or standard pack, as it is known, was adopted at the recent congress of shingle manufacturers at Seattle, but as it was felt that all of the B. C. manufacturers did not agree with that decision, the meeting was called to obtain the views of the various local mills.

The general adoption of the change, it is stated, will put many of the mills, according to Western advices, to extra expense through the necessity of changing bands, employing additional labor and rendering useless considerable advertising matter. The change calls for a thicker shingle, laid five inches to the weather, with four bundles to the square or five bundles to the thousand. Many of the mills oppose the change on the ground that it was only a short time ago that the congress decided that shingles should be laid four inches to the weather and that the pack should be the square one.

The fact that the mills market quite a large percentage of their product south of the line will likely govern the manufacturers to a considerable extent in their decision.

Who Profits Most?

A business can be built in a year, in a month, even in a day; or the building of a business can command the greatest efforts of a lifetime.

Craft, cunning, shrewdness, if diligently practised, may bring a result resembling success; but the constant application of sincerity, experience, and craftsmanship build for a success that all others can but imitate and envy.

A great thinker once said: "A business is but the lengthened shadow of a man." Whatever is your aim, your ideal—rest assured that it is known to all with whom you deal.

Let no man be mistaken. Just as his true character will be known to his friends, so will the dominating idea behind his business be apparent in every transaction.

The business that, spurning opportunities for mean profits, devotes its entire energies to the development and maintenance of a reputation and quality, often envies the seeming progress of a sharp-trading competitor.

But such a business has none to envy. As by natural right, the superior quality of its product, honestly maintained, brings to it the friendship of each user. This friendship, multiplied again and again, builds a Good Will that is the greatest reward in business.

A business carrying the Good Will of its customers has little to fear. Temporary set-backs and interferences it may have, but as long as its ideal is maintained, it will rise above small mistakes and errors.

Let the directors of such a business keep their greatest asset and duty ever in mind, and profits will be satisfactory.

Look at the businesses that have had more than ordinary success. Who are they? They are the firms that do more than their duty, that give more than agreed, that work for quality and service rather than for profit.

For it is the rule that he profits most who covets profit least.—The Disston Crucible.

Personal Paragraphs of Interest

F. Adams, bookkeeper for the Fraser-Bryson Lumber Company, Ottawa, died suddenly on a Somerset-Street car recently. The cause of death was heart disease.

F. H. Bigwood, of the Canadian General Lumber Co., Toronto, was elected one of the directors of the Kiwanis Club, Toronto, at the annual meeting which was held recently.

Arthur H. Campbell, of the Campbell, MacLaurin Lumber Co., spent several days in Toronto during the recent holiday period, and called upon a number of friends in the trade.

H. E. Gill of Grenville, Que., and E, T, Willman of Calumet, Que., recently spent a few days in Toronto. They are both members of the staff of Edward Clark & Sons, Limited, Toronto.

Mr. John Tobin of Bromptonville, Que., died lately after a short illness. He was 68 years of age and was well known throughout this section. Mr. Tobin was connected with the Brompton Lumber Company and was a brother of E. W. Tobin. M.P.

The death took place recently in Edmonton of one of the oldest residents of that city in the person of John Walter, pioneer lumberman. The late Mr. Walter had been ill only a few days. He located in Edmonton over 50 years ago and was 71 years of age.

Lieut.-Col. and Brevet Colonel J. B. White, D.S.O., of the Riordon Pulp & Paper Company, will command the 17th Duke of York's Royal Canadian Hussars, which is the title on reorganization of the 17th Duke of York's Royal Canadian Hussars (Argenteuil Rangers).

J. A. McFadgen, president of the Manufacturers' Lumber Co., Stratford, Ont., left recently with the Canadian curlers on a two-months trip to Scotland. Mr. McFadgen is an enthusiastic member of the Stratford Curling Club, and the Canadian party, which consists of 32 devotees of the stane and besom, will play several games while abroad.

Christopher McCool, of Pembroke, Ont., overseer for the McCool Lumber Company, has been missing since Sunday, December 19, when he started to visit one of the firm's camps three miles north of the Montreal River. It is feared that he is either drowned or lost in the woods of the Upper Ottawa. Mr. McCool is a brother of C. A. McCool, ex-M.P. for Nipissing.

At the annual meeting of the Commercial Travellers' Association, which was held in Toronto recently, J. G. Cane, who is one of the veteran members of the Association and head of the firm of J. G. Cane & Co., wholesale lumbermen, Toronto, was re-elected a member of the Board of Directors. The forty-eighth annual report of the Board of Management showed a net surplus for the year of $120,106.00 and the total assets have now reached $1,636,943.00.

Francois Xavier Giguere who was a well-known resident of Quebec city, passed away recently in his 79th year. He had been for many years accountant for the firm of Simon Peters, lumber merchant, and was later connected with the firm of J. B. O. Gagnon in the same capacity. He was the father of Rev. Abbe Emile Giguere, one of the curates of St. Roch's parish and of Messrs. Odilon and Armand Giguere, as well as a brother of Mr. P. P. Giguere, Quebec. P. Q.

Many Lumbermen Honored in Elections

In the recent municipal elections in Ontario several retail lumbermen were elected to office.

J. A. Laberge, of Sudbury, is one of those who was returned by acclamation. He has been mayor of this progressive northern town for the past year, and has rendered capable service. He will again occupy the civic chair for 1921. Mayor Laberge is the youngest man ever holding the chief magistracy of Sudbury, being only 28 years of age.

Lieut.-Col. F. J. Carew, of the John Carew Lumber Company, Lindsay, who was a member of the council of that town during the past year, was re-elected in the recent contest. Mr. Carew is among the most progressive young business men of the county town of Victoria.

K. J. Shirton, of the Wm. Shirton Co., Dunnville, who is a member of the Executive of the Ontario Retail Lumber Dealers' Association and one of the livest wires in the retail lumber ranks in the province, was elected Mayor of Dunnville. That the citizens of this progressive town will be given efficient administration and faithful service under the direction of Mayor Shirton, goes without saying.

J. T. Payette, of P. Payette & Co., Penetanguishene, who are well known throughout Canada as manufacturers of lath machines and other allied lines, has been elected Mayor of Penetanguishene. Mr. Payette has long been a popular resident of that progressive town and is public-spirited and enterprising. He has always been interested in good horse flesh and has in his day owned a number of the speediest animals that ever circled a track.

Chas. L. Waterous, of the Waterous Engine Works, Co., Limited, Brantford, was re-elected water commissioner in Brantford in the recent contest. He defeated David Graves, secretary of the Independent Labor Party, by three votes to one.

Lieut.-Col. W. J. Green, of the Green Lumber Co., of St. Thomas, has been re-elected a member of the Hydro-Electric Commission by acclamation for the year 1921.

James E. Gardiner, junior member of the firm of P. W. Gardiner & Son, Galt, was elected an alderman in Ward 3 of that city at the recent contest. Alderman Gardiner had the honor of heading the polls with a substantial majority over his next competitor. This is his first experience in public life. Mr. Gardiner is well-known in the lumber and woodworking trade and has for years travelled throughout Ontario and the Maritime Provinces in the interest of the firm.

Wholesalers Will Hold Annual

The annual meeting of the Wholesale Lumber Dealers' Association, Incorporated, for the election of officers, receiving of reports, etc., will be held at the Albany Club, Toronto, on Friday, January 28.

Jarvis & Company, of North Troy, Vermont, have opened an office at 11 St. Lawrence Street, Montreal. They specialize in pulpwood.

William Rutherford, of Wm. Rutherford & Sons Company, Limited, has been elected a member of the Board of School Commissioners for the city of Westmount, P.Q.

The Hocken Lumber Co., Limited, Toronto, have recently started operations at their winter mill at Deer Lake, which is located 23 miles north of Parry Sound on the C.N.R. The capacity of the plant is about 40,000 feet a day and it is expected that the cut this season will run about 2,000,000 feet, all hemlock. The company have a large supply of logs on hand. The mill is equipped with a hot pond and is operating 11 hours a day owing to the limited period of winter sawing.

Good Points in Uniform Orders

Some good points in uniform order blanks are: (1) A definite time for shipment is specified, thereby enabling the dealer to know approximately when his materials will be delivered, and further assisting him in making definite promises to his customers.

(2) A definite contract at the time the order is placed. This means that when a certain amount of material is specified, that amount will be shipped. It does not mean that if prices advance after the date of placing the order that 15,000 feet of lumber will be shipped instead of 20,000, which formerly could be secured at the same figure.

(3) Definite terms of sale are specified, such as 2 per cent. ten days from date of delivery, giving the dealer the advantage of possible delay in railroad shipment.

(4) It is a written confirmation of agreement with a representative of manufacturer that the order is accepted. This prompt acceptance saves delays to the dealer, in waiting for his order to be accepted by the manufacturer after the salesman has taken it, that mean money to him.

(5) It is protection in case material shipped is defective. The order blank specifies that any material received that is not up to the standard can be held for disposal of the manufacturer.

Lumbermen Will Fight the Anti-Shingle Bill

Declare that Proposed Legislation is Unjust and Unnecessary—New Officers Elected by Lumbermen's Section of the Toronto Board of Trade

The annual meeting of the Lumbermen's Section of the Board of Trade, Toronto, was held on January 7th in the Council Chamber of that body. There was a representative attendance and A. C. Manbert, chairman, presided. An interesting report was presented by Secretary-treasurer H. Boultbee, showing a substantial balance on hand.

A long discussion took place relative to the function, usefulness and purpose of the Lumbermen's Section, which was organized a number of years ago and was a joint body of wholesalers and retailers. Weekly luncheons used to be held and later a Lumbermen's Credit Bureau was formed, and from this nucleus there grew forth the present strong branches of the industry in the Retailers' Association and in the Wholesale Lumber Dealers' Association. Each of these organizations is now in a flourishing condition. It was stated by Mr. John B. Reid that he thought the Lumbermen's Section, having accomplished its object, might well be disbanded. It had very little business to do now, but had carried out good work. During the first year or two much had been achieved in unity, co-operation and good ment Act, whereby a lumber dealer, so far as the business tax was concerned, would not be assessed on 50 per cent. of the assessed value of his premises, while a coal dealer got off with 30 per cent.

The discussion continued along general lines regarding the prestige, work and status of the Lumbermen's Section, and among others, who took part were: A. E. Gordon, W. C. Gall, A. C. Manbert, and it was finally decided by a unanimous vote that the section should continue.

The election of officers was proceeded with, and although Mr. Manbert was strongly urged to take the position another year, he stated that it would be impossible for him to do so.

The election and nominations then resulted as follows:

Chairman—W. J. Lovering.

Vice-chairman—T. A. Paterson (Mickle, Dyment & Son).

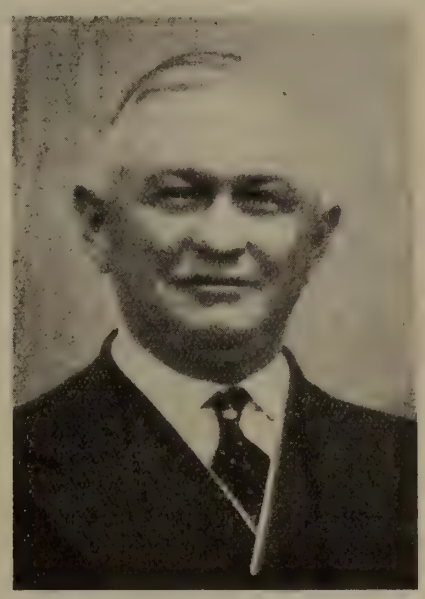
Secretary—Horace Boultbee.

Executive Committee—A. E. Clark, W. C. Gall, J. B. Jarvis, C. G. Anderson and Sam McBride.

Representative to Council of the Board of Trade—W. F. Oliver.

W. J. Lovering
Newly-appointed chairman of Lumbermen's Section of the Board of Trade, Toronto

T. A. Paterson
Newly-elected vice-chairman of the Section, who is widely known in retail ranks



Sam McBride
Newly-elected member of Executive and live representative on Exhibition Board

Hugh Munro
Late representative on the Council Board who is now in Southern California

will, and now there were separate associations of the retailers and the wholesalers, each enjoying strength and prosperity.

Sam. McBride, who was in attendance, said it was a big mistake to disband the Lumbermen's Section, which was one of the most important and influential in the Toronto Board of Trade. It was widely known and in a city of half a million population the lumbering interests should be actively represented in a great business aggregation like the board with its various activities.

T. A. Paterson also thought the Lumbermen's Section should be continued. It was a common meeting ground for both the wholesalers and the retailers, and there were many important issues which might arise, during the year.

A. E. Eckardt also endorsed the good work of the Lumbermen's Section of the past and thought it was still a necessary and a vital institution for the cohesion and unification of the lumber interests. Among matters which could be taken up, was fighting the proposed bill which will be introduced in the Ontario Legislature against the use of wooden shingles. He understood that while the exact provisions of the bill were not yet in draft form, the proposal was to hit the use of shingles for roofing of any new buildings, hereafter to be erected, nearer than 50 feet to an existing structure, and that it was also proposed that the same regulation as to distance be made to apply in all cases of extensive repairs. Such radical legislation as was mooted by the insurance men would be a hard blow to the retail lumbermen, who dealt largely in wooden shingles. The lumbermen should fight to the last ditch such an unjust piece of legislation as was outlined. Mr. Eckardt also thought other matters which might be taken up were to secure an amendment to the Assess-

Representative on the C. N. Exhibition Association—Sam McBride.

Representative on the Board of Arbitration—W. C. Gall.

Hugh Munro, the representative of the Lumbermen's Section on the Council of the Board of Trade for 1920 is spending several months in California, and was, therefore, not able to serve again. In his place W. Frank Oliver, son of Joseph Oliver, was nominated, and it is felt that if the lumbermen get behind him, they will have no difficulty in seeing that he is elected as their representative on this important body known as the Council. Mr. Oliver is one of the most popular young lumbermen in Toronto.

Sam McBride was commended for the good work he had done on the Canadian National Exhibition Board, as the representative of the Lumbermen's Section. He was also chairman of the Finance Committee of the C.N.E., of which for many years he has been a director. In a short speech, Mr. McBride stated that there had passed under his supervision during 1920 accounts amounting to $800,000, and that the board had had the pleasure of handing over to the Toronto city treasurer on the year's operations a cheque of $147,000. Extensive improvements were also being carried out to the grounds and buildings.

While other matters came up for consideration the principal one was along the line of opposing the introduction of the bill by the Ontario Fire Prevention League, which aims at suppressing and injuring the wooden shingle. The lumbermen intend to fight this measure from start to finish, and it is understood in their campaign they will enjoy the co-operation and support of several other important interests.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

WANTED Birch, Basswood, Brown Ash, Soft Elm and other Hardwoods. We will contract with you for your Winter's cut.

GREIG, MORRIS LIMITED,

Business Chances

Lumber Property For Sale

About 8,000 acres (held in fee) of lumber lands estimated to contain about 30,000,000 sp. feet of merchantable soft wood.

As a pulp wood proposition, this property should contain 60,000 cords or more.

Included with the lands, is a saw mill, equipped with Dutch furnaces, Waterous edger, planer and lath machine, and situated along the line of the C. N. Railway, the port lies within three miles of the mill, so that water shipments may be made as well as rail.

All the lands are within easy distance of the river, and stream driving does not exceed a distance of more than six miles.

For further information apply to

E. A. SMITH,
23t.f. Shediac, N. B.

For Sale

Planing Mill on Canadian National Railway Lines, between Levis and Mont Joli, doing a Milling In Transit business, working night and day, with work ahead, guaranteed for several months at profitable prices. Fully equipped with planer, sticker, ripper, re-saw; handling several cars daily, with siding capacity of five cars, which is shortly to be extended to nine cars capacity; right in the heart of lumber section where more than ten times mill's capacity has been refused due to over-taxing of mill. Mill built of cement with cement floor, with additional buildings for Sash and Door Factory or Box Factory attached, and sheds for piling, also with piling ground for around half of million feet of lumber. Sellers will guarantee work several weeks ahead. Price $30,000.00, on terms that will be satisfactory. A live man or group of men can easily clean up $20,000.00 a year net profit, and mill can be extended for increased business very easily up to ten cars per day. Principals only. If interested write to Box 430, Canada Lumberman, Toronto, Ont. 24-4

Saw Mill For Sale By Tender

Tenders will be received by the undersigned to Jan. 31st, 1921, for that valuable saw mill and five acres of land, with cookery, sleep camp, stables, and several hundred feet of railway siding, situated at the Mississauga River, in that splendid Timber District on the Soo line of the C.P.R. between Blind River and Dean Lake, Ontario, the property of the Empire Timber Lumber & Tie Co., Ltd. This is one of the best lumbering locations on the North Shore.

This property is subject to a mortgage of Thirty-Five Hundred Dollars ($3,500) payable in four instalments due February, July, December, 1921, and May, 1922.

Enough timber such as Birch and soft woods can be obtained nearby to keep this mill running for years to come. It is fully equipped (steam) and in good condition and has a capacity of 15 M to 20 M feet per day.

Terms: Reasonable cash payment would be hequired and terms to suit could be arranged for balance. The highest or any tender not necessarily accepted.

J. S. Stewart, Suite 408 Tyrrel Bldg., 95 King St. East, Toronto, Ont. 2

Miscellaneous

Sealed Tenders addressed to the undersigned and marked on the face of the envelope "Tender for Metagami Timber" will be received up till noon of Wednesday, January 19, 1921, for the merchantable timber of the pine, spruce, tamarac and cedar species growing on the Metagami Indian Reserve in the district of Sudbury province of Ontario.

Tenders should state the amount of cash bonus they are prepared to pay for this timber over and above dues payable under sworn returns furnished by a licensed culler of the timber cut each season.

The tariff of dues is as follows:—

Pine, $2.50 per M. f.b.m. or $25 per M. cu. ft.

Spruce, $1.25 per M.f.b.m. or $12 per M. cu. ft.

Tamarac and Cedar, $1.50 per M. f.b.m. or $15 per M. cu. ft.

All logs over 18 feet in length to be scaled under the cubic-foot standard and if the timber is taken out in the form of ties, poles, posts, etc., the tariff covering these wood goods may be had on application.

An accepted cheque on any Canadian chartered bank for ten per cent. of the amount of bonus tendered and made payable to the order of the undersigned should accompany each tender, which in the event of failure to carry out the undertaking will be forfeited to the Department.

Forty per cent. of the amount of bonus tendered must be paid within thirty days from the date of notification of acceptance of tender, and the balance or fifty per cent. must be paid within one year from said date and will be subject to interest at the rate of six per cent.

An annual license will be granted to the successful tenderer and the timber must be cut and removed under the regulations of the Department. Ten years will be allowed in which the timber must be cut and removed.

Any further information that is desired, together with plan of the Reserve and copy of the regulations may be obtained from the undersigned or from Mr. T. J. Godfrey, Indian Agent, Chapleau, Ont

DUNCAN C, SCOTT,
Deputy Superintendent General of Indian Affairs

Ottawa, December 9, 1920. 1-2

ONTARIO

Sale of Timber

Tenders will be received by the undersigned up to and including Thursday, the 20th day of January next, for the right to cut the timber on Berth G.49, lying southeast of the MacAulay Lake in the District of Rainy River.

For conditions of sale and further particulars apply to Mr. W. M. Jones, Crown Timber Agent, Fort Frances, Ontario.

BENIAH BOWMAN,
Minister of Lands and Forests.

Toronto, December 14th, 1920. 1-2

Wood in Freight Car Construction.

The fact that over two billion feet of lumber and timber are used annually in the United States for the maintenance of freight car equipment and for the construction of new cars, representing an annual outlay for material alone of over $5,000,000, is ample evidence of the importance of wood in this big industry, says Mr. H. S. Sackett, Asst. Purchasing Agent of the Chicago, Milwaukee & St. Paul Railway Company, in an address this week in New York city before the American Society of Mechanical Engineers.

Statistics gathered by operating officials of some of the larger railway systems seem to indicate, says Mr. Sackett, that the cost of maintaining steel gondola cars over a period of years is greater than for composite (wooden and steel) cars of the same type. The data collected show that all-steel gondola cars in their 12 years of service cost over 36% more to maintain than did the composite gondola. The initial cost of the composite gondola car is less than the all-steel gondola, and the sides of the composite car do not bulge as do those of the steel car. Another advantage of the composite type is that certain properties in coal cause corrosion to steel, and wood is not affected by them.

In the case of closed-top cars, such as stock, box and furniture cars, under present railroading conditions, the understructure should be of steel, says Mr. Sackett, and the superstructure of wood. All steel cars are too heavy to be popular; in fact, no material yet discovered combines the properties of strength, lightness, availability and ease of working, such as are possessed by wood.

It is also rather curious that the salvage value of wooden cars is greater than that of steel cars. The wooden car may be quickly and easily repaired while the steel car is rehabilitated only at a high cost, or is scrapped.

Marketing Lumber in the Old Days.

In 1879 and thereabouts the marketing of lumber was conducted in a very different way from what it is to-day, said Mr. Edward Hines in a recent address before the National Association of Purchasing Agents in Chicago. Mr. Hines speaks from personal experience, having been employed in 1879 in the lumber market of the city, and he recalls having seen in one day at that time as many as 135 vessel loaded with lumber, tied along the Chicago River, awaiting buyers.

In those days the lumber was not stored and sorted into grades, lengths, widths, etc., ready for immediate consumption and marketed direct from the mill to the retail dealer and consumer, as it is now, but was manufactured all sizes and grades and thus shipped green from the saw on what were known as lumber schooners. Later small steam schooners were used, carrying from 150,000 to 350,000 feet and even 1,000,000 feet. This lumber was transported from various lake points to Chicago and was there placed in the hands of commission men to be practically auctioned off by them to the highest bidder from the various lumber yard dealers located along the river. These dealers at one time numbered nearly one hundred.

When a trade for the shipment was made, local inspectors were put upon the cargo to measure the lumber as it was unloaded over the side of the boat on to the dock and later the proceeds were sent to the mill man, less commission for the sale.

Compare this old-fashioned method of marketing, says Mr. Hines, with the present up-to-date methods of piling and sorting everything at the mill into grades, widths, lengths, etc., and marketing direct to a definite buyer.

Timber Situation in Great Britain

Timber is arriving from overseas in Great Britain in greater quantities than can be immediately absorbed, according to the United States Consul at London. The situation, he says, will remain unsettled as long as imports continue to arrive without an immediate market. Financial stringency is undoubtedly at the root of the unsettled situation, for the country's need of timber is greater than the supply. High prices of wood, heavy taxation, and general difficulties of transit and trading are also hindering commercial enterprise. There is a great slump at present in the furniture trade, due to high cost of timber, advancing wages and frequency of strikes. Casemakers and plywood merchants are doing but small trade. A fair demand however exists for all house-building sizes and for laths. Saw-mill men are well supplied with work in connection with house-building requirements.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

R. R. BRADLEY
4 Hospital Street,
MONTREAL, P.Q.

MODERN MARINE MACHINERY
Automatic Steam Towing Machines, Ship Windlasses, Cargo and Deck Winches, Steam Capstans, Dock Gypsies, Steering Engines, Hydraulic Freight Hoists, etc.
Manufactured by
The Corbet Foundry and Machine Co. Limited, Owen Sound, Canada.

LOG STAMPS

Superior Mfg. Co., Ltd.
93 Church St., Toronto

RAILS
New and Relaying also Frogs, Switches, Spikes, Etc. All sizes in stock. Also used
Locomotives, Logging, Box and Flat Cars, Hoisting Engines, Chain, Wire, Rope, etc.
R. T. GILMAN & CO.
MONTREAL, QUE.

Review of Current Trade Conditions

Ontario

The general lumber market continues quiet and business for the most part is confined to sorting up and a few mixed carloads. There are, of course, many inquiries being received and a number of wholesalers report that the outlook is better for increased trade, but no particular revival is expected until March.

In the meantime the attitude of both buyer and seller is an expectant one. Some price-cutting is still going on and there is a disposition on the part of wholesalers and manufacturers to take less for the lumber than they were willing to accept a few months ago. The cuts, however, outside of hemlock and jack pine, have not been very heavy, and it is doubtful if the stock could be replaced at some of the quotations which are prevailing just now.

Producing costs are not likely to be as high next year, however, owing to greater efficiency on the part of men in the bush, a less nomadic spirit among lumberjacks and a general cut in wages which, in many instances, have been reduced 30 per cent to 50 per cent., and in most cases has been accepted. The reason, that bushmen have agreed to the cut, is due to the large number of men available and the fact that it has been recognized that $70 to $80 and $85 a month has been an abnormal figure. Even the men who received it, knew they were practically holding up the firm, especially if they were not rendering an adequate return. Flour, sugar and other supplies have also come down and it is not costing as much to board the men which, at the beginning of the season, ran as high as $1.15 to $1.25 a day. Oats are down in price and hay is about the same as a few months ago, but considerably higher than last year.

Some operators report that they are getting a greater output in four or five camps, well manned and aggressive, than they did last year with practically double the number. It is also reported that the men on the drives will not receive as much this spring, and there is likely to be a cut in the schedule for unskilled labor around the yard and mills, so that on the whole lumber will possibly be turned out somewhat less per M. than a year ago. Some have not yet reduced the prices on their high cost lumber but, it is said, a number will do so during next month in an effort to lighten up the load which they have been carrying.

While 1921 may not be any great money-making or epochal period owing to the process of readjustment and economic equalization it should, on the whole, prove to be a fair business year. All kinds of opinions are being offered regarding the future, so far as prices, production, demand, industry, buying, etc., are concerned, but those who take the middle course, believe that lumber will not be sold at the mills any cheaper than it is now and that as the summer months pass, there will be a gradual strengthening in values.

The recent reduction of 5 per cent. in freight rates is very small and practically amounts to only a cent or two a hundred on certain hauls. For instance, the rate from Vancouver to Toronto, under the 40 per cent. increase granted some months ago, was $1.05. To-day, with the 5 per cent reduction—and this means 5 per cent. of the 40 per cent. advance and not 5 per cent of 100 per cent., as many suppose—the levy is $1,03½. From many other points the reduction is even less. Much depends upon the route, competition, etc.

It is generally conceded that lumber prices will not be any lower than they are just now and business from this out is bound to improve. The worst of the depression has evidently been passed and the prospects for building operations and industrial activity grow brighter with each succeeding day.

A leading Ontario wholesaler, who returned from the West recently, stating that the hardest blow the lumber industry had received in years was the abnormal jump in freight rates. It was the straw which broke the camel's back, so far as the demand for forest products was concerned, and came at a most inopportune time, being an additional burden on the consumer just when values in other commodities were descending. He said the railways are recognizing this now and thought that they would, on certain hauls, particularly from the coast, make a reduction on cars that formerly returned from the coast, laden with lumber are idle now. Shipments of lumber are so few and scattered that as much business is not done in a month as was done in a single week before most B.C. mills had closed down. Owing to the high cost of production and the small purchases made, operators are content to mark time until there is a change in the general situation, which will justify resumption of activities in their big plants.

In hardwoods the demand is limited, and it is usually about this time that wholesalers are looking around for stocks, seeing what is being offered and making their plans and purchases for the coming season. Last year at this particular period there was a great scurrying for supplies on the part of the wholesaler. This year it is the manufacturers who are doing the looking around and the wholesalers are resting on their oars, content to let the other fellow take the risk and assume the burden. There is reported to be quite a shortage in good ends of thick stock, 1 in. and 2 in. birch, maple and elm. Oak is weakening and hardwood flooring dropping in price.

A wholesaler stated lately that during the past month if it was known that any firm was in the market for two or three cars of lumber, everybody was bidding for it, with the result that there was no stability in prices and the market was being upset to an unprecedented degree. A year ago, if it was known that a wholesaler or manufacturer had a few cars for sale, particularly in hardwoods, the bidding was all on the other side; consumers were clamoring and making offers that caused speculation to become rife and inflation to know no limits. Reaction was bound to come, and the sooner stabilized values are in evidence and the abnormal and fictitious give way to the genuine and the substantial, the better it will be for all concerned in the lumber line.

United States

With the opening of the new year all eyes are turned to the future in the lumber arena but it is too early yet to gauge the situation regarding what the coming months will bring forth. The whole attitude of the trade is well summed up in the remarks of a leading exponent who states that he is optimistic about the future of the lumber business and looks for better conditions in the spring. There is a necessity for more houses to be built everywhere and the demand for general forest products is expected to increase in the near future. While chary of making predictions, all members of big firms are expecting the best. It is believed that the end of the readjustment period is in sight and that a period of good business lies immediately ahead. The lumber industry is not down cast nor has it lost hope, according to reports received from various centres, the new year will be a Nineteen Plenty one, is the novel way in which one firm expresses its opinions regarding the future.

In regard to the hardwood situation the market is quiet, F A S and clear hardwoods are in somewhat greater demand than the lower grades and naturally the prices have remained firmer. In the south and east, production is at a low ebb and trading is not heavy. In some cases stocks are badly broken for assortment. The tone of the market is considered better than a short time ago. No increase in demand is expected for the immediate future. On the contrary, it is generally admitted that, with the inventorying period just ahead, continued quiet will be the rule, at least until the middle of January. After that time, it is generally felt that there will be some revival of buying but some members of the trade are disposed to believe that the first several months of 1921 will probably be rather slow. In th meantime, it is certain that very little hardwood lumber will be produced before spring. Orders are generally for one or two cars. indicating that consuming interests are buying only to meet pressing requirements. The exchange situation is so adverse that, although there are more inquiries from European sources, there is little actual business in immediate prospect. Stocks are somewhat below normal.

Predictions have been made from time to time that production at the end of 1920 would be a basis of 10 to 15 per cent. of normal. Some members of the trade here believe that output at present is slightly above these figures but even the most liberal authorities concede that hardwood output is not more than 20 percent of normal for this time of year. Logging operations are suspended throughout the southern field, with remarkably few exceptions, and it is pointed out that, with bad weather at hand and with so little incentive to manufacture more lumber, it will be impossible to increase output substantially even if conditions become sufficiently favorable to justify this course. Some members of the trade hold that there will be even greater curtailment during the first few months of 1921 than has been witnessed up to this time.

There have been some price recessions in hemlock quotations, especially in the lower grades and buying has been light. In southern pine, production is at a low mark. Many mills have shut down and will not resume operations until there is a radical change in conditions. It is felt by some that 1921 is going to be a reasonably good year. Stocks at the mills have been increasing and, should buying be resumed on a large scale, there is quite a reservoir of lumber to draw

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

from and it is not thought there would be a soaring market such as existed some months ago.

In an excellent and thoughtful article by Dr. Wilson Compton, the manager of the National Lumber Manufacturers Association of the United States, on "Where does the lumber industry stand and when is business likely to pick up," he says in part, after carefully analyzing existing conditions: Everything points to a further accumulation of unsold stocks at the mills for the next three months; a further reduction in unfilled orders until April, 1921; a low level of lumber production for the next three or four months; a revival of active demand beginning about April, 1921, following the expected rebound of business generally from its present condition of depression.

When financial and general business conditions are such as to permit it, the demand for lumber and for many other building materials should be proportionately greater than for any other single group of commodities, because of the greater underlying and as yet unsatisfied need for construction. The lumber industry may perhaps be subjected to the same conditions of demand with which it was confronted in 1919. It will then, however, be much better able to meet this demand because of larger available stocks and probably more favorable conditions of production.

An analysis of the fundamental conditions does not indicate any likelihood of substantial increase in the movement of lumber or in the demand for lumber during the next three months; but thereafter a substantial revival of demand, upon a fundamentally sound economic basis may be expected with considerable confidence.

Great Britain

Trade during the past two or three weeks has been quiet owing to the holiday period and what will develop during the coming months cannot as yet be outlined with any degree of accuracy. Much attention is being devoted to the policy which should be pursued and it is agreed that business would be much more satisfactory with prices on a basis below the average of the past year.

Speaking along this line the Timber Trades Journal in a recent issue says: That in the long run present prices cannot be indefinitely maintained need not be argued; values have been forced up to an artificial level in the aftermath of the war.

Under certain conditions we might have another season of erratic markets, high values at first, while buyers struggled among themselves to get the pick of the productions, followed by a decline, with its inevitable losses when it was found that the consumption could not be maintained. Without imputing any but business motives to the exporters, it seems as if a great effort would be made to keep up free-on-board values, but the future rests much with buyers in Great Britain.

Despite the general monetary stringency in Sweden and Finland, the leading exporters in these countries appear to be in a fairly strong position, and so far they maintain that there will not be the slightest necessity to sell at anything less than this year's prices; they state that they are only making a reasonable profit at these figures, and that importers who want their goods must pay. We do not anticipate that any firms in England will be so speculative as to make purchases just yet, but the keenness always displayed to secure the best markets may prove a very severe stumbling block in the path of those who see the necessity of establishing a lower level of f.o.b. values.

In regard to imports of forest products a leading firm states that the past month the quantities were moderate but that business generally was dull and unsatisfactory. In the aggregate stocks are slightly reduced and that holdings are full in practically all varieties. It is urged that shippers should exercise caution in consigning, and, while the industrial position appears more stabilized, there are unsettling factors yet to be taken into account. In regard to Canadian woods so far as white pine from Quebec is concerned, Farnsworth and Jardine state that there was a small import, chiefly to Manchester. Deliveries were restricted. Stocks are heavy, and mostly in the hands of merchants. Waney Pine (First Class): The deliveries exceeded the import, but stocks are still high. The outlook is still restricted. (Second Class): Practically uncalled for. Square Pine, Red Pine: No enquiries. Oak: Manchester received the import, viz., 17,000 cubic feet, which came in on Manchester account. Deliveries were small, leaving stocks fairly substantial. Elm: Nominal import and consumption. Stocks, however, are not heavy. Large-sized, fresh square wood is asked for. Pine Deals: There was a substantial arrival list, and with deliveries failing to keep pace the stocks are increased. The demand continues fairly steady, and prices were well maintained. Spruce: About 1,200 standards arrived, of which only about 410 standards went into consumption. Present stock of 11,040 standards is heavy, but little change in value.

The import to the Mersey of New Brunswick and Nova Scotia spruce and pine deals shows a total of 7,202 standards. of which about 5,450 standards went into consumption. Stocks are consequently increased, now reaching the very heavy figure of 39,340 standards, fairly evenly distributed between Liverpool and Manchester. The demand was disappointing throughout the month, sales difficult to effect, and values fluctuated. With present heavy stocks little or no business for forward delivery was completed. A number of consignments by liners were offering, and a few forced sales made at lower prices, balance stores for shippers' account. Consignments should be discouraged for the present. Pine Deals: Import nominal, with a fair demand for the better shipments. Stocks are moderate.

The arrival of birch logs amount to 25,000 cubic feet to Manchester, all one contract. The consumption was disappointing. Stocks are moderate. Only wood in good condition and attractive size is enquired for. Planks: The import was small, and only exceeded by the deliveries. Stocks are heavy and more than sufficient to meet the limited quiet demand. Values are unsteady.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Better Feeling Prevailing in Montreal Circles

Although business in Montreal continues to be slow, there is a decidedly better feeling in the market. The great majority of wholesalers express confidence that a turn for the better is not far off, and that there will be a bracing up of the demand. On the whole, 1920 was a good year, although the latter part was a disappointment to many firms, who had expected that prices would hold until this year. The break came almost suddenly and upset the calculations of a majority of wholesalers.

Preparations are now being made for the next building season. There are reports of many projects being prepared. Prices of several materials have already come down, and it may be expected that others will follow. Labour costs too will probably drop a little, despite the already expressed hostility of the unions to any cut in wages. It looks, therefore, as if building will be cheaper, and if this materializes there is almost certain to be an increase in construction. Of the need of more houses there can be no doubt—the great barrier to the work has been the heavy cost. The building permits for last month totalled $672,900, an increase of $14,499.

The inactivity in the lumber market applies to every department. It is not a question of price, but of disinclination on the part of the retail yards and of large consumers to buy.

During November last, pulpwood to the extent of 137,090 cords, valued at $1,948,241, was exported to the United States, an increase of 60,098 cords and $1,312,880 as compared with November, 1919. Exports of pulpwood for the eight months amounted to 915,336 cords, valued at $6,321,540, in the corresponding months of 1919 and 1,132,987, valued at $10,846,864 in 1918, all of which went to the United States. In November, pulp and paper exports advanced over 1919 by $6,338,445, of which paper secured $2,985,951, chemical pulp $3,333,718 and mechanical pulp $18,776. For the eight months the total was $118,303,918, a gain of $53,677,378, made up of an increase of $21,065,809 in paper, $24,527,882 in chemical pulp, and $8,082,687 in mechanical pulp.

The Lumber Market in Quebec is Very Quiet

The lumber market in the district of Quebec at the beginning of the new year has shown no signs of improvement and with little prospect of a change for the better in the near future. In consequence very little manufacturing is going on in comparison to the past few years and the curtailment in operations in the woods, has brought about a drastic drop in wages. The scarcity of labor that existed for some years past, has so eased that the trade is no longer troubled in this respect. In the meantime there have been very few logs cut in the woods or only enough to keep together the organizations of the big interests.

Quebec exporters interviewed in regard to the outlook for business next season, are not very optimistic, pointing to the political

Galbaduk
TRADE MARK

The Standard Water and Mildew Proof Fabric for Horse Covers, Tarpaulins, Etc.

Galbaduk is entirely manufactured in our own factories, both the cotton canvas and the waterproofing process, from the cotton fields through our plant to the consumer.

Absolutely water and mildew proof and cheaper than any other waterproofed duck or canvas on the market today.

Suitable for covering all kinds of building materials, cement, sand, lumber, motors, machinery, boat hatches, hay stacks, new sidewalks.

horizon in Europe and the unsettled condition of the world in general. Nevertheless, they are not altogether pessimistic and say they hope for a change and expect to be in a better position to judge in the month of March next when the cable advices will be arriving from the United Kingdom.

In the meantime one old Quebec firm, Dobell, Beckett & Co., have decided to go out of business. The news came as a great surprise to the trade in this city as the firm was besides being one of the oldest, one of the most reliable and doing a fine business.

The Quebec Government have under consideration a public bill dealing with legislation of charges in the Departments of Lands and Forests and Colonization Mines and Fisheries in connection with the administration in the regulations in the sale of timber limits, that will have important bearings on the timber limits of the Province of Quebec. On making inquiries at the Department of Lands and Forests, the "Canada Lumberman" was informed that the proposed legislation will in no way discriminate against the timber and lumber interests. In the past the Department of Colonization sold all lots to settlers on lands, and this conflicted to a large extent with the Department of Lands and Forests for the reason that, when the farmer sold lots it was without consultation with the latter department and, very often the Department of Lands and Forests had auctioned off timber limits, later to discover that the Department of Colonization had privately disposed of parcels of the land to settlers. This happened recently in the Abitibi district; consequently the Government came to the conclusion to draw a more definite line in the function of these two departments to obviate the chance of confusion and possible conflict in their public transactions.

The proposed bill provides that all land, wooded or otherwise, set apart for disposal to settlers, will come under the control of Department of Colonization, while the timber limits on Crown lands will be under the sole direction of the Department of Lands and Forests. The full text of the new bill has not as yet been drafted, inasmuch as there are considerable details under consideration to be approved.

Another essential section of the new bill to be legislated is the disposition of the Mines and Fisheries now under control of the Department of Colonization, which may be transferred to the Department of Lands and Forests. The Quebec Limit Holders' Association is very much concerned in the new bill, and the Government, with a view to making it as fair as possible to all concerned, have invited the Association to appoint a committee of five of its members to work with the departmental officers in the drafting of the bill, who now are giving their time and attention to the work. One of the evils to be guarded against in protecting the interests of the limit holders as well as the Government, is the influence of the rural members of the Legislation and the dishonest speculator under the guise of new settlers.

It has now come to pass that the greater part of freehold limits in the province have been almost fully exploited from which timber and pulpwood could be cut and exported to anywhere without Government interference. This situation of affairs naturally will engender a desire on the part of illegitimate new settlers to make a raid on Crown Lands and timber limits owned by private owners, who have already suffered to a very great extent by such inroads into their purchased rights.

The trade and limit holders will therefore observe that too much care cannot be taken in the drafting of the new bill to guard against the violation of vested rights. The government has been consulted in regard to a careful protection of the limit holder and has promised to do so. But the danger to be guarded against when the bill is before the public 'bills' committee and the legislation in session is the possible demand by members from the rural constituencies who may seek amendments, that so many thousand acres of Crown lands be allotted to each municipality for new settlers. Settlers or speculators, who may pay 30c per acre, after clearing the land of its timber at a large profit, may obtain a couple of crops of hay from the property without nourishing it, and then abandon the land. This has happened time and again and the Limit Holders' Association cannot be too careful in watching the legislation of the bill.

Conditions in Ottawa Trade Remain Unchanged

Conditions in the Ottawa lumber market during the first part of 1921 showed little or no change as compaared with the last two weeks of the old year. Orders and inquiries remained slow, and the most hopeful feature of the market, was the keeping up of prices and the occasional report from a dealer, that business showed a tendency toward picking up.

On the whole business for the first two weeks of the new year was slower than for a corresponding period in former years, but in face of all the depression, there was here and there a hopeful sign or note that indicated business would pick up. Whether optimism or speculation was behind the reports was hard to tell, but on the face of them, they did not seem justified in fact, by the events of the first two weeks of January.

At Ottawa the principal woodworking factories, or at least their sash and door departments remained closed, the probability was that they would not re-open until sometime in February. "God knows when we will open. It will not be until we land an order big enough to justify our plant reopening" was the comment of one of the heads of the principal woodworking factories, now closed down, to the correspondent of the "Canada Lumberman."

The one hopeful sign of the whole market, as before stated, was the continued holding firm of prices; white pine particularly. Dry pine stocks from what one can hear, are none too large to meet prospective requirements, and this perhaps accounts for the continuation of firmness in this grade.

That a drop in the price of lumber is coming in the Ottawa market, was conceded, by wholesalers and manufacturers, and signs of its approach became more manifest. One instance was the slashing of the wages of woods labor on January 1st from seventy to seventy-five dollars per month with board, to fifty and sixty dollars per month, and intimations were made that wages would show a further drop for newly employed hands.

The way the woods labor situation works out is this. Old camp employees who were employed say last September , say at $75 per month, and have stuck to their camp, and carry on until the bush operations cease, will get $75 and board per month. Those who "went in" in September and broke camp, say around the first of the year, will be paid off at sixty-five dollars or less.

Those who were employed around the first of the year were brought in at sixty-five dollars and if they stay until the end of the season they will receive this amount. If they go out before the end of the operations they will be paid off at the lower wage of fifty-five dollars.

Generally reports for the first two months of the year were that stocks while not large were adequate to meet any prospective demand. The domestic demand, it was reported in some quarters, increased, though not in very great volume. "We are taking orders for anything we have or can get. Everything from mill culls to good lumber. Outside orders are chiefly for mill run grades" was the summary one leading lumberman gave the whole market.

Log cut of the Ottawa Valley this year will only be about sixty per cent. of a normal cut as gauged by the standard of pre-war years. Lumbermen asserted in reply to criticisms that had been heard of their action in dropping the price of woods wages, that labor had only itself to blame.

"Last September every operator in the Ottawa Valley was in a competitive mood and was willing to establish more camps and get out a greater production than last year. Labor threw us down. Woodsmen working in the cities were either fascinated by the living conditions, or were lured by higher pay to stick to jobs they already occupied or thought with a labor shortage woods wages would go higher. The men fooled themselves. Without men we could not put in the camps we intended and in several cases we could not operate the camps we had put in. Consequently there was nothing to do, but curtail operations. The men began to pour in, but it was too late. We could not begin to open up camps and stock them at the end of October or the beginning of November" was the defence put up by the head of one of the bigger operating companies in the Ottawa Valley.

In addition to the "fat chewing" about the drop in wages, there were further "howls" heard about men going out of the bush at Christmas who were on the higher wage scale and before leaving being informed that if they cared to come back they would have to do so at the lowered rate.

EDGINGS

A. C. Landry, lumberman and general storekeeper, of Mont Joli, Que., passed away recently.

The Brompton Pulp & Paper Company, Limited, East Angus, P.Q., have adopted for their trademark "The Bull Dog."

The Dominion Lumber Company, of Boston and Sydney, N.S., capital $100,000, has been granted a Massachusetts charter.

Price Brothers have the "Saguenay Crown" as a trademark; the Belgo Canadian Company, the "Lion"; the Laurentide Company, the "Moose Head."

Building permits involving expenditures of $1,277,277 were issued by City Building Inspector Barnes, of Victoria, B.C., during 1920, as against $526,141 in 1919.

Macamic Pulp & Lumber Company, whose headquarters are at Macamic, Abitibi County, Que., are contemplating erecting a sawmill at Bell River in Pontiac County.

Among the recent installations of the Yates H-6 Horizontal Rand Resaws are Austin & Nicholson for their new mill at Dalton, Ont., and Mr. A. B. Gordon for his mill at Callander, Ont.

Messrs. Boisse & Racicot, wholesale lumber dealers, Sherbrooke, P.Q., are contemplating buying a tract of land near Sherbrooke. It is their intention to erect a mill on this site early next year.

The 31st annual convention of the Western Retail Lumbermen's Association will be held at the Fort Garry Hotel, Winnipeg, on January 26, 27 and 28, 1921. This will be known as the "Readjustment Convention."

Reorganization of the Warren Axe & Tool Co. has been announced, and T. J. Dillon of Welland, Ont., has been made vice-president. Welland and New York interests have united in the reorganization of the Pennsylvania firm.

The Miller Brothers Company, Limited, Montreal, were recently granted a federal charter of incorporation to manufacture and deal in boxboard, wood pulp and other paper boards. Capital $1,000,000. R. T. Heneker and H. N. Chauvin, King's Counsels, both of Montreal, are two of the incorporators.

Dominion Lumber Company, Limited, Quebec, have been incorporated under provincial charter to conduct a general lumber business, manufacturing and deal in lumber and other forest products. Capital $20,000. M. L. Beaulieu, and J. M. Bernier, both of Quebec, are two of the incorporators.

A. C. Reesor of Locust Hill, Ont., one of the enthusiastic members of the Ontario Retail Lumber Dealers' Association, passed away recently at his home in Locust Hill after an illness of some months. Mr. Reesor had been in the lumber business in Locust Hill for fifteen years. He will be very much missed.

The building record for Sarnia in 1920 was more than $100,000 greater than for 1919, according to City Building Inspector Harry Walton. Last year's total was $742,265. The 1919 total was $641,956. Five hundred and seventy-two permits were issued during 1920, compared with 424 for the previous year.

Caught under a falling tree, which men in his employ had been cutting down, Ernest Whitman, a lumberman of Lawrencetown, N.S., was crushed to death in the woods back of that place. Whitman's only brother was killed in the woods in a somewhat similar manner 34 years ago, when a lumber pile fell on him.

Kitchener's building permits for 1920 show an increase of $61,560 over those of 1919. During the past year buildings to the value of $1,238,002 have been erected in the city, while in 1919 the total was $1,176,662. Last year permits included 109 residences, 24 business buildings and an unusually large number of garages.

Manitowoc Shipbuilding Corporation, a corporation in the state of Wisconsin, has been granted an extra provincial license to carry on business in Ontario and to build, purchase, sell, operate and repair ships, barges, dredges and vessels of all kinds. The company is authorized to spend the sum of $40,000 in the province.

In a fire which completely destroyed the lumber camp of R. L. Dibble, near Smithfield, N. B., a little boy, the son of Mr. and Mrs. James Clements, of Shediac, N.B., camp cooks, was burned to death, and three men who tried to rescue the lad, suffered more or less, serious burns. All the buildings in the camp were burned to the ground.

A provincial charter has been granted to Pannill Door Company, Limited, Toronto, with a capital stock of $60,000. The company will take over the business of the Pannill Door Company and is empowered to manufacture, retail and deal in doors and sashes as well as conduct the business of general woodworkers, contractors and lumber merchants.

Reports received from the northern part of the province of Quebec, where Detective George Roy is carrying on a campaign against bootlegging and the selling of adulterated liquors for some of the large lumber corporations, are to the effect that within the last ten days he has arrested 25 law-breakers on various charges connected with the temperance laws.

No decision has as yet been arrived at by the Provincial Government of British Columbia, relative to representations made by many timber license holders for an extension of time within which to meet their arrears of license fees on holdings in the province. All timber license fees must be paid up by the end of 1920 or the licenses will revert to the Crown.

The Peninsula Lumber Company, Quebec, were recently granted a provincial charter of incorporation to conduct a general lumber business manufacturing and dealing in logs, pulpwood and other forest products. Capital $650,000. Sir Keith William Price, Guilford, Surrey, England and H. A. Colvin, Kingston, Ont., are among the incorporators.

The Dominion Government is following the example of the Provincial Government, and has started to wage war on its timber thieves. From the abandoned barracks at the Long Branch Rifle Ranges, near Port Credit, Ont.,

some $6,000 worth of new lumber has been stolen within the lasts three or four months. Three of the alleged thieves were arrested recently.

Work on the fibre board plant the first unit of which will cost a quarter of a million dollars will be commenced in Midland early in the spring if the ratepayers decide to give Manley Chew a fixed assessment of $25,000 for ten years. Mason & Co. of Manchester, Eng., to whom Mr. Chew sold his sawmills and limits a few months ago, are applying for an extension of the fixed assessment of $25,000 on the Midland purchases for eight years.

The Bentley timber limits and mill at St. Martins, N.B., was taken over recently by the Pejepscott Paper Company from A. F. Bentley & Son, Limited, and A. F. Bentley, ex-M.P.P. All the Bentley holdings in the eastern section of St. John county, with the exception of their general store, are reported included in the transfer. The deal involved the exchange of a large sum of money.

According to information given out by an official of the Department of Lands and Forests in Quebec, there has been a decrease of twenty-five per cent. in the production of lumber in the course of the present year. The drop is attributed to conservation and also the attempt on the part of the lumbermen to reduce the price of labor, which has already greatly decreased since last year.

F. Villeneuve, retail lumber dealer, of Walkerville, Ont., is erecting an attractive and commodious new office building. The downstairs portion will be devoted to business quarters, while upstairs there is ample space for storing his stock of doors. There is a driveway on both sides of the building. Mr. Villeneuve also intends erecting a new shed about 100 feet long, which will be equipped with all the latest facilities for housing his dressed lumber.

The employees of the pulp and paper companies of Montreal have formed a hockey league. Those comprising the league are the Riordon Pulp & Paper Company, McFarlane Sons & Hodgson, Abitibi Pulp & Paper Company, Howard Paper Mills, C. F. Dawson Company, and Canadian Export Paper Company. The officers are: Honorary patrons, C. Howard Smith, C. H. McFarlane, Charles F. Dawson, Carl Riordon, F. H. Anson and C. F. Steel; President, W. H. Aird; Vice-president, Allan Davis; secretary-treasurer, P. M. Fox.

The plant of the Riordon Pulp & Paper Co. of Merritton, Ont., has closed for an indefinite period. This was one of the first sulphite pulp mills established in Canada, and the output is about 30 tons a day. Only what staff is absolutely necessary is being kept on at the work. Several hundred men are temporarily out of employment owing to the comparative quietness in the sulphite market. There is a large stock on hand of the bleached product. Until demand reasserts itself, it is not likely that the Riordon plant at Merritton will resume operations.

The ratepayers of Midland, Ont., at the recent civic elections, carried a by-law to grant $25,000, fixed assessment to Mason & Co., who some time ago acquired by purchase the sawmills and large lumbering interests of Manley Chew, and will expend a large sum in extensions to the plant and facilities. Another by-law was also carried to grant exemption of taxation for a term of years to Manley Chew for the construction of a fibreboard plant, the first unit of which is to cost $250,000.

A charter has been granted to the Arbuthnot Lumber Company, Limited, with head office at 272 Princess St., Winnipeg, and a capital stock of $300,000, to acquire the business and assets of the John Arbuthnot Company, Limited, and to buy, sell and deal in lumber and building material, as well as carry on the production of timber, pulp, wood, and other allied lines, including logging operations and the building of dams, piers, docks, etc. The incorporators of the company are Frederick MacKichen, James Weir, John Meder and Thos. S. Minton, all of Winnipeg.

C. S. Battle, of Vancouver, who is a prominent lumberman, says that American engineers, representing the financial interests of Chicago, New York and Buffalo, are investigating the pulp-producing possibilities of British Columbia with the object of investing from $8,000,0000 to $10,000,000 in the industry. The investment will represent the taking over of the plant of the Beaver Cove Lumber & Pulp Company, together with other holdings of the company and the White Bros., of Boyne City, Mich., which, in the aggregate, total 5,000,000,000 feet of the finest stumpage in the Pacific Coast province.

E. W. Backus of the Fort Frances Pulp & Paper Company, Fort Frances, has been attacked several times by the Toronto Telegram, which has been publishing somewhat sensational articles under the heading "Province will lose Twenty-five Million or More by Drury-Backus Timber Limit Deal." "Biggest Scandal in the History of the Province." "Give American Millionaire Vast English River Area at Practically His Own Price," etc. Mr. Backus has taken exception to the nature of these articles in reference to the English River timber limits and has entered action for $100,000 damage against the publishers of the paper.

Head of the school of chemistry at Washington University and author of several books on wood distillation, Dr. H. K. Benson was a visitor recently in New Westminster, B.C., being the guest of Mr. Phillips A. Carleton of the Acetate Products, Limited. Dr. Benson, who was delegated by the United States government in 1916 to make a survey of the wood products plants at a time when the republic was planning on entering the war arena in Europe, was very much impressed with the possibilities of wood distillation in this area. While in Vancouver he was shown over the plant taken over by the Acetate Products, where preparations are well under way for construction of retorts.

The Russell Timber Co., of Port Arthur, are not going to allow the Ontario Government to get away with all the charges that have been laid against the company. They claim their business has been held up and that they have otherwise suffered much damage through the action of the attorney-general of the province. The Russell Company seeks to claim and obtain, if necessary, a fiat to counter-claim for $100,000 damages for unjust and wrongful acts of the attorney-general. The company also contend that while they cut several thousand cords of pulpwood, that it was cut through error of their agents and they are willing to have the damages determined by a proper tribunal. The Russell Timber Company also say that the Attorney-general of Ontario has been making use of its claim against them for ulterior purposes and is endeavoring in every way that is possible to proceed harshly against them and continue to attack them for the wrong-doing of other people rather than sueing such other people, who have, by such wrongful action, caused the company much loss and damage, and have also injured their credit.

Canadian Lumbermen at Ottawa

Thirteenth Annual Gathering Greatest Ever Held— Other Meetings That Will Come Off Soon

The Thirteenth Annual Meeting of the Canadian Lumbermen's Association is being held at the Chateau Laurier, Ottawa, as January 15th edition of the "Canada Lumberman" goes to press. The attendance is the largest ever known in the history of the organization and the arrangements made by the reception committee in Ottawa are of a most pleasing and entertaining character.

The affairs of the Canadian Lumbermen's Association were never in better shape than they are to-day, and the reports presented all took a hopeful view of Canadian industrial conditions and an early revival in the lumber trade.

A complete and illustrated report of the proceedings will appear in the February 1st edition of the "Canada Lumberman," and will, no doubt, be read with much interest and appreciation.

The gathering this year was held several weeks earlier than usual, but this did not detract from its enjoyableness or success. The thirteenth annual session was in every way a credit to the great lumber interests of the Dominion.

The annual meeting of the Spanish River Boom Company, for the election of officers and receiving reports, will be held at the Queen's Hotel, Toronto, at 10 o'clock on Wednesday, January 19th. The annual meeting of the Spanish River Improvement Company will also take place at the same time. In the afternoon the Mississauga Boom Company will meet for the election of officers.

The annual meeting of the Lumbermen's Credit Bureau will be held at the Board of Trade Rooms, Toronto, on Friday, January 21st, at 2.30 o'clock for the election of officers and the receiving of reports, etc.

The Forests Conservation Conference of the Forest Productive Organizations of the Province of Quebec composing the Quebec Forest Protective Association will be held in the Ladies Ordinary, Windsor Hotel, Montreal, on Wednesday, January 19, 1921.

The principal subjects will be Forest Protection along the Railways and Wireless Telephony in regard to forests protection.

The woodland section of the Pulp & Paper Association will also hold their meeting on same date and place, and the Canadian Forestry Association will hold their annual meeting on the 20th.

The Retail Lumber Dealers of the Niagara District intend holding a dinner at the Clifton Inn, Niagara Falls, on the afternoon of Saturday, January 22nd, at 2 o'clock. This will be followed by a session for organization purposes, and it is expected there will be a large attendance. The committee in charge of arrangements are Messrs. Shirton of Dunnville, Rice of Welland and Barraclough of Cayuga. Mr. Harriman of Niagara Falls is looking after the local arrangements, and it is expected there will be a large and representative attendance.

The Buyer's Obligation in Lumber Purchase

Mr. Justice Weir, of Montreal, handed down judgment in the Superior Court recently in an action in which Edward M. Nicholson, of Montreal, et al. sued George Kersley for damages for having failed to execute his contract to deliver to plaintiffs from eight to ten thousand birch logs.

The contract was made on March 28, 1919, the logs to be delivered on board railway cars at Ste. Agathe, or Sixteen Island Lake or Montfort "as soon as the roads became passable." Defendant failed to make any delivery and the court held he was liable to plaintiffs for damages which were assessed at $7,930.83, Kersley having failed to prove to the judge's satisfaction that non-delivery resulted from force majeure, namely, bad condition of roads and scarcity of labor owing to the operation at the time of the Military Service Act.

The principal point of the case turned on the measure of damages. Defendant asserted that plaintiffs as buyers were obliged to prove the market price of birch logs at the time of the alleged breach of contract.

Judge Weir, in discussing this question, said that in the case of McGillis vs. Huot (29, S.C., 350-1906), it was held that the measure of damages for non-delivery of goods was ascertained by the difference between the contract price and the market or current price thereof at the time the breach of contract took place. This decision was followed by others which laid down the same principle with the definite addition that the burden of proof to establish the difference in market price rested upon the buyer.

His Lordship regretted to dissent from this opinion. He saw no reason to wander away from the law so clearly laid down in Article 1703, of the Civil Code, which provides that "the damages due to the creditor are in general the amount of the loss that he has sustained and of the profit of which he has been deprived." In the case of Werthein vs. the Chicoutimi Pulp & Paper Company (1911, A.C., 301), Lord Atkinson, speaking for the Privy Council, said: "It is the general intention of the law that in giving damages for breach of contract the party complaining should, so far as it could be done by money, be placed in the same position as he would have been if the contract had been performed."

This was equivalent, Justice Weir went on to point out, to "paying him the loss he has sustained and the profit of which he is deprived," according to the provision of the Code.

Defendant also objected that plaintiffs were not entitled to make proof of purchases made after the entering of the action in order to obtain the goods which defendant had failed to deliver.

Judge Weir ruled against defendant on this point also, and cited as applicable the finding in the case of Findley vs. Howard (58, S.C.R., page 516), to the effect that "in the action for damages for loss of future profits arising out of a wrongful breach of contract, events which happen between the date of the commission of the wrong and the time of the trial must be taken into account in estimating the loss for which the plaintiff is entitled to compensation, and determining what actually was the value of the contract to him at the date of the breach."

Judgment accordingly went against the defendant, who was condemned to pay to plaintiffs $7,930.83, with interest from October 26, 1918, and costs.

Late News Happenings of Interest

A by-law authorizing a fixed assessment of $150,000 for ten years on the operations of McLachlin Bros., Arnprior, was carried by the ratepayers recently. It is understood that McLachlin Bros. are seriously considering the construction of a large concrete dam 400 feet long across the Madawaska River, as well as the installation of an electric power plant. It is probable that later on a pulp mill may be erected.

M. M. Smith of the Dock & Mill Company, North Tonawanda, N.Y., accompanied by his wife and son, spent a few days recently in Toronto, calling upon members of the trade.

H. G. McCleary of Philadelphia, Pa., who represents the Union Lumber Company in that city, spent a few days in Toronto recently on business.

Conkey & Murphy, manufacturers of ties and lumber, Haileybury, Ont., have dissolved partnership and the business will be carried on by Mr. A. T. Murphy.

No decision has as yet been arrived at by the British Columbia government relative to representations made by many timber license holders for an extension of time within which to meet their arrears of license fees on holdings in the province.

All timber license fees must be paid up by the end of the year, or the licenses will revert to the Crown. Many of the holders who have been holding timber limits for years and have paid many thousands in fees are finding it almost impossible to secure money to meet the arrears which have accumulated against their holdings. Just what the total amount of these arrears are at present is not certain, but they will probably aggregate nearly a million.

Hon. T. D. Pattullo, Minister of Lands, said that so far no decision has been reached by the Government as to whether the relief asked for would be granted and, if so, to what extent.

Exporting Pulpwood From Crown Lands

It is charged that the United States companies carrying on lumber operations in York County along the New Brunswick and Maine international boundary, are cutting pulpwood on Crown lands and exporting it illegally to the United States by hauling the wood through private lands to the border and making it appear as if it had been cut on privately-owned property, from which export is illegal. Councillor Wetmore, of York County Council, recently stated that the provincial government should take steps to prevent this illegal export of the raw profits of the province. Warden Everett of York County also declared that the resources of that district were being taken out while the legislators sat back and watched it going on.

Gunns

Gunns Good FOOD

"But we hae meat, an' we can eat,——."

This is the sentiment that prevailed in many lumber camps, as the hungry diners sat down to the Christmas "eats" supplied by Gunns.

Replenish your supply of the following; now:

Beef, Veal, Mutton
Barrelled Beef,
Barrelled Pork,
Dry Salt Meats,
Butter, Cheese,
Oleomargarine, Lard,
Eggs, Poultry, Headcheese,
Canned Meats, Mincemeat,
Pork and Beans
Beans, Sausages.

Gunn's Good Food—"touches the spot."

There is an appetizing smell from the kitchen where "Easifirst" Shortening is used.

BEARINGS

The bearing is one of the most important parts of machinery—this is true in any industry—and the Lumber Trade is no exception.

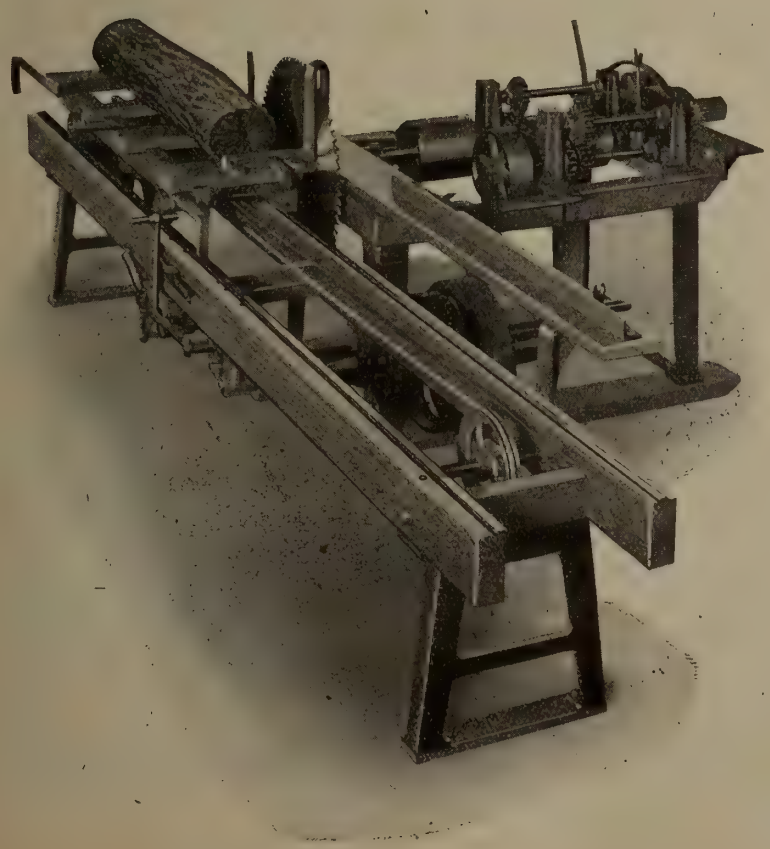
Line your bearings with scientifically made Babbitts alloyed under the "Stanley Process." It is an elemental fact that there is less friction generated by high grade babbitts;—when friction is lessened, the wear and tear on your machinery is diminished.

Babbitt is designed to avoid friction. A scientific alloy accomplishes this best by its smooth homogeneity.

Specify "Stanley Process" Babbitts

BRITISH SMELTING & REFINING Co. Limited.
Drummond Building Montreal.

Manufactures Lath Direct from the Round Log



No. 2 Combined
Lath Mill and Bolter

Illustration shows our No. 2 Combined Lath Mill and Bolter—A machine for manufacturing lath direct from the round log. The bolter is automatic and the mandrel carries a 24 in. saw. It is a machine for every modern sawmill and does rapid, continuous and thorough work.

LOG LOADERS AND SKIDDERS

Take the place of high-priced labor, do more work, better work, and at less cost than man power.

They will either load or skid your logs much more quickly than men or horses could do it, and at less cost.

They are always on the job, ready to do their maxmium work at a minute's notice, and will do as good work at 20° below zero as on a hot summer day.

They will handle with ease, either loading or skidding, one large log or two or more small logs bunched together.

They are small, light, compact and easy to move around, and also easy to keep in good working order.

They are made in two styles—gear driven, as shown, with motor mounted on same bed as hoist, and belt drive, with motor on separate base.

Write for further particulars.

Choice of either Gasoline or Steam Power.

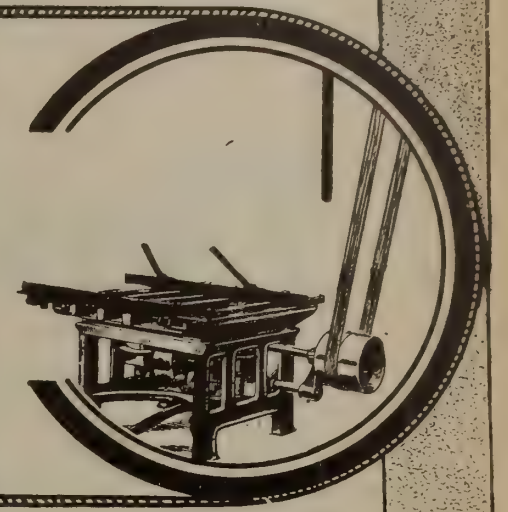
GOODHUE BELTING



FACTORY TO YOUR MILL

TO the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts," then you will buy a "Goodhue."
According to the conditions under which the belt has to run, we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality, but each made for a different service

PUTS AIR TO WORK

The Output of a Planing Mill

Shavings — Dust — Dirt

To the uninitiated visitor it would appear, at first glance, that these three items comprised the principal output of the average planing mill.

Do you collect Shavings—Dust—and Dirt in your mill, carelessly letting it accumulate to form a sinister fire risk?

Do you compel your workers to operate machines all day, in a stifling, dust-laden atmosphere, thus endangering their health?

And the machines—are they often so clogged that a temporary shut-down is of frequent occurrence?

The remedy is

Sturtevant
(TRADE MARK)

Planing-Mill Exhausters

This is the system that brings a small "cyclone" to the very edge of the cutting tool—whether it be saw or knife—and blows shavings and dust away to some outside place for disposal.

B. F. Sturtevant Company of Canada, Limited

Head Office and Works: Galt, Ontario
Sales Offices: - Toronto and Montreal

Sturtevant
PUTS AIR TO WORK

Sawdust and Shavings Heaped High

The presence of this refuse within any building is a constant menace.

The walls, beams, rafters and shelves, become coated with thick layers of dust, and the underwriters fix heavy rates where such conditions exist.

This is specially significant in a planing mill, where the pressure of work does not allow time for a clean up.

Why not arrange to keep your mill clean, as the work progresses, by the installation of a

Sturtevant (TRADE MARK)
aning Mill System

This system has found favor in a large number of Canadian mills.

Let us send our special Bulletin No. 261, giving complete information on Sturtevant Collecting and Conveying Systems.

An all the year round machine

The hard frozen logs of winter and the wet wood of summer is handled easily and swiftly by the Moreau Barker. This is made possible by reason of the simplicity of design and the extraordinary strength that characterizes the machine. All the materials used in its construction are carefully selected by us and the workmanship employed is of the highest grade.

We have no hesitancy in saying that where the simple instructions are followed, a saving in time, labor, money will result.

Over 500 Now In Use

The demand for GeBott Grinders has proven their worth in the short time they have been on the market. Many customers send in their repeat orders.

For grinding Band Wheels, and Planing Mill Resaws, the GeBott Grinder is supreme in its field.

Sturdy in construction, portable and entirely efficient, it is a machine that fills a long felt want in the planing mill. It is the only appliance that will grind a Clark mill without going into the pit to grind the lower wheel.

Write for further information .

ONTARIO

Canada's Banner Province

Ontario's timber production last year valued at $26,774,937 or 40% of Canada's total output.

Pine production,	905,442,000 ft. B.M.
Pulpwood,	246,282 cords.
Railway Ties,	5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

For maps and full information regarding Ontario, apply to

MILLMEN

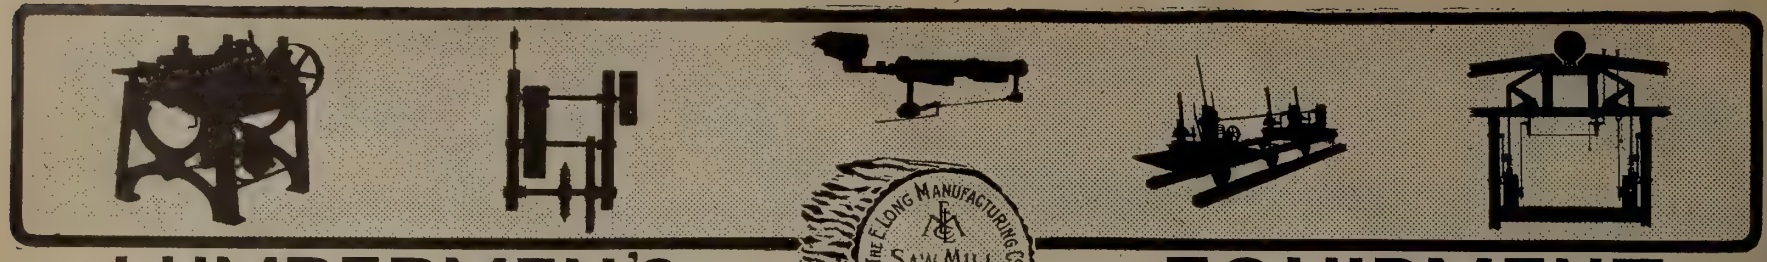
and others interested in Steam Power Plants

Whether you contemplate building a new or repairing your old power plant it will pay you to investigate our recently patented Steel Water-Jacket Furnace. This brickless furnace is built of heavy steel plates, spaced apart, forming a water jacket all around, carrying same amount of steam as boiler. Splendidly adapted for use of portable mills as it is easily moved and placed in position. Burns sawdust or mill refuse of any description, while at the same time it generates one hundred per cent. more steam than will any other type of furnace. Conforms to any style or type of boiler, either straight draft return or water tube.

Do you, or do you not want to save half your coal? It's up to you. Ask for particulars.

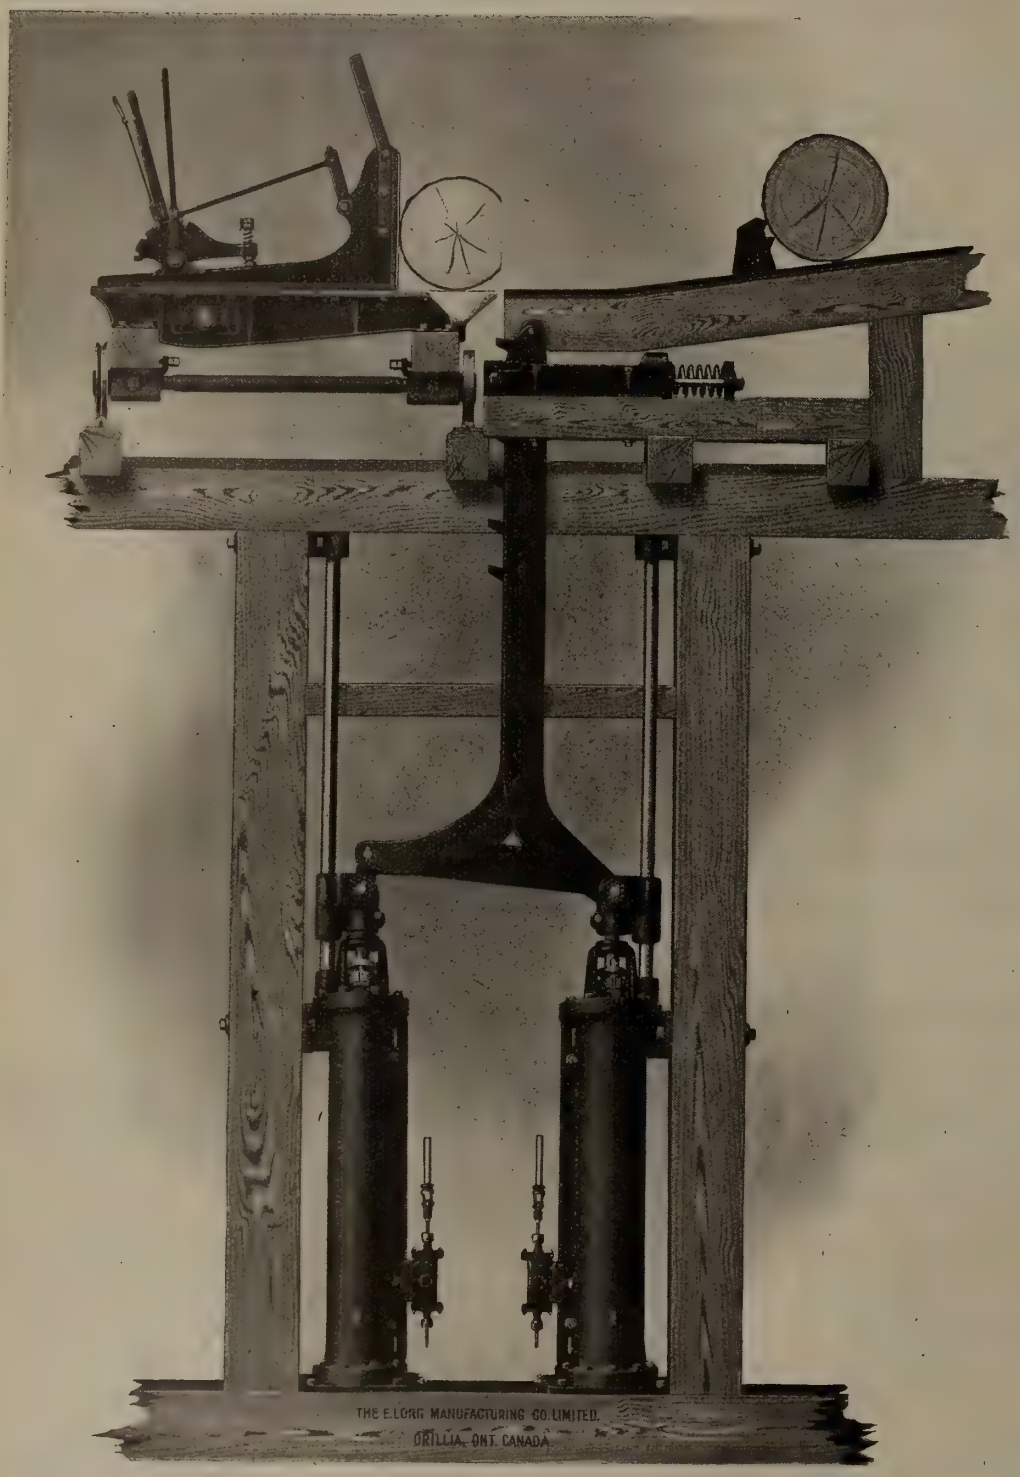
DEMING BROS.,

Woodstock - New Brunswick



LUMBERMEN'S EQUIPMENT

THE E. LONG MANUFACTURING CO. SAW MILL MACHINERY ORILLIA, CANADA



A familiar sight in many a mill throughout Canada is this Stationary Cylinder Steam Nigger.

And it is proving its worth to its owners day in and day out by the tremendous saving it effects.

If your men are still handling the logs by use of the old fashioned oscillating niggers, by friction or by hand there is a definite need for this machine in your plant.

Let us send you our catalogue describing it in detail together with prices and other information.

Williams & Wilson Ltd., Montreal

Waterous "Trouble-Proof" Haulup Chains

The efficiency of your haulup depends directly on the strength and the wearing qualities of your log chain. Waterous Chains have more than their share of both. They are built of selected materials. The shop work on them is of the very best. They are tested and inspected before shipment.

Next time you order—think of "Trouble Proof"—and specify "Waterous."

Waterous Forged Bull Chain

This chain is forged from the best refined wrought iron. It is 6 inch pitch and is built in seven sizes, ranging in weight from 2½ lbs. to 15 lbs. per foot. Iron, steel and wood specials of various forms are supplied with this chain. It can be used on all size Bull Wheels and is also adapted for Rough Wood and Refuse Conveyors.

Short Link and Long Link Coil Chain

For strength and general usefulness this chain is hard to beat. Fifteen sizes are built ranging in weight from 150 lbs. to 2,335 lbs. per 100 feet. Only the best chain iron is used in its manufacture, welds are exceptionally long and carefully made, and all links are tested for size and uniformity before leaving the shops.

Waterous All Steel Haulup Chain

The heaviest, largest logs can be handled on this chain. It is the longest lived and cleanest chain we build. It is 8 inch pitch throughout and carries a heavy cast steel special spaced every 6 feet. Side bars, centre links, and connecting pins are all of steel, the links and bars being drilled for the reception of the pins.

We also build Malleable Log Chain, Roller Haulup Chain, Chain for Pulpwood and for Saw Dust Conveyors.

Any length can be supplied.

Our list of Specials, Sprockets, Idlers and Spools is exceptionally complete. These are are illustrated and described in our Chain Catalogue No. 108, which we will be glad to supply on request.

HEAD OFFICE: OTTAWA, ONT.

A Fast Feed Matcher Head scientifically designed for matching from 300 to 800 lineal feet per minute.

The SHIMER Fast Feed Expansion Matcher Head
With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.
These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.
The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.
The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market. WRITE FOR PRICES

BOLINDER'S Automatic Box Board Machine

A machine that converts narrow lumber into high grade box shooks at a minimum cost.
The machine takes rough boards and Planes, Dovetails, Glues, Joints, and makes up finished Box Sides and Ends to exact dimensions required.
The entire operation is performed automatically from the time the boards are fed into the machine until the finished box side or end is delivered.
Capacity up to 12,000 S. Ft. finished shooks per 10 hours, with only two men at the machine.

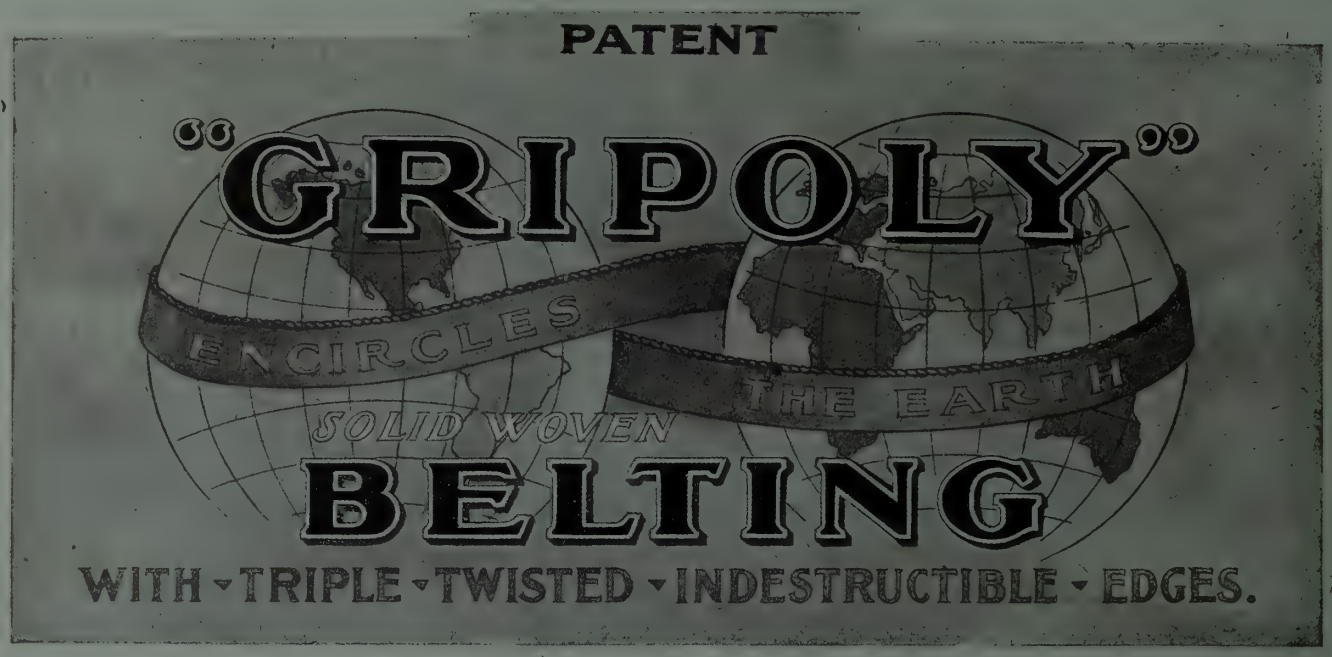
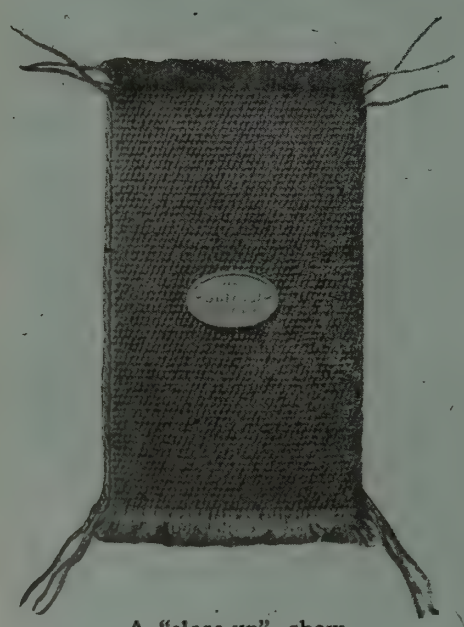
Defies Destructive Elements





A "close-up" showing the "Gripoly" triple-woven edges. Prevents wear from constant rubbing against guide forks, etc.

"Gripoly" is made in Great Britain by Lewis & Tylor, Limited

Belting, especially in lumber mills, is subjected to dampness, oil, heat and cold.

To illustrate the effect these have upon ordinary belting, we will quote:

"Leather belting is ruined by moisture.

"Heat separates Balata belting. Rubber belting is destroyed by oil, and grease, also by heat and cold."

"Gripoly" Belting is absolutely unaffected by any of these influences.

It never slips—thus conserves power. The edges are twisted and interwoven with the belt —they are indestructible.

Write to-day for booklet.

Brighter Days Ahead

The last two or three months business has been on a vacation. Perhaps like the rest of us it has needed it after about four years of top speed.

But:—

It's back on the job again, and while it hasn't begun to show its old time form, it's in a much **healthier condition** than it was two or three months ago, and along about March, our guess is, will be going strong again. Your stocks should be checked up, then you should write us about your requirements.

Speed is Sometimes an Important Factor!

Like the young chap in the picture you are no doubt sometimes in a hurry. Perhaps an unexpected demand has cleaned you out on a certain line or lines. You must replace them immediately. Then it is that "Grier Service" comes into play if you will but take advantage of it. You will then appreciate the value of our facilities which, together with an earnest desire to co-operate with the dealer ensures the rush order being filled carefully and quickly.

THERE'S MONEY FOR YOU IN

BRITISH COLUMBIA WESTERN HEMLOCK

There's a real profit for dealers in British Columbia Western Hemlock, not only because it is a reasonably priced wood but because it is actually capable of rendering a quality of service exceeded by no other wood in uses for which it is recommended, and that's what will hold your trade for you.

BRITISH COLUMBIA WESTERN HEMLOCK is excellent for framing, sheathing, flooring, inside and outside finishing, lath and scores of other uses. Maybe you didn't know all this but it is so, having been demonstrated time and again and proven by Government Statistics.

We'll be glad to send you British Columbia Western Hemlock in mixed carloads, along with our other BIG CHIEF Brand Specialities—British Columbia Red Cedar Shingles—and Cedar and Fir Lumber in all sizes known to high-class manufacture.

Vancouver Lumber Company, Ltd., Vancouver, B.C.

SALES OFFICES at WINNIPEG, Man., TORONTO, Ont., CHICAGO, Ill.

If You want the Best Value in Lumber Obtainable in the Mountains, Your Choice Should be

Golden Spruce

GOLDEN AIR-DRIED SPRUCE is unequalled for your requirements in Boards, Shiplap, Shelving, Flooring and Siding, and you can rely upon getting DEPENDABLE GRADES.

EASTERN RETAIL DEALERS will find 1 x 8 GOLDEN EXTRA SELECT SPRUCE BOARDS an exceptionally good seller. Can be worked to any pattern desired. Supplied either 3/4 or 25/32" thickness. Try some.

We also manufacture Fir and Cedar.
Spruce, Fir and Cedar Lath.

Just another reminder. Our stock always comes to you bright, clean, and newly milled, being run through the planing mill at time of shipment.

With a daily nine-hour cutting capacity of 180,000 feet, and a stock of 10 to 20 million feet at all times, we are in position to give prompt shipment. Urgent orders given special attention.

HARDWOOD LUMBER

THIRTEEN BAND MILLS
SIX PLANING MILLS
ELEVEN FLOORING UNITS

ANNUAL CAPACITY:
130,000,000 feet.

Lumber generally is now being sold by the producer at less than the cost of production.

We have closed all our sawmills and planing mills.

Our yards are full.

Consumption of lumber is slow.

Authorities say that stocks of lumber in the hands of dealers and consumers are far below normal.

Everyone knows the extent of the arrearage in building and construction lines.

The subnormal consumptions of the past must be made up, some time in the future by an extra or abnormal consumption.

These fundamental facts are so plain, and the deductions therefrom so obvious, that we would doubt the value of the business of any one who required to be told, the obvious thing to do under present conditions.

No one can doubt the wisdom of buying at present figures. Conditions, however, are such that consumers are and will be more exacting in respect to quality and service.

OUR LUMBER IS UNSURPASSED IN INTRINSIC QUALITY;

OUR MANUFACTURES ARE STANDARD;

OUR SERVICE IS THE SYNONYM OF EFFICIENCY.

Better Sleep — Greater Efficiency

Welfare Workers in Industrial Plants, Lumber and Construction Camps Vouch for this Statement and Employers of Labor Know It Is True

WHEN employers of skilled and unskilled labor thoroughly understand and appreciate the value and importance of sound, restful sleep, and provide suitable sleeping quarters, there will be less discontent and greater efficiency among their workers.

Deep, sound, health-building sleep is necessary to the proper functioning of brain, nerve and muscle. It is vital to the health—physical and mental activities of all men —in all walks and stations in life. It is especially necessary to the production efficiency of men who labor.

In industrial dormitories, lumber and railroad construction camps; wherever the value and importance of *good sleep* is appreciated, Simmons Steel Bunks are usually specified and most used.

These standardized Bunks, in single or double-deck units solve the problem of the "right sleep for the men" in a practical way.

Write today for full information regarding our sanitary, comfortable, and serviceable standardized Steel Bunk Units. Complete data, specifications and illustrations of all styles, furnished promptly upon request.

LUMBERMEN'S UNDERWRITING ALLIANCE

U. S. EPPERSON UNDERWRITING COMPANY, Attorney-in-Fact
2nd FLOOR INSURANCE BUILDING

Kansas City, Mo., January 1, 1921

TO SUBSCRIBERS LUMBERMEN'S UNDERWRITING ALLIANCE:

SIXTEENTH ANNUAL REPORT

In submitting our sixteenth annual statement for the year ended December 31, 1920, we feel assured that you will share our gratification at the very satisfactory saving, the continued growth and the increased strength of the ALLIANCE.

SAVINGS:

1920 added another year of saving to that made for our subscribers in every single year of the sixteen years' existence of the ALLIANCE. The percentage of gross earned deposits saved to subscribers is **33.44%**. This saving is based on earned income; in other words, it is the proportion of all income earned during the year 1920 saved to subscribers.

During last year **$264,466.11** was paid to subscribers saving dividends, bringing the total amount of dividends paid up to **$1,633,284.16**; and there remains to the credit of subscribers earned surplus, or saving of **$1,681,103.41**, making the saving to subscribers for the sixteen years, **$3,314,387.57**. In addition to this splendid saving, subscribers have been paid during this period fire losses of **$5,525,546.97.**

GROWTH:

The volume of insurance in force has passed the one hundred million mark. The amount in force at the close of 1920 was **$109,705,814.22**; at the beginning, **$81,904,048.52**; an increase for the year of **$27,801,765.70.** This growth exceeds the phenomenal record for 1919; it is the largest increase for any single year. There are now **1,011** subscribers, which means that there has been a net increase during the year of **147.**

STRENGTH:

The unquestioned soundness of ALLIANCE indemnity is safeguarded and guaranteed by the large annual income and **$2,651,193.36** of ready resources consisting of the following:

Cash in Banks		$1,013,372.71
High Grade Bonds and Accrued Interest		1,180,848.16
Premium Deposits in Course of Collection		456,972.49
		$2,651,193.36
After deducting the unpaid losses of	$54,920.00	
And the amount due Attorney for administration expense	87,548.74	142,468.74
There remains a surplus and re-insurance reserve of		$2,508,724.62

The re-insurance reserve is composed of the unearned deposits on live policies. These amount to **$827,621.21**, leaving a remainder of the surplus and re-insurance reserve of **$1,681,-103.41**, which is the net earned surplus on hand.

FIRE PREVENTION SERVICE:

The lumber industry, along with other business, experienced in 1920 changed levels and conditions. The year came in with peak prices and a demand which could not be supplied; it ended with prices ranging below cost of production, with the demand almost nil. Thus the fire hazard was more than normal in the first half of the year, because of inefficient labor and exerting of every effort to speed up production. The hazard was more than normal again at the close of the year, because there was little demand, resulting in the exercise of rigid economies. Notwithstanding this the ALLIANCE made a splendid showing for the year.

We wish to impress upon subscribers the importance of using all available means to prevent fires. We urge that no one neglect the care and order of his property and the maintenance in perfect order of the protective equipment. Inattention to these vital safeguards will prove to be false economy and result in the fire dragon taking more than his usual toll. Our inspection force has taken up the work this year in full swing and we earnestly seek the co-operation of subscribers in the prevention of fire.

We hope the best use will be made of the educational fire bulletins. Prompt action on the recommendations of inspectors and careful study of the conditions which have caused fires or prevented the control of fires, as reported in the Bulletins, will be a vital factor in keeping the losses down to the minimum.

DIVIDENDS:

Again the excellent saving makes possible the payment of the usual regular annual dividends. Checks will be mailed just as soon as the amount to be paid each subscriber is determined in accordance with Clause Eight of the Power of Attorney and the checks can be written.

U. S. Epperson, President
U. S. Epperson Underwriting Company,
Attorney and Manager,
Lumbermen's Underwriting Alliance.

Simonds Inserted Tooth Cut-Off Saws on Greatest Slasher Rig

Sixteen 42 inch Simonds Inserted Tooth Cut-Off Saws operating on one slasher rig is probably the record number of this type of saw doing business in any pulp mill in the world.

These saws are operating daily in the mill of the Crown-Willamette Pulp & Paper Company, Oregon City, Oregon. They are 42 inches in diameter, 6 gauge and were selected from the regular Simonds stock and not made to special order. As there was no paper mill at that time that had a complete slashing rig made up of Inserted Tooth Cut-Off Saws, these 16 Simonds were selected for a trial by the Crown-Willamette Company. They at once justified their selection and gave excellent results, proving that the Simonds Inserted Tooth Saws cut easier and smoother, and eliminate slivers which generally come out at the end of the cut when other saws of a different design were used.

DAVIES

LUMBERMEN'S SAUSAGES

Made specially for use in the Camps, particular care being taken to put in same only such material as will ensure satisfaction. The quality is kept at a standard, and the flavour is sure to please. Packed in suitable containers. Tubs where desired, into which product is sealed by lard, or frozen if necessary.

We are also prepared to offer a very satisfactory line of Jam Compound, which is most suitable for use in construction and lumber camps. Write us for price and size of package.

A full range of Pork and Beef is now being carried, with special prices ready for car load buyers. We solicit your enquiries, as our prices are in line and quality right.

Write or wire us (at our expense) for prices, particularly if you are needing beef. Our position on beef is very good.

Orders by mail given preferred attention.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

Single copies 15 cents.

"The Canada Lumberman" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills etc. "The Canada Lumberman" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and " For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Vol. 41 Toronto, February 1, 1921 No. 3

Broad Policy in the Lumber Line

Expansion and confidence, co-operation and service are the watch-words and slogan of the Canadian Lumbermen's Association. At the recent convention, held in Ottawa, representative manufacturers and wholesalers gathered from various portions of the Dominion to take counsel together, relate their troubles, exchange their views, and confer regarding prospects for the coming year. The utmost harmony prevailed, a spirit of goodwill was evidenced everywhere, and while it was admitted on all sides that conditions were quiet and the cut this year would not be nearly as large as the one of last season, yet withal it was felt that 1921 would be a prosperous period for the operator, the wholesaler and the retailer.

The delegates all had confidence in themselves and faith in the industry, backed by a thorough conviction that conditions in Canada are, in spite of economic excrescences, fundamentally sound. There was no note of pessimism and no blue ruin talk; in fact, there was a quiet confidence which betokens steadiness of purpose, conservatism and sane judgment.

In times of stress and strain, difficulty and danger, there are two factors which often lead to unpleasant results. One is the plunger, the speculator and the gambler, and the other is the mark-timer, the grouch and the dyspeptic. He who takes a middle course on such occasions, is one who generally comes out right in the end. Taking thought of the morrow and shaping one's course and conduct in accordance therewith, is good business and wise precaution at a time when there is some uncertainty and probable danger ahead. To-day is not a time for violent action or great slaughter sales in the lumber arena.

The needs of the country in the construction line are great. Never was there such an urgent call for the products of the forest, and while the generous demand, that is bound to come, may be delayed there is no doubt that it will manifest itself sooner or later. In the meantime, stabilization of prices and production is highly desirable. President McLachlin ably summed up the situation, in so far as the future is concerned, when he stated that replacement values must continue high till a cut of lower-priced logs can be made, and that there could not be a serious drop in the cost of production till the logs taken out next winter reached the mills. He also emphasized the fact that wood is and always will be the best and cheapest material for the size and price of the average house now most in demand. The president struck a high note when he said that the broad policy of the business world must be a steady and not a hasty decline in prices and that each individual problem had a bearing on the industry as a whole.

January, 1921, finds the Canadian lumberman facing the future with calm assurance and a firm resolve that he will play the game in the best interests of the industry and the welfare and uplift of those associated with him in the great and growing problem of supplying the wants, not only of Canada but of other nations, with the wood of Canadian forests.

There is no reason from gloom, no basis for prejudice, no ground for distrust and no foundation for depression. Readjustment is proceeding slowly, but surely. The displacement caused by a five-years' war cannot be made right in less than half that time, and there are bound to be ebbs and flows in the stream of business more sudden and surprising than in normal times. Underneath it all there is a firm faith and a strong hope that with a broad gauge business policy, a fair measure of confidence, closer co-operation and a more sincere desire to render service and strike an even balance between production and sales, everything will come out alright.

There is no danger but that the lumber industry will weather the storm and will add its quota in aiding the return to normal business activity and prosperity. The lumbermen have always played the game and played it openly and honestly, and in the somewhat precarious period through which they are passing, they will not fall asleep at the helm and will meet each situation as it arises with courage, optimism and vision.

Should Kill Anti-Shingle Legislation

Writing to the press on the proposed anti-wood shingle legislation, A. E. LePage, who is a widely known bungalow specialist of Toronto, says: "It is with a great deal of surprise and indignation that I learn that the Legislature is contemplating a measure to prevent the use of wooden shingles on account of their fire menace.

"Surely such a ridiculous move is not being seriously contemplated. There are enough restrictions and price holdups to stand in the way of builders now without legislation of this kind.

"As far as Toronto is concerned, I think you will find that there have been very, very few fires caused through the use of wooden shingles, and to eliminate their use would immediately cause another rise in the building cost, as slate, tile and metallic or asbestos roofing (the only absolutely fire-proof materials), are high in price, and the elimination of wooden shingles would make a tremendous demand on the different styles of ready roofing, so that in all probability the prices would be advanced on them, and to my mind the most of them are more inflammable than shingles. I think that you will find that the fire underwriters' laboratory tests in the United States will bear me out.

"For the sake of all the people that contemplate building this year, and from the fire hazard point of view, I certainly hope that you will enquire carefully into this matter and do everything to have a thorough investigation before such legislation is passed, and greatly oblige"

"A traveller in the North country was treed by 17 wolves for 24 hours. Finally 15 of the wolves disappeared and were gone for eight hours, when they reappeared, accompanied by two beavers. The assistants proceeded to cut down the tree." A traveller, who heard this recently, did not disbelieve the story, but he was worried because the story failed to tell what happened to the man.

Great Gathering of Lumbermen in Ottawa

Most Representative Assembly in History of Association—Traffic Bureau will be Established—Next Convention in Toronto—Many Live Topics Discussed

The largest, most enthusiastic and most successful convention ever held in the thirteen years history of the Canadian Lumbermen's Association took place on January 12th and 13th at the Chateau Laurier, Ottawa. Over 200 delegates were in attendance, many of them being accompanied by their wives. Numerous important matters were discussed and an aggressive stand taken on a number of leading issues.

The most outstanding feature, perhaps, of the convention was the decision to establish a Traffic Department in the near future and place an expert in charge of this branch. The details will be carried out by the new Executive.

Other live topics under consideration were the opposition to the proposed anti-wooden shingle legislation in Ontario, a protest against the re-enactment of the Excess Profits Tax, the necessity of greater production and stabilization of trade conditions in the Dominion, and opposition to any increase at the present time in the rates of compensation under the Workmen's Compensation Act of Ontario.

The federal government was also commended for its action in holding hearings throughout Canada in an effort to make the customs tariff "non-scientific in construction and application," while the importation of unnecessaries and luxuries should be discouraged. The text of the resolutions passed on these and other subjects will be found on another page.

The discussions at the business sessions were ably conducted. The expressions of opinion were hearty and general ad there was a spirit of unity, optimism and co-operation evidenced which marks a ew epoch in the welfare and status of the Canadian Lumbermen's Association which has now become a great national body.

A detailed report of the agenda is published in this issue of the "Canada Lumberman," and will, no doubt, be read with interest in view of the vital matters that were brought to the attention of the industry.

The social features of the convention were admirably arranged and formed a delightful part of the proceedings. The people of Ottawa and members of the Ottawa Valley Lumbermen's Association did everything in their power to make the visit of the delegates a memorable one, and in no previous gathering since the inception of the Canadian Lumbermen's Association in 1908, have the business and entertainment of the representative assembly been surpassed.

Dan. McLachlin, of Arnprior, Ont.. president of the Association, was particularly anxious to retire, believing that the honor should go round and that the precedent, of a two-year term should be abolished. He thought that interest in the C. L. A. would be greatly increased by the presiding official holding office for one year only. While the subject was under discussion, W. E. Bigwood of Toronto took the chair and among the speakers were A. E. Clark, Gordon C. Edwards, and others, who said that in view of the many important matters to come up during 1921 there should be no change in the personnel of the presidency. Mr. McLachlin's suggestion that the president be elected for only one year could go into effect in 1922, but during the coming year it was not advisable for the reasons outlined, to make any change. Mr. McLachlin had devoted much time and attention to the duties of the position. It was moved by Mr. Clark and seconded by Gordon C. Edwards, that Mr. McLachlin remain in the chair for another year. This motion was carried unanimously and the result was received with much applause. Mr. McLachlin was then sent for and escorted to the chair and modestly remarked that he would have to obey the will of the majority and continue in the office for another term. He expressed his deepest thanks for the unexpected honor.

The Officers and Directors Elected

The following are the officers elected by the Canadian Lumbermen's Association for 1921:—

President, Dan. McLachlin, Arnprior, Ont.

First Vice-president, A. E. Clark, Toronto.

Second Vice-president, A ngus McLean, Bathurst, N.B.

Hon. Treasurer, R. G. Cameron, Ottawa.

Secretary, Frank Hawkins, Ottawa.

The seven new directors elected to serve for the next three years, were as folows:—

Ontario, E. R. Bremner, Ottawa; Dan. McLachlin, Arnprior.

Quebec, David Champoux, Restigouche; Brig.-Gen. J. B. White, Montreal; George W. Grier, Montreal.

New Brunswick, J. Fraser Gregory, St. John, N. B.

Alberta, Manitoba and British Columbia. E. C. Knight, (Vancouver Lumber Co.), Vancouver, B. C.

The retiring directors were, E. R. Bremner, Ottawa; D. McLachlin, Arnprior; W. C. Laidlaw, Toronto; George W. Grier, Montreal; David Champoux, Restingouche; J. Fraser Gregory, St. John, and Sir. D. C. Cameron, Vancouver.

Toronto was selected for the next convention. It is five years since the gathering met in the Queen City. The representatives from Toronto assured the delegates that everything possible would be done to make the 1922 gathering a signal success. The motion to hold the convention in the Capital of Ontario was made by A. H. Campbell, of Montreal, and seconded by Gordon C. Edwards, of Ottawa, and carried unanimously after A. C. Manbert and A. E. Clark had strongly presented the claims of Toronto to be the Mecca of such an influential and progressive body as the Canadian Lumbermen's Association. It was also stated that the new seventeen storey addition to the King Edward Hotel would be completed before the next annual meeting and that every facility would be placed at the service and convenience of the visitors.

There was some informal discussion about the exact date of the next meeting, but the matter was left in the hands of the new Executive. The gatherings have always taken place early in February but the change this year to the middle of January was a welcome one. It is probable that in future the annual conclave of the lumbermen will eventuate two or three weeks earlier than the usual date.

Able Address by Mr. McLachlin

The report of Dan McLachlin, of Arnprior, Ont., president of the C. L. A., was an interesting summary of the present situation and outlook, and was as follows:—

To the Officers and Members of the Canadian Lumbermen's Association:—

Gentlemen,—In calling the meeting to order for our 13th annual convention, I greet you as an association that has progressed greatly during the year just closed. We are larger to-day than ever before and our ability to benefit our members has increased with our numbers. Our usefulness is greatly increased by the active interest of our members.

The change in general business conditions since our last meeting in Quebec has disturbed the lumber trade in common with the the rest of the commercial world. We should remember, however, that there is no surplus lumber to be disposed of, as existing stocks and probable production for 1921 are both far below the pre-war average. The country is seriously underbuilt, which should indicate a good demand for lumber when cement, hardware and labor are available for house construction at prices that are somewhat more reasonable. Wood is and probably always will be the best and cheapest material for the size and price of house now most in demand.

No Need to Slaughter Stocks.

There is no reason to slaughter lumber prices, as the cost of production is still at the highest level ever known to the trade, and replacement values must continue high till a cut of lower priced logs can be made. The log cut is an annual crop, so there cannot be a serious drop in the cost of production till the cut of next winter reaches the mills.

We are on our way to a pre-war basis though the adjustment will be a slow one and must come in order from the source of supply down the channels of distribution to the consumer. But no buyer may expect substantial reductions until freight charges are subject to the same revision as other services and commodities. The cost of living has started down and abundant crops insure against anything but a downward trend for the next year.

The broad policy of the business world must be a steady but not a hasty decline in prices, all reductions to be warranted by replacement values. The broad policy is clear but the details require that most careful consideration and scrutiny which only a gathering such as this can give to them. Each individual problem has a bearing on

Honorary Treasurer of C. L. A.

our trade as a whole and the free discussion of lumber questions must benefit us all.

Good Clearing House for Ideas.

The value of an association such as ours is great in many directions, but I often think that it serves us best as a clearing house of opinions. We each have individual problems which, after all, are very similar to the other man's, and a solution that answers for one may often be altered to fit your case or mine. Each comment, that is given on the various points as they arise, will directly benefit us all and a query may aid in the solution of a knotty point.

I regret to record the loss to our association through the death of Mr. Wm. Power, and old and valued friend and member.

The detailed report of your executive committee and the secretary's report will lay before you our activities during the year.

In conclusion, I wish to thank my fellow directors and members for cheerful and able assistance and counsel in the various matters that arose during the year, and to acknowledge with thanks the energy and ability of our honorary treasurer, our secretary and the staff.

Executive Committee Reviews Work

Your Executive Committee has to report as follows:

There are no old subjects to be brought forward from the last annual report but we have to report the conditions as they exist to-day. As you all know, the Business Profits War Tax was revised by Chapter 36, 10-11 George V, assented to July 1st, 1920. We need not repeat the revisions of the act, as no doubt they are all familiar to you. Our information is that the Business Profits Tax may be discontinued entirely at the next session of Parliament, but it will probably help matters along in this direction if a strong resolution is passed by this association objecting to a continuance of the Business Profits Tax.

It is to be noted that after a careful canvass of the industrial leaders in all sections of the United States the Excess Profits Tax in that country is in bad favor everywhere, and that in lieu thereof a gross sales tax was favorably regarded as a substitute.

Sales Tax—Labor Conditions.

When this Sales Tax, which became effective May 1st, 1920, came before us, in the interests of the association we had a number of interviews with the Dominion authorities regarding our industry, and we believe that as a result a proper understanding of the rules and regulations adopted by the department was the more readily realized by our members.

The British people are to-day paying taxes up to 35 per cent., including local taxes. In other words, mills, shops, factories, railways and ships are working eight months for themselves and four months for the Government. One firm has paid as much money in excess profits duty as seven times its capital. Another firm, consisting of five partners, after paying its rates and taxes, found that they had made seventeen cents per hour whilst their employees were earning forty-three cents per hour. These are conditions which our labor friends would be well advised to consider very carefully.

Labor conditions have changed rapidly in the past months. In view of the cost of living, which is still high, although falling, all labor adjustments should be along the lines of increased efficiency rather than drastic wage reductions. That wages will fall is inevitable and the reductions should be parallel to commodity prices.

Lumber Exports of Past Period.

The lumber industry has been doing its part in an endeavor to restore normal conditions and get back to a reasonable rate of exchange. Our exports of boards, planks and other sawed lumber to the United States for the nine months ending September were:—

1918	$26,991,453
1919	22,320,210
1920	45,098,839
In Laths—	
1918	$ 814,334
1919	1,884,562
1920	3,651,975
In Shingles—	
1918	$4,537,672
1919	5,594,908
1920	9,530,038

Of course, undoubtedly the higher prices had something to do with these figures, but the actual shipments were very considerably increased.

Our European export trade cannot be said to have regained its normal position owing to the fact that there are still millions of feet of British Government owned lumber piled on this side awaiting shipment, and until the British pound sterling is restored to its pre-war value it makes it increasingly more difficult for Canadian exporters to sell in that market.

We think that an exhaustive investigation should be held to inquire as to the species of imports Canada is making. We feel that a large percentage of such imports are either luxuries or non-essential. It is inconceivable that we are importing so enormously of what we regard as raw materials, manufacturing it in Canada and then re-exporting it in the form of manufactured goods at prices which leave us so enormously a debit country. We feel strongly that the Government should take drastic action in this case to enforce that the Canadian dollar shall be worth the equivalent of 100 cents of any country's money.

Your particular attention is called to the fact that there is a proposal to create in the United States a Foreign Trade Financing Corporation with a capital of $1,000,000,000 for the purpose of providing credits for foreign sales. It is further stated that the Lenine grant to American interests through Washington D. Vanderlip in Western Siberia are valued at $3,000,000,000 and the present time is regarded as opportune for the United States to open up a trade with Russia, and the probabilities are that this will be done within six months.

The Tariff and Traffic Bureau.

Notwithstanding the fact that tariff investigations have been held at various points in Canada during the year this association has refrained from making any representations thereat. We think, in view of the conditions that exist, that a change in the fiscal policies would only invite trouble and probably retaliation. At the same time the recent Emergency Tariff Bill introduced into the United States House of Representatives at Washington can be regarded as an indication that the incoming administration will undoubtedly carry out their pledges and introduce tariff revision.

We have had several inquiries during 1920 with reference to

whether or not we had a branch devoted to the investigation of freight traffic charges and the making of claims for overcharges in such cases. We lay this matter before you for your consideration. Your Executive Committee, however, may say that arrangements can be made whereby such work can be performed by an expert tariff man who is valuable and who would be glad to undertake the work in his spare time. In this way there would be no additional cost to the association, and we believe that it would come to be regarded as a distinct advantage in co-operative service to our members.

The Attack on Wooden Shingles.

As you are all probably aware, Mr. J. B. Laidlaw of Toronto, who is manager of the Norwich Union Insurance Co., of Canada, read a paper at the Second Annual Meeting of the Ontario Fire Prevention League in Toronto, October 5th last, entitled, "The Fire Menace of the Wooden Shingle Roof." The following resolution was adopted at that meeting:

"That the Ontario Fire Prevention League request the Legislature of Ontario to pass an act, to be of general application in every part of the province, and with no exceptions, to prohibit the use of wooden shingles or other combustible material as a roof covering on any building hereafter erected nearer than fifty feet to an existing structure, and to prohibit the extensive repair of any existing roof covering composed of wooden shingles or other combustible material."

The statements made by Mr. Laidlaw were so manifestly absurd and unjust that we wrote a letter to Mr. Arthur Hewitt, the president of the Ontario Fire Prevention League, protesting against any action being taken by them with regard to requesting the legislature of Ontario to pass such an act, and a copy of this letter was also forwarded to the Prime Minister, the Honorable E. C. Drury. Beyond the mere acknowledgment of our letter and a promise to reply to it we have had no further word from the president or secretary of the Ontario Fire Prevention League, and as we have in the meantime obtained a lot of very valuable information we think that a strong resolution opposing such vicious legislation as this should be adopted at this meeting and forwarded to the Ontario Government, as we are satisfied that such legislation would not be in the interests of the public and if adopted by the province of Ontario might also be introduced in other provinces and similar legislation enacted there. We are astounded at the statements contained in Mr. Laidlaw's paper.

Lumber for Building Purposes.

That lumber for purposes of construction is still by far the cheapest form of building even at the alleged high prices of lumber is evidenced by the reports which have been made from time to time on this subject in the United States.

The percentage of lumber and mill work runs all the way from 22 up to about 34 per cent. of the total cost of buildings in various parts of that country and it has been found that taking a wood frame construction as a base, cement stucco on wood lath costs 11 per cent. more, cement stucco on metal lath 18 per cent. more, brick veneer on lath 190 per cent. more, solid brick 128 per cent. more, hollow tile 56 per cent. more. We are indebted to the American Lumberman for these figures.

The Invasion of Southern Pine.

We have received several letters from members calling our attention to the fact that southern pine is alleged to have been coming to Canada in the last few months, particularly into the province of Ontario, in very large quantities, and suggested that some steps should be taken against the dumping of this material into Canada at this time. Our reports do not indicate that this import has been exceptional up to the end of August last. Since then of course there may have been considerable change, but we would call attention to the fact that according to the Monthly Trade Barometer issued by the Southern Pine Association the production of southern pine for the month of October was only 68 per cent. of normal, shipments only 65 per cent. of normal, although stocks showed 7 per cent. over normal. This is to be accounted for by the fact that our southern friends lacked orders which only amounted to 51 per cent. of normal during that month. We regard this merely as a passing phase, and in view of the undoubted fact that there is practically a house famine in the United States, we can see nothing else than that there must be in the near future a very heavy demand upon Canada to help supply these most pressing needs. The exhaustion of southern pine, if not its rapid extinction, may be gauged from the following extract taken from the bulletin issued by the Conservation Commission of Canada:

Exhaustion of Southern Pine.

"According to a bulletin just issued by the Spruce Production Corporation of the United States War Department, only four mills out of 2,043 southern pine mills have timber supplies (southern pine) which will last more than twenty years. More than 1,600 mills will have exhausted their supplies in five years or less, and more than 1,900 mills in ten years or less. Attention is drawn to the fact that this rapidly approaching depletion, coupled with an expanding world market for timber, is bound to result in heavier demands upon the great timber areas of the Pacific coast and Canada. The present generation of timbermen in Canada will probably benefit as a result. This benefit may be extended to posterity if the short-sighted policy of the southern lumbermen is avoided."

Insurance and Telephone Rates.

We sent out a circular in April last advising that there was a proposal on foot to tax unlicensed insurance companies, that is to say, to tax the net cost to the assured having cover in unlicensed companies not to exceed in any case 15 cents per $100 of insurance. This legislation did not pass. We do not know the reason why but it is altogether likely that a revised law may be passed at the coming session. The idea is not to discourage the use of unlicensed insurance but to control their operations in the same way that old line insurance companies are controlled by the insurance department. Of course the companies can, if they so desire, secure registration in Canada in which case the proposed tax would not operate.

As this association is Dominion-wide, and inasmuch as the Bell Telephone Co. does not operate in all provinces it was decided that the association would not make any representation to the Board of Railway Commissioners regarding the proposed increases.

We have received a letter from the secretary of the Canadian Standards Association asking us to nominate one of our members to the committee having in charge the contemplated preparation of specifications for wood poles for transmission lines. In this connection we have also received a number of inquiries during the year as to whether we had adopted grading rules for various kinds of lumber and we have received also from the secretary of the Ontario Retail Lumber Dealers' Association copy of a resolution adopted by that body as follows:—

"That the association appoint a committee on the subject of lumber grading rules, this committee to have power to confer with representative committees from the Canadian Lumbermen's Association and the Wholesale Lumber Dealers' Association on this subject and that we recommend that a joint committee for this purpose should consist of about nine members, three to be elected from each of the three associations."

The question is again put before you as to the advisability of the Canadian Lumbermen's Association formulating and adopting uniform grading rules for lumber.

We have adopted a crest and we hope that it meets with your favor. You will find in your places here a circular letter advising that electrotypes of this can be obtained by leaving your order either at the registration booth or with the secretary. The electrotypes will cost a dollar each and we would urge that our members use them in printing their stationery, etc., to identify them as being members of this association. The steel dies for embossing are also available and cost $7.00 each. We trust there will be a generous response and full use made of this idea.

In handing over the duties imposed upon us to our successors we can only urge that the high standard adopted by the Canadian Lumbermen's Association at its inception has in our hands, we trust, not suffered. Our membership is larger to-day than ever it was and the influence of this association is now most firmly established. But the responsibility rests with each individual member not only to maintain that high standard but on all possible occasions to elevate that standard and let it be known that this association stands for a high moral tone in business life.

Transportation Committee Discusses Rates

Your Transportation Committee has to report as follows:—

In our report presented at the last annual meeting of this association it was pointed out that in addition to the increases in freight rates authorized during the period of the war, first 15 per cent. with a maximum of 1 cent per 100 pounds, that your committee had been advised that the railways would make application for a still further increase of from 20 per cent. to 25 per cent. As you all know, the application was made by the railways for an increase of 30 per cent., subsequently increased to 40 per cent., and after hearing evidence in various parts of the country the board finally decided to allow 40 per cent. of an increase from August 26th, 1920, to December 31st, 1920, and after that date the 40 per cent. increase to be reduced to 35 per cent., this on traffic east of Fort William. West of Fort William the increase was 35 per cent. to December 31st, 1920, to be reduced to 30 per cent. after that date.

In the previous 25 per cent. increase, western rates coming east instead of being subject to the flat percentage increase the territory was divided into zones and 5 cents a hundred pounds increase was the

E. R. Bremner, Ottawa, Ont.
Re-elected Director of C. L. A.

J. Fraser Gregory, St. John, N.B.
Re-elected Director of C. L. A.

George W. Grier, Montreal, Que.
Re-elected Director of C. L. A.

highest increase on through rates from the Coast east. In the order of the board allowing the last increases the flat percentage has been allowed to all rates and there has been no maximum established.

The result of these various increases is that a 10 cent rate prior to the war is now 19½ cents. In other words, rates have been advanced 95 per cent., that is computing the present advance as having been reduced from 40 per cent. to 35 per cent.

These rates are to remain in effect and are subject to revision by the board in accordance with the following paragraph quoted from the order:

"The Canadian Pacific, Grand Trunk and Canadian Northern companies will be required to furnish to this board monthly statements of their operating revenues and, should this board, at any time before July 1, 1922, be of the opinion that a greater or less amount of money is being paid to the railway companies than is actually necessary to enable them to maintain a reasonable degree of operating efficiency, this board reserves to itself the right, at any time, on notice, to readjust the rates to meet the conditions then existing."

The question of the application of percentage increases to western rates has been the subject of a reference to the Privy Council who directed that the Board of Railway Commissioners re-open the case and discuss the question of the eastern and western rates. The position taken by this association with regard to the increase in rates was that we did not oppose an increase as such but that we insisted that if given the increase the railways should improve the service. We were not in a position to say whether 40 per cent. was too much owing to the lack of information, but left it to the board to determine the matter on its merits after taking all the evidence.

Weighing of Cars and Estimated Weights.

The Canadian Freight Association filed Tariff No. 14, covering the weighing of freight traffic effective May 25th, 1920. The Wholesale Lumber Dealers' Association of Ontario have had this matter up and as the chairman of our Transportation Committee is also a member of the Transportation Committee of the Ontario Wholesale, to avoid covering the same ground we left the discussion and adjustment of this matter to them. There are some features about Tariff No. 14, which we think should be taken up by this association as there are a number of points which might possibly work hardship on the lumber industry. For instance, the allowance of 500 pounds for variation in the tare of a car owing to the accumulation of debris, etc., has been absolutely wiped out. Paragraph four of Clause 24 on page 13 reads in part as follows: "Estimated allowances adequate to the actual conditions in each case." But there is no provision as to who is to make this allowance, where or when it is to be done, which means that it will not be done. The provision also for making a charge for the weighing of cars on track scales which also includes a switching charge is a matter which should receive your attention, and the making of a switching charge where weighing or re-weighing is concerned is, in our view, a dangerous proceeding as it may lead eventually to the making of a switching charge where switching may be necessary in addition to the ordinary movement of a car. The estimated weights also contained in this tariff should be subject to considerable revision.

Increase in Export Rates.

Whilst the Board of Railway Commissioners were sitting in Ottawa during August the railways had filed tariffs becoming effective August 20th, 1920, which had the effect of raising rates on lumber for export via Atlantic ports. We did not consider that this was a proper proceeding as undoubtedly the effect of the tariff then filed was to increase rates. The effective date was, therefore, postponed by the board and although there have been several attempts to get together so as to discuss the question with the railways we have been unable to do so owing to one interest or the other not being able to be present. The suggestion now is to meet after the 15th of January and discuss this matter thoroughly with the representatives of the railways.

The Prepayment of Freight.

Considerable discussion has been had on this subject, but inasmuch as the freight on lumber is not prepaid only in exceptional cases we were not very much interested. The question, however, of the payment in United States currency for the Canadian portion of the haul is a matter of principle upon which this association should express itself. The question was before the Board of Railway Commissioners on the 14th December and the board frankly told the railways that they must find some solution of the difficulty. Where members of this association will be interested in this matter is that a regulation calling for the payment of the Canadian portion of the haul in Canadian currency and the United States portion of the haul in American currency it might possibly have the effect of smashing all through rates between Canadian shipping points and American destinations. At the time this report is written the railways were instructed to appear before the board again and if they have not found some solution the chairman announced that he would have some more questions to ask and that he considered "the time had arrived when the railways should give this question serious consideration and early action."

We have received a letter from the secretary of the Montreal Lumber Association in connection with the Montreal Board of Trade asking us if we would discuss the question of asking for a return on the floor of Parliament of the number of passes issued annually to the railroad employees. We would add to this that there should be a further statement as to the amount of money which the transportation thus provided free represents to each of the railway companies in a year. The claim is made by the Montreal Lumber Association that the wages received by railway employees exceed most other branches of labor, and that the present rates of freight are necessary in part owing to this free transportation. The matter is referred to you for your discussion.

The whole position of traffic and operating, as between Canada and the United States is now of such importance and the interests are so interwoven that it seems at the present time as though a joint international railway commission should be appointed to deal with all questions of an international character, whether of rates, operating, prepayment of freight, control of equipment, etc., and we hope a resolution will be introduced covering this point. In support of this position we refer to General Order No. 295 of the Board of Railway Commissioners dated May 5th, 1920, with reference to the complaint of shippers in the prepayment case. To quote from the order:

"It is ordered that, for want of jurisdiction over the subject matter thereof, the said complaints be, and they are hereby, dismissed."

Ocean Transportation and Conditions.

The question of ocean transportation is another feature of this matter which has a most important bearing on the subject. Before the war the United States had a very small merchant marine. It is said that only 7 per cent. of the whole of the exports from the United

States was carried in American ships. It is well known to everyone that during the war the shipbuilding programme of the United States ran into billions of dollars. Ships were constructed at fabulous prices and when the war ended hundreds of United States ships were at sea, hundreds more were being built or were contracted for and in an effort to conserve the vast wealth thus invested the United States Government endeavored to sell the vessels in their own country but the prices asked were apparently prohibitive and the result is that the United States now has billions of dollars invested in expensively built ships which are either tied up to the docks, where they have been for months, or they are making trips at tremendous loss. The imports and exports of the United States for the first six months of 1920 totalled 37,398,184 cargo tons. Of this total United States Shipping Board vessels carried 10,629,060 tons; privately owned American vessels, 12,095,127 tons; and foreign vessels, 14,670,997 tons.

Over against this condition one must take into account the shipbuilding programmes carried on during the war and since by Great Britain and other maritime nations of the world. It is stated that in the British Parliament there are twenty-one shipowners and probably one hundred other members of Parliament who are directly or indirectly interested in the shipping industry; with the United States Shipping Board controlling the tremendous amount of tonnage they do; with the German merchant marine badly crippled and with every nation on earth clamoring for export business, to say nothing of our own Canadian mercantile marine, one may well wonder what the effect is going to be on ocean rates from this time out. We believe this subject is of such vital importance to the whole of Canada that a special study of the conditions should be made with a view to conserving and enlarging the export trade of Canada.

Notes and Jottings of the Convention

A letter was read from John W. McClure of Memphis, Tenn., president of the National Wholesale Lumber Dealers' Association, regretting his inability, at the last moment, to attend. A communication was also received from W. Gerard Power of Quebec, former president of the association, wishing the gathering every success and regretting that it was not possible for him to be present this year.

* * *

George W. Grier of Montreal, wrote that he had been a director for several years and did not wish to stand again. He had been nominated, but desired that his name should be removed from the ballot. No attention was paid to Mr. Grier's communication, and it was decided that his name should remain on the list, as the unanimous opinion was that he was too valuable and enthusiastic a worker to drop out of sight. Needless to say, he was re-elected as a director.

* * *

When the name of John R. Booth, Ottawa, was mentioned by Secretary Hawkins, a great cheer went up. Mr. Booth was invited to attend the dance given by the Ottawa Valley lumbermen at the Chauteau Laurier on Thursday, January 13th. The veteran Ottawa manufacturer, who is now in his 94th year, sent a short note regretting that he would not be able to accept the kind invitation. The letter was in Mr. Booth's own handwriting and showed that he had not by any means forgotten how to wield the pen. He is as active as he was on the last occasion of the Lumbermen's convention in the capital city several years ago.

* * *

The report of the Transportation Committee, which is published on another page, was read by the chairman, A. E. Clark, Toronto, and the report of the Executive Committee, also published elsewhere, was read by Walter M. Ross, Ottawa.

* * *

J. Fraser Gregory of Murray & Gregory, St. John, N.B., Mrs. Gregory and daughter, have gone on an extended visit to England and the south of France where they will spend several weeks.

* * *

W. E. Golding of George McKean & Co., St. John, N.B., has gone on a trip to England and was not able to attend the convention.

* * *

A telegram of congratulation was sent to the Philadelphia Wholesale Lumber Dealers' Association, which body was meeting at the same time in the Quaker City as the Canadian Association was in Ottawa.

* * *

E. F. Perry of New York, former secretary of the National Wholesale Lumber Dealers' Association, who was present at the Quebec convention, was also in attendance at Ottawa, and was accompanied by Mrs. Perry. He conveyed greetings from the National body of the United States, of which several Canadian firms are members.

* * *

The Canadian Lumbermen's Association has adopted and registered a crest of an attractive design. A circle with a dark background contains the words "Canadian Lumbermen's Association." The disc rests upon a log, on which are the words, "Ottawa, Ont." On top of the log is a typical Canadian beaver, while on the inside of the crest appears the maple leaf, on which are placed an axe and a cant-hook. The members of the C.L.A. are being urged to use this crests on all their stationery as it typifies the slogan of the association which is "Co-operation and Service."

* * *

The Canadian Lumbermen's Association now has 180 members, 10 joining during the convention. The newest members are: John A. Story, Story Lumber Co., Ottawa; R. McDonagh, Hart & McDonagh, Toronto; W. F. Oliver, Oliver Lumber Co., Toronto; F. H. Stearns & Co., Montreal; Thomas F. Barnet, Renfrew; G. M. Strong, Montreal; E. R. Safford, A. Sherman Lumber Co., Potsdam, N. Y.

* * *

The report of the Honorary Treasurer, R. G. Cameron, was a most gratifying one and showed the finances of the Canadian Lumbermen's Association to be in a healthy condition. The office furniture and accessories have all been paid for and are written off, not figuring in the statement of assets which show a surplus of about $2,000, and no liabilities. The surplus has been invested in two $1,000 Victory Loan bonds, due November 1st, 1933. The total receipts during the past year were $10,952.45 and cash in bank January 16th, 1920, $713.96. Mr. Cameron was congratulated upon the highly favorable financial standing of the C.L.A.

* * *

It was a most enjoyable and charmingly arranged gathering which was held on Thursday night, January 13th, at the Chateau Laurier, when the Ottawa Valley Lumbermen entertained at a reception, dance and supper party for the delegates to the convention of the Canadian Lumbermen's Association and their wives. The guests of the evening were received near to the entrance of the foyer by Mrs. Dan McLachlin, of Arnprior; Mrs. Arthur Price, of Quebec, and Mrs. Russell Blackburn, of Ottawa. Lady Egan, who was also on this committee, was unable to be present. Dancing was enjoyed, the choice music for which was provided by an euphonious orchestra. Supper was served at eleven o'clock in the main dining hall, the tables being adorned with cut blooms.

* * *

The membership of the Canadian Lumbermen's Association last year was 146. To-day the membership is 180, and still growing.

* * *

W. J. MacBeth, of Toronto, told of a most interesting case. In 1884 he and Mrs. Macbeth—she was not then Mrs. Macbeth—walking in the woods, cut a small balsam shoot with a jack-knife and planted it. The tree is now 80 feet high and 20 inches through in the stock.

Much merriment was created when A. C. Manbert of Toronto whimsically interjected "No wonder! that tree was planted under most auspicious circumstances."

* * *

With that new gold wrist watch, presented to him by the association, Treasurer "Bob" Cameron will, no doubt, bring some of the delinquent members "to time."

* * *

Secretary Fred Hawkins lives in Ottawa, South—at least that is his home—but for several days before and after the convention, his headquarters, and those of his wife, were at the Chateau Laurier. Mr. Hawkins was such a busy man that he could not run his furnace, his house and his official duties at the one and same time, so he engaged a man to stoke his furnace and closed up his domicile and migrated to the Chateau, where he was on the job every minute.

* * *

President Dan. McLachlin and Mrs. McLachlin spent the month of January at the Chateau Laurier in Ottawa. After the convention Mr. McLachlin took a couple of weeks' holidays in the capital city. where he is a member of the clubs and is fond of outdoor amusements. He made an admirable presiding officer and kept things operating smoothly. There was not a hitch in the proceedings nor a lifeless moment from the beginning to the end of the gathering.

* * *

Some of the delegates from the East thought Ottawa would be a rather cold place and were altogether disappointed. There was an abundance of snow in the capital city and even a Snowfall in the convention room.

Resolutions Adopted by the Canadian Lumbermen

A number of important resolutions were presented and adopted at the thirteenth annual meeting of the Canadian Lumbermen's Association in Ottawa. They were as follows:

WILL FIGHT ANTI-SHINGLE LEGISLATION

Moved by A. C. Manbert, seconded by A. E. Clark—That having heard the report of the Executive Committee on the subject of the use of wooden shingles being prohibited within the province of Ontario, we desire to go on record as being distinctly opposed to the unfair and unreasonable recommendation made by the Ontario Fire Prevention League, in a resolution contained in an address by Mr. J. B. Laidlaw and adopted at the second annual meeting of the Ontario Fire Prevention League, calling for provincial legislation, prohibiting the use of wooden shingles for roofing purposes.

Resolved that this matter be referred to the Legislative Committee for thorough investigation; that they co-operate with all the interests opposed to this proposal and effectively protest any legislation attempting to restrict or prohibit the use of wooden shingles.

NO INCREASE IN COMPENSATION RATES

Moved by H. I. Thomas, seconded by J. Fraser Gregory—That this Association is opposed to any increase at the present time in the rates of compensation under the Workmen's Compensation Act of Ontario; also to any move looking to the introduction at the present time of any legislation establishing Old Age Pensions or Unemployment Insurance in Canada for the following reasons:—

1. That the rate of compensation and the treatment of employees in Ontario is more generous than that accorded in any other country.
2. That the general trade conditions and the particular critical state of affairs in the lumbering industry are such that any additional burden upon employers at this time would be unwise and possibly disastrous.

This Association is also of the opinion that before any change in the personnel of the Workmen's Compensation Board is made, or any appointments made to the Board, the employers in the lumbering industry who are amongst the largest contributors to the funds of the Board, should be consulted and given an opportunity of presenting their views.

This Association expresses its appreciation of the action of the Board in furnishing to the employers detailed statistics of the payments into the funds and compensation granted therefrom; also for the statistical accident records furnished and desires to impress upon the Board the desirability of continuing and bringing up to date these statistics and generally of publicity in connection with all the workings of the Compensation Act of Ontario.

That a copy of this resolution be sent to the Prime Minister of Ontario and to the Chairman of the Workmen's Compensation Board.

THE TARIFF AND CANADIAN INDUSTRY

Moved by A. C. Manbert, seconded by D. Champoux—That the Canadian Lumbermen's Association commends the action of the Government in holding hearings throughout the Dominion in an endeavor to obtain information regarding the fiscal Canadian customs tariff as will make it more scientific in construction and application, with the purpose of reducing to a minimum the hardships of its incidence and at the same time having due regard to the greater development of Canadian Industry.

We further recommend that the Government should issue a public statement at as early a date as possible, showing all classes of goods imported into Canada—quantity and value—with a view to promoting public sentiment that will discourage the importation of unnecessaries and luxuries.

Be it further resolved that a copy of this resolution be forwarded to Sir Henry Drayton, Minister of Finance.

NECESSITY OF STABILIZING TRADE CONDITIONS

Moved by W. B. Snowball and seconded by F. N. McCrea. M.P.—In view of the necessity of greater production and a reduction in cost to fully stabilize trade conditions in Canada.

Resolved that the Canadian Lumbermen's Association impress upon the Government the necessity of guarding carefully against any legislation that will shorten the present day's labor and thus reduce production; also the Canadian Lumbermen's Association suggests that the Department of Labor impress upon manufacturing interests and labor organizations the importance of working harmoniously together to accomplish these results, and that a copy of this resolution be forwarded to the Hon. Gideon Robertson, Minister of Labor.

NO RE-ENACTMENT OF EXCESS PROFITS TAX

Moved by W. B. Maclean, seconded by W. E. Bigwood—Whereas the Excess Profits Tax had expired by limitation and whereas it is universally recognized that this tax is unsound in principle, inequitable in application and destructive to individual initiative, and has no possible justification except as an extreme war measure, which now has passed.

Resolved—That the Canadian Lumbermen's Association, in convention assembled, is unalterably opposed to its re-enactment as being generally detrimental to the return of business to those normal conditions which are absolutely essential to national wellbeing and productive development; and be it further resolved that copies of this resolution be forwarded to Sir Henry Drayton, Minister of Finance.

THE INSURANCE OF LUMBER STOCKS

Moved by A. E. Clark, seconded by J. Fraser Gregory—That in view of the action of certain insurance companies or the Canadian managers of same, seeking to influence provincial or other legislation looking towards the adoption of laws inimical to the best interests of those engaged in the lumber trade, it is recommended to the incoming Executive Committee that they obtain full information from all non-tariff insurance companies as to their attitude regarding insuring of lumber, etc., so that such information may be given to any member of the Association who desires to use insurance in non-tariff companies.

GETTING AFTER DELINQUENT MEMBERS

Moved by R. G. Cameron, seconded by Walter M. Ross—That inasmuch as subscriptions to this Association are payable in advance, and, in a number of cases our experience in the past has been that this matter has been either overlooked or neglected, and, in some cases, payment has been refused although members have been carried and have received all the services of this Association during the year, and, at the end of the year, have repudiated the account or resigned, we move that, on all subscriptions not paid by March 1st, the honorary Treasurer be authorized to pass sight drafts, after duly notifying delinquents of his intention to do so if not paid by that date.

THE PASSING OF MR. WILLIAM POWER

Moved by Hon. Gerald V. White, seconded by Hon. George Gordon—That the Canadian Lumbermen's Association at this annual convention in Ottawa desire to express their sympathy to the family and relatives of Wm. Power, of Quebec, who died recently at his home in that city. Mr. Power was a valued member of this Association and well known to a great many of our members and his active and general business experience will be sadly missed by our meetings.

Be it resolved that, this resolution be entered on the minutes of this convention and also that a copy be forwarded to the widow and family.

HOSPITALITY OF OTTAWA VALLEY LUMBERMEN

Moved by A. E. Clark, seconded by G. E. Spragge—That the thanks of the Canadian Lumbermen's Association are due to the Ottawa Valley Lumbermen's Association for their splendid entertainment and hospitality.

Moved by R. G. Cameron. seconded by W. M. Ross—That owing to conditions arising whereby the date of the annual meeting has to be either put forward or backward, it is advisable in the interests of the Association to close the books on December 31st in each year instead of January 15th, as at present.

Exorbitant Freight Rates Severely Criticized

Canadian Lumbermen Denounce Heavy Increases in Transportation Charges and Decide to Inaugurate Traffic Bureau—Expert will be Placed in Charge

In connection with the report of the Transportation Committee by A. E. Clark, he stated that the attitude of the railway commissioners was to allow the road any increase asked without the roads justifying such increase. When a new rate was applied for, it was assumed the increase was justified instead of making the roads prove their case.

The railwaymen were the most overpaid body of men, Mr. Clark stated, in the entire country. One government line was run extravagantly and the people paid for it. In his opinion, with the government owning half the railway mileage of the country, the Board of Railway Commissioners' usefulness was past.

E. R. Bremner suggested the appointment of a permanent traffic officer of the association.

W. B. Snowball said that the increased freight rates had brought to an end the shipping of lumber in the East. Men who had ordered lumber previous to the order were letting it lie in the yards of the wholesalers.

Gordon C. Edwards thought that the lumbermen should affiliate with other influential shippers in order to make their wants and the necessities of the trade known and obtain effective relief. He favored a traffic expert for the association.

High Freight Rates Severely Scored.

Mr. Clark stated that the original railway act read that the onus of proof for the necessity of increased freight rates rested upon the railways. The Board of Commissioners had assumed that if application was made for an advance in charges, it was correct, without the roads showing a just cause. New rates were often filed two or three days before they became effective and the lumbermen and other interests were not afforded an opportunity by the board of opposing the increase. The fight against increased freight rates was not one that should be fought out alone by the retailer and wholesaler, who were not receiving proper sympathy from the large manufacturer, who sold his product f.o.b. mill. The responsibility of the manufacturer should be as great in this matter as that of the other branches of the industry. Railway employees were the most overpaid of any class in the country. The railways said they had to pay the high wages, but, in the opinion of the speaker, it was not the business of Mr. McAdoo to tell Canadians what they should pay. As a result of the excessive freights lumbermen were getting less for their lumber than they should. The recent forty per cent. advance was altogether too much. The price of lumber depended on the services and rates furnished by the railways.

One road was run by the Canadian Government extravagantly and was losing money, while the other, on similar charges, was making money. This showed that the freight rates were far too high. There was need of some more efficient way of supervising the railways than the present Board. When appeals were made to the Canadian Freight Association, they intimated that they could not do anything because the Board had already passed judgment on the matter. Some solution must be found for taking care of the freight rate situation and he favored strongly the appointment of a traffic bureau by the association and the engagement of an expert.

While the old rates had been increased 95 p.c., the railways had introduced a number of regulations of their own, regulations they had no right to introduce, which really increased the old rates, he estimated at about 1.50 per cent.

A E. Eckardt spoke along similar lines and said that what effected the retailer and the wholesaler also effected the manufacturer, who often sold his lumber f.o.b. mill and was not so much concerned in the matter of distribution and rates as he should be. He stated that an amendment, which was desired to tariff 14 in regard to the responsibility for scaling, was that if the delivery agent was unable to give the consignee scaling particulars of a car that had originated at a track scale station or has passed en route a track scale, the railway company must accept payment of freight on the basis of minimum weight, the railway companies to have the right to make amended claim as soon as scaling particulars are ascertained. If this amendment was put through most lumber companies could do with less office staff as the majority of the claims presented arose in connection with scaling. When claims were put in, there were many long waits before getting the refunds.

Mr. Eckardt advised manufacturers not to accept in their yards cars which often contained sand, refuse or manure to the depth of several inches as then time was taken up in getting a rebate from the road. Such cars should be refused.

Another thing which the speaker referred to, was when a shipper asked for a car, it was supposed to be a standard car, and if the railways did not have one they would send in a forty foot car instead of a thirty-six foot one. The former would not carry any more lumber, yet the receiver of the shipment was forced to pay for the extra weight owing to the length of the car. All agents would collect on the larger car, with the result that the consignee had to put in claims.

Another matter was that the established weights on lumber were too high and some procedure should be taken. In regard to belated freight claims made after a consignee had settled with the roads—where the amount collected was not as much as it should have been—while we have been asked by the railway companies to pay we have never done so and do not intend to do so, concluded Mr. Eckardt.

W. E. Bigwood stated that the C. L. A. had got past the creeping stage and was now firmly on its feet. It was time the association took hold of traffic matters and appointed an expert to get the work done.

Aggressive Action the Watchword.

George H. Holt, of Chicago, endorsed the appointment of a traffic manager and it was necessary in his judgment for the association to have an expert to meet the railway interests who always had cards up their sleeves in the matter of charges and freight rates. A man should be secured with the necessary time, tact and experience, as it was the only way to meet the solidarity from the other side. He also favored joint action with other associations. "We should inquire if the rate on lumber is a fair one when compared with that on other commodities. The lumbermen furnish the yard and the labor and there are no warehousing charges on lumber the same as on other commodities."

E. C. Parsons stated that fully sixty per cent. of the shipments from British Columbia consisted of lumber and he supported the appointment of a traffic man.

A. C. Manbert stated the increased freight rates was the vital problem of lumbermen. The Board of Railway Commission was composed largely of professional men who were not experts in the technique of industry.

C. H. Belton, A. H. Campbell, and C. A. Spencer all favored the project on a traffic department.

S. E. Copping, of Joliet, Que., remarked that the present freight rates were "conceived in iniquity and born in sin," and a strong man was needed for the position.

A committee of A. C. Clark, A. C. Manbert, W. B. Snowball, S. E. Copping and E. R. Bremner was appointed to bring in a report on the matter of a traffic department.

Traffic Bureau Strongly Supported.

A. E. Clark reported on behalf of the special committee to inaugurate a traffic department that such a bureau should be established and that a traffic manager be engaged, the details of the financing in connection with the matter to be left in the hands of the incoming executive.

To engage a competent and efficient man such as would be required would mean considerable additional cost. The committee was not prepared to recommend any increase in the fees of members, but was sure that the incoming board would have the co-operation of the Association in mapping out some feasible plan.

President McLachlin asked for a full expression of opinion, as this was one of the most important matters which had come before the Association in a long time.

W. B. Snowball stated that a traffic bureau and officer were necessary, and he moved the adoption of the report presented by Mr. Clark. Personally, he might say that his mill shipped most of its product by water as their natural customers were in the English and the foreign markets. Nevertheless he felt that a traffic manager was one of the real essentials of the C. L. A. While such a department would mean greater contributions in fees, he felt that the returns secured would more than offset the extra expense. Some might say they have no claims or matters to redress with the railways, yet he felt that the

appointment of a traffic expert would be of direct benefit to all in the association. The proposition was going to have his hearty support and his firm was prepared to pay its proportion.

E. R. Bremner said that he could but reiterate what Mr. Snowball had said. He felt that the association had come to the stage where it was large enough to stand behind such a move and warmly support it. The executive should be given power to go ahead and work out the plan on a proper basis.

W. E. Bigwood seconded the motion for the adoption of the report.

A. C. Manbert added that such a department was a definite recognized activity in association work and should receive as much attention as anything that came before them. It would enlarge the usefulness and service of the organization. Manufacturers did not yet realize how their sales could be increased by better transportation.

E. F. Perry, of New York, former secretary of the National Wholesale Lumber Dealers' Association, said that some fourteen years ago the National Association saw the need of a traffic department and two years later had established one. He added that a certain sum was appropriated annually by the association and there was a sliding scale of fees based on shipments made by the various members of the association. The railway situation was becoming more important every day to lumbermen in the matter of shipments and increased freight rates. "We do not fight the Inter-state Commerce Commission nearly as much as we work with them in our traffic department. You are proceeding on right lines and, as your market gets broader for lumber, you will need help from some central body and such an appointment is necessary. We do not put forth trivial claims or demand something that we are not entitled to from the railways. The result is that when we take a matter up we receive attention and consideration. In Mr. Phippen, our traffic manager, we have a splendid man and when your executive takes this matter of a traffic department up, we will be pleased to send Mr. Phippen over here in order that he may give you all the advice and suggestions that he can," concluded Mr. Perry.

President McLachlin thanked Mr. Perry for his kind offer and said they would take advantage of it.

The resolution in favor of establishing a traffic department and leaving the details to the new executive was then carried unanimously by a standing vote.

The Demands of Labor Denounced

A. E. Clark brought up the question of an amendment which labor intends to have made to the Ontario Workmen's Compensation Act at the next session of the legislature. Workmen, he said, were going to ask that the act be so amended that an injured workingman be paid 100 per cent. of his wages, instead of 66 per cent. as now. Mr. Clark qualified the suggested amendment as "utterly ridiculous." It was high time that sane men should get together to take action. If industry continued to be loaded up in this manner, with overpaid railway employees, where would business come out? Mr. Clark then dealt with taxation. Everyone, he stated, knew that Canada was taxed to death, more so, in fact, than Great Britain or the United States. In these two countries it was possible to earn seven per cent. in money, but such a thing was not possible in Canada.

In the discussion on the proposed amendment to the Ontario Workmen's Compensation Act, and the effect such legislation would unreasonableness of labor in certain instances, it was decided to appoint a committee to report on the proposed amendment to the Workmen's Compensation Act, and the effect such legislation would have on industry. The members of the committee are Messrs. H. I. Thomas, purchasing agent of the J. R. Booth firm; W. E. Bigwood and G. A. Spragge, of Toronto.

Francis McCrea, M.P. for Sherbrooke, said the labor situation had been a vexed one in the last couple of years, and labor had taken advantage of it. There was a tendency to work less and demand shorter hours. He had not much sympathy for an able-bodied man agitating for shorter hours than those prevalent to-day. Mr. McCrea expressed the opinion that no man could carry on the lumber industry if the hours of work were further reduced.

Mr. McCrea suggested that a resolution urging that railway employees, miners and others should do a little more work for the money they were receiving, be adopted. His suggestion was accepted to the extent that a committee was appointed to draft such a resolution.

J. B. Snowball said he was not opposed to labor unions in Canada. He was, however, opposed to affiliation with outside organizations. He believed there would be far less labor trouble in Canada if Canadian unions were not affiliated with international organizations. He believed there should be legislation against outside affiliation.

A. E. Clark suggested having Hon. E. C. Drury, premier of Ontario, who was in Ottawa, be invited to be present when representations in regard to wooden shingles and other legislation could be made.

President McLachlin said Mr. Drury had already been invited to the convention, and had promptly declined.

Anti-Shingle Bill Will Be Fought

Mr. Hawkins brought up the matter of the proposed legislation in regard to prohibiting the use of wooden shingles in Ontario, growing out of the attack on shingles by J. B. Laidlaw, manager of the Norwich Union Fire Insurance Co. It is understood that the contemplated legislation would prevent shingles from being used on roofs on any new buildings hereafter to be erected nearer than 50 feet to an existing structure, and also the same regulation would apply to distance in regard to all cases of extensive repairs.

W. E. Bigwood stated that all lumbermen were vitally interested in opposing the legislation. Many of the statements made by Mr. Laidlaw were unfounded and misleading, and shingles had not been the cause of nearly as large a number of fires as alleged.

W. B. Snowball stated that New Brunswick was very much interested in seeing the proposed legislation defeated. "We send the best cedar shingles up to Ontario," he added, "and we do not want to be debarred from that market." An agitation had been started in the United States some time ago along similar lines, and prohibitory legislation had been passed in a number of centres which had subsequently been rescinded, and more shingles were being sold across the border than ever before. Mr. Snowball added that no cover was equal to the cedar shingle in the residential districts for comfort, convenience and durability.

E. C. Parsons also spoke along the same lines and defended the B. C. shingles against the allegation that they were a fire menace. Thicker shingles were being adopted and no sparks would be able to get under them.

J. C. Bartram said when he was a boy there was a regulation, requiring shingles to be laid in mortar. He thought in the congested districts this would answer as a fire precaution.

President McLachlin said that no doubt the proposed legislation in Ontario against the wooden shingles was being watched by other provinces, and he believed that every effort should be made to see that the bill was withdrawn.

George H. Holt, of Chicago, defended the use and durability of the wooden shingle. The hazard from them was very small compared with other causes of fire. He pointed out that legislation against the use of wood shingles had been withdrawn in a number of cities because there was no roofing to compare in the economic value with the shingle roof. He added that there were twelve billion roofs in the United States and it is estimated that 90 per cent. of them were covered with shingles. Those on his own house in Chicago, where his father had also lived, had been there for sixty years.

Horace Boultbee, of Toronto, secretary of the Wholesale Lumber Dealers' Association, Incorporated, and of the Ontario Retail Lumber Dealers' Association, stated that they were looking into the matter and would aggressively oppose any proposal to do away with the wooden shingle roofs. If any such legislation as proposed carried, it would greatly decrease activity of the building trade, particularly at a time when the whole world was looking for lower costs in construction.

Action was taken on the question in the shape of the C.L.A. passing a strong resolution which will be found on another page.

Uniform Grading Rules Left in Abeyance

In the matter of uniform grading rules, A. E. Clark stated this was a very serious question, and he thought it should be left over for future consideration.

There was a reference in the executive report to the advisability of the C. L. A. formulating and adopting such rules, and also a letter from the Canadian Standards Association asking the C. L. A. to nominate one of the members to the committee having in charge the contemplated preparation of specifications for wood poles for transmission lines.

In connection with the latter Secretary Hawkins explained that a committee from both sides of the House of Commons had been asked to take up the question of standard poles. The buyers and sellers had not been able to agree upon any standardization of telegraph and telephone poles.

After some discussion the following were appointed representatives from the C. L. A.:—F. X. Plaunt, of Ottawa, as the Ontario representative, and W. F. Napier, of Campbellton, N.B., for the East. A representative will be appointed by the C. L. A. executive for the West.

J. Fraser Gregory, in regard to the matter of uniform grading

rules for lumber, said that he was in favor of such a move. He thought a uniform log scale would also be advantageous to the industry. In New Brunswick the act was antiquated and the log scale was not fair to the millman and the buyer, and would have to be revised sooner or later. He thought it would be advisable to appoint a committee to see if uniform log scale and lumber grading rules could not be agreed upon.

President McLachlin remarked that, during the war, it was discovered in North America, there were fifty-two distinct rules for measuring sawlogs, all of which were in use somewhere and no two rules were alike.

After some further discussion the matter of uniform grading was left over for consideration at some future date.

In the discussion on the expiration of the Excess Profits Tax, which has expired by limitation, A. C. Manbert remarked that the tax had served its purpose and should not be reimposed. No suggestion should be offered of what should take its place, as the department of finance had shown no marked disability to find what they wanted in the way of income. The excess profits tax had been adopted only as a temporary measure. In his opinion the sales tax and the income tax had taken up all the slack and were now the direct means of obtaining revenue.

Walter M. Ross also thought no suggestion should be offered the finance department and added that the excess profits tax should not be reimposed, as it had served its purpose.

Z. Mageau, M.L.A., thought a resolution should be passed in connection with the Ontario Workmen's Compensation Act and proposed changes thereto, in order to define the lumbermen's position. A strong effort would be made this year to increase workmen's maximum compensation from the present 66 2/3 per cent. to 100 per cent.

Paying Additional Freight Charges

John B. Smith & Sons, Toronto, wrote Secretary Hawkins as follows: "One thing which may be brought before the Association is in reference to railways asking shippers to pay additional freight on bills. It may be a long time since the car came in. The cars may have originated in almost any state of the Union or British Columbia, New Brunswick or Quebec, and they will ask you to pay. It may be $1.00 or $2.00 or it may be $200.00 or $300.00.

"These cars are almost invariably bought at delivered prices and, in our own particular case, as soon as we unload a car from the United States, we pay for it, deducting the freight, and then when additional freight is asked, we refer them to the shipper. In some instance the shippers have gone out of business since the car was shipped. In other instances the shipper will pay the difference, as they properly should, and in still other instances the shippers are 'n. g.' Then the railways will come back and demand that we pay freight irrespective of the fact that it is a direct loss.

"We think such a matter as this should be brought up before the Railway Board and that present conditions should be altered. We had a case in buying a few months ago, where the man from whom we had bought a carload of shingles for quick delivery, said he had it en route, and we took the shingles when they arrived. The freight on them was $300.00, and after a month or two, the railway came back with a corrected bill and said there was another $300.00 or thereabouts, and we referred them to the shippers. The shippers paid no attention to their request, and they came back to us and said "Pay or we will put the matter in courts."

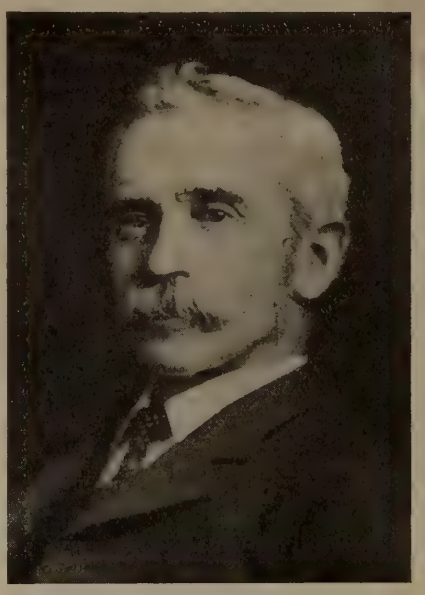
"Now these things should not be and there is something wrong about them."

Practical Benefit of Reforestration

Illustrating the benefits of reforestation and the record of growth of a balsam poplar tree, President Dan McLachlin furnished an interesting illustration in this respect. He said that, according to the information supplied by Armon Burwash, superintendent of McLachlin Bros.' mills at Arnprior, Ont., this particular balsam poplar grew in a mixed bush of poplars, ash, soft maples, elms and the customary under-wood in a swampy spot, in the lumber yards of McLachlin Bros. The entire grove covered about eight acres of ground. Several other poplars grew around the same spot as the one referred to, reaching a diameter of from 20 to 25 inches, two feet from the ground. The land upon which these trees grew was cleared absolutely of all trees and underbrush of any kind under the supervision of Mr. Burwash in the autumn of 1870. The tree was felled in December, 1920, and produced three saw logs, two of them 16 ft. long and the top log 12 ft. long, 14 in. in diameter at top end. The wood in the tree was sound, without sign of rot anywhere. The growth was as follows:

1897 to 1902	19¾ in. diameter
1902 to 1907	21¾ in. diameter
1907 to 1912	23¾ in. diameter
1912 to 1917	24¾ in. diameter
1917 to 1920	25½ in. diameter

Cancelling of Orders Are Too Frequent



W. K. Grafftey, Montreal

At the Canadian Lumbermen's Association meeting in Ottawa, W. K. Grafftey, of Montreal, moved the following resolution: Whereas the canceling of orders, if performed in an arbitrary way, without consulting the interests of the seller, may cause not only much in convenience but loss to the seler, be it resolved that any order booked and acknowledged covering a sale and purchase of lumber, if not cancelled before two months from date of order, shall be considered as binding and after that date can only be cancelled by consent of the seller.

In explaining the purpose and importance of his motion, Mr. Grafftey said:—

Feeling sure that any question bearing on the general operations of our business will receive the careful attention of the convention, I wish to bring before you the subject of "Cancelling of Orders."

Any method of doing business, which is weakening in its effect, has surely some remedy at hand, and any method that disturbs in any way the confidence and esteem that should exist between each other should, as far as possible. be taken into consideration. Especially during the past few years, changes have come so quickly, and ordinary plans so often upset that one hardly knows where one is.

Reasonable causes for cancellation will always exist and every possible leniency can be offered to meet the wishes of the buyer and generally speaking, this is the wise course to follow. Yet, what I am now especially referring to, is what I should term "Arbitrary Cancellation." I acknowledge that cancelling is a privilege to be used, and yet not abused. Such remarks as "Necessity knows no law," "Self-protection," etc., are not workable in the presence of the Golden Rule, which we are so fond of quoting, and which should not be overlooked.

Such conditions as we have had lately, and through which we are now passing, demand the closest possible relationship between seller and buyer. In my experience—and I doubt not but many in the room have had a little experience—during a rising market, how exacting customers are to insist upon every foot of lumber being delivered, and yet. when a period of decline in prices exists, letters come in, thick and fast, cancelling orders in the most arbitrary way, stating, as a reason that trade has fallen off.

An order booked and acknowledged, may not have the same weight as a carefully drawn up contract, and yet, I think that more recognition should be given than is at times, given to it; ever ready to make all reasonable allowances for the stress of the times, yet with a limit, that disturbance of feeling and inconvenience of financing may be as far as possible eliiminated.

There are many forms of cancellation, some more drastic than others, but allow me to cite one illustration. The wholesaler will buy, say in the month of July, a quantity of lumber from the mill, turn it over to the sales department who find a ready sale and the orders are booked and acknowledged. with terms of final settlement of any unshipped balances on December 1st, following. With this satisfactory condition he goes into the market again and purchases a duplicate lot. About two weeks before settlement date, arbitrary cancellations of orders come in thick and fast, and what he was depending on to finance his business has been removed and he finds himself with a double load, unexpected and unwarranted. There are other forms of cancellation even more drastic than the one mentioned.

My one purpose in mentioning this matter is to improve conditions as they exist, and place a better recognition on orders by the buyers, that reasonable justice may be done to all. Regulations must lie on the merits of each case.

A short discussion followed in which one member stated that he thought the time for passing such a resolution as proposed was passed as practically all orders that were likely to be cancelled, had already been cancelled. A contract was a contract and every effort should be made on the part of both buyer and seller to carry it out. In his opinion there was no necessity of giving two months leeway. A resolution was not needed at the present time.

There being no seconder to the motion of Mr. Grafftey the matter was dropped without further debate.

Brilliant Social Event was Annual Banquet

Nearly Five Hundred Guests at Festive Board—Ministry of Wood Eulogized—Federal Ministers Deliver Stirring Speeches—Scene of Splendor and Beauty

The annual banquet of the Canadian Lumbermen's Association, which was held at the Chateau Laurier, Ottawa, on Wednesday, January 12th, was a brilliant social function, attended by nearly 500 guests. The ladies were present in large numbers and the decorations were artistic and attractive. It was the most notable and representative assembly in the forest products line ever held around the festive board in Canada. The addresses were thoughtful, earnest and eloquent, and the spacious dining room of the Chateau never presented a more gala spectacle. The menu provided was fully up to the high standard set by this nationally-known hotel.

The speakers were the Right Hon. Sir George Foster, Minister of Trade and Commerce; Hon. Sir Henry Drayton, K.C., Minister of Finance, and Hon. Gideon Robertson, Minister of Labor. The oration of the evening was delivered by Sir George Foster, who was in splendid form and his well-rounded periods aroused his hearers to a high pitch of enthusiasm. The applause was frequent and the loyal sentiments of the Minister of Trade and Commerce found responsive echo in the heart of everyone.

The chairman of the evening was Dan McLachlin, of Arnprior, president of the Canadian Lumbermen's Association, and on his right was seated Sir George E. Foster, the guest of honor, and on the left Sir Henry Drayton and Senator Robertson. Others at the head table were George W. Grier, Montreal; W. B. Snowball, Chatham; Alex. MacLaurin, Montreal; Z. Mageau, M.L.A., Sturgeon Falls, Ont.; W. E. Bigwood, Toronto; Sir Henry Egan, Ottawa; Spencer Kellogg, Utica, N.Y.; J. Fred Booth, Ottawa; A. C. Crombie, New York; E. H. Lemay, Montreal; E. F. Perry, New York (vice-president of the National Wholesale Lumber Dealers' Association); J. Fraser Gregory, St. John; A. L. Dawe, Montreal (secretary of the Canadian Pulp & Paper Association), and others.

While the dinner was in progress, Mrs. H. S. Binks, Ottawa, sang two selections very sweetly, and several lively choruses were rendered. Lady Foster was among the ladies present and shared with her distinguished husband in the applause of the banqueters.

After the toast to the King had been loyally honored, President McLachlin opened the post-prandial proceedings in an interesting address, in which he said: In holding our convention in Ottawa this year after meeting last year in Quebec, we are following the natural course of the lumber industry which moves ever westward. And while we freely grant the claim of the ancient city that it is the cradle of our industry, it is in the Ottawa Valley that we passed from the cradle stage to vigorous manhood.

Over one hundred years ago the pioneer lumberman of the valley, Philomon Wright, came up the Ottawa and settled at the mouth of the Gatineau. That was the commencement of the unfailing supply of timber that has ever since come down our river. First the rafts of magnificent square white pine, then saw logs as the demands of commerce changed, and now the saw logs are augmented by vast quantities of pulp wood on its way to the paper mills, to become the daily papers that serve us the news of the world. The value of the timbers carried by the lumber rivers annually is no mean part of Canada's trade. Silently by wind and current the logs come down the narrow streams, with small tow boats on the larger lakes, on their way to the markets of the world.

The Great Ministry of Wood.

The importance of wood to a civilized community is perhaps not fully realized by many to whose daily comfort it so ably ministers. It is the one material other than food that is indispensible to mankind. The hardy mariners who first crossed the Atlantic did so by the grace of the lumbermen of that day. The importance of wood has increased, not diminished with time. Go into the deepest mine and the miner works there in safety because wooden pit props hold the rocks securely above him. Travel far and fast in the safety and luxury of modern railway trains and your security depends on wooden ties. Go above the clouds in an airplane and a wooden propeller draws you along in a machine built around a wooden frame. From the match of a smoker to the exquisite furniture of milady's drawing room, wood is our chief material for use and luxury. Unlike coal and metals which cannot be reproduced, our wood supply can and is being replenished by intelligent care that an unfailing supply may serve us forever.

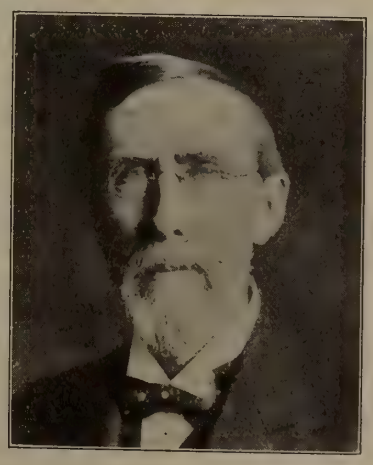
The old time wasteful methods are gone from our industry and the huge refuse burners that strike the casual observer as the dominant feature of a sawmill, are really monuments of a bygone day, and the mere wisp of smoke that now trails from them, is the unredeemable waste which is but a tithe of the refuse they were originally designed to consume. To-day sawdust is used for fuel and no bit of wood that will make a picket sixteen inches long or that will make a lath is now allowed to reach the burner. The demand for lumber products to-day makes it possible to use the material that formerly went to waste and I hope that the chemical world will soon produce a process that will utilize the small quantity of refuse we now have to destroy.

Canadian timbers have always engaged a most favorable place in foreign markets, meeting open competition without fear in the timber ports of the world.

But foreign ports are the care of the Minister of Trade and Commerce and I must leave them to him. In calling on Sir George Foster to speak to us, I do not feel that I am introducing him to you, but rather announcing an old and valued friend of our association.

Sir George Foster was cordially received and, after some pleasant-

Hon. Gideon Robertson
Minister of Labor for Canada



Sir. George E. Foster
Minister og Trade and Commerce Who Delivered the Oration of the Evening

Frank Hawkins
Secretary of Canadian Lumbermen's Association

ries at the expense of his colleagues in the cabinet, referred to the great mission of lumbermen as missionaries. In graceful terms he described the growth from sapling to tree and then the manufacture of the wood into lumber or pulp and paper. As paper the mission of wood was to carry the gospel to the heathen, the message of commerce to the uttermost parts of the earth and the message of love to young and old alike.

Speaking of his visit to Geneva, Sir George said he was glad to be at home again. After the turmoil of the harassed European cities it was good to return to the comparative calm and peacefulness of Canada. "There is a little taste of discontent in this country," said Sir George in a jocular vein. "My friends Robertson and Drayton know it as members of the best Government Canada has ever known, but nine-tenths of the discontent we have comes to us as a direct legacy of the war."

It was easy for the Canadian people to be optimistic and buoyant while the war was on and to come together for a common cause, forgetting their individual difficulties and troubles. but the same spirit necessary at that time was equally necessary now for the legacy of the war was still with us.

"Leaving the harassed old world and coming to Canada," he continued, "I cannot but feel that if Canadians could but glimpse at the sufferings of the people of the old world they would thank God that this country is their heritage and abode."

The first assembly of the League of Nations at Geneva he characterized as an unique assembly, where 104 representatives of 42 nations, afterwards 48, met and for five weeks labored to bring order out of world chaos and to put in motion the great machine of the League of Nations, which in time would renovate the method of settling men's disputes by substituting the spirit of justice and equality and calm reason for the gun, the dirt and the explosive.

The delegates to the league buried their individual desires for the good of the whole and, although opinions were freely and fearlessly expressed yet there was not one occasion where the league was not unanimous in reaching its conclusions. The session was a splendid justification of the hope of the founders of the league and a striking evidence that the moral force of the world was solidly behind the propaganda of universal peace.

Speaking particularly of the Canadian delegation to the league, Sir George said that while his colleagues were absent he could not not throw bouquets at them and he feared if he threw bouquets at himself he would blush. but speaking as far as an onlooker could, he would say the Canadian delegation stood up well with the others. The value of its work would have to be told in the history of the future.

In conclusion, Sir George said: "If we fail in the future, if the furrow is not ploughed to the end, if the harvest is not gathered, if the sun does not shine upon a land of unexampled prosperity, happiness and contentment, it will be because the Canadian men and women of to-day have not done their duty, but this I cannot think of. I cannot think of the future which I shall not see but which many of you here will live to enjoy without seeing a Canada standing among the nations of the world, a chosen people, a shining example of a civilization which has purity and uplift as its watchwords."

Round after round of cheers and applause greeted Canada's veteran statesman at the conclusion of his able address.

Canada's Minister of Finance.

Sir Henry Drayton congratulated the association upon having Sir George as its guest. "Isn't it good to have him back with us again and with new laurels. Let us give three cheers for the laurels," said Sir Henry and again the rafters rank with laughter and cheers.

Speaking as Minister of Finance Sir Henry said he felt like an impecunious man standing amongst representatives of an industry running into the hundreds of millions of dollars, but in his official position he continued to say that he gazed with avidity upon the great lumbering industry as one of the untapped sources of wealth. There was cause for some little worry in the balance of trade against Canada and the depreciating currency. He could think of no economic reason why Canadians should send their money to the United States so it must be because Canadian people had such an affection for their southern neighbors.

The lumber industry had developed in Canada, and this Sir Henry emphasized by the statement that in 1914 the lumber exports were $42,000,000, while in seven months of 1920 they reached $80,000,000. The lumbermen were doing their best to reduce the adverse balance of trade. He referred to the excellent relations which always obtained between Canada and the United States, and said that the only time he was reminded there was a boundary was when some question of tariff arose.

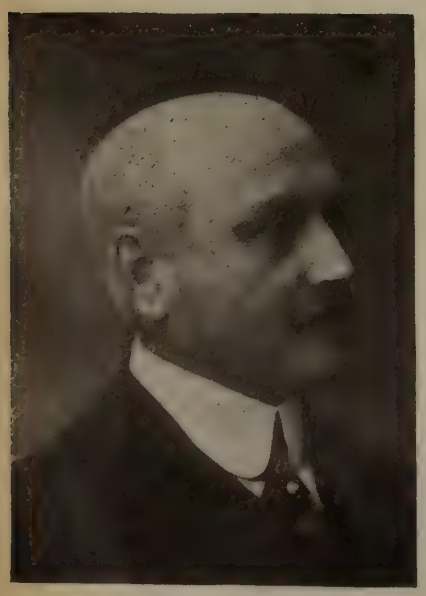
In conclusion, he urged his hearers to remember that they were still paying for the war. Last year's budget contained $296,000,000 for war purposes, and this legacy of the war would remain until the people paid it off and removed it. No basis of taxation was fair to all, but he asked the people to adopt the spirit of how much, not how little, they could pay toward the liquidation of the Canadian burden following the war.

The Federal Minister of Labor.

Hon. Gideon Robertson was the last speaker and in a sound, straightforward, businesslike address he referred hopefully to the steadily improving relations between capital and labor. Many instances were furnished of the progress that had been made in this direction. The employing class as represented by the Canadian manufacturers and organized labor had come to understand each other. Now they go to the Government jointly with matters upon which they agree. One of the fine results of such co-operation was the decision to vote $1,000,000 annually for 10 years for the advancement of technical education. If employers and employees could continue to maintain confidence each in the other they would go on in the principle of co-operation which was most desirable for the making of a prosperous, happy and contented Canada.

The great gathering dispersed at eleven o'clock after singing whole-heartedly the National Anthem.

Premier Drury Welcomed at Noon Day Luncheon



Gordon C. Edwards, Ottawa, Ont.
Who Presided at the Luncheon

The lumbermen of the Ottawa Valley extending as far west as Pembroke and as far east as Hawkesbury certainly left nothing undone in the matter of welcoming and entertaining the delegates at the recent annual convention of the C. L. A. held in the capital city of Canada, ever beautiful and attractive. but never more so than when gracefully garbed in her spotless mantle of snowy white.

There were many functions of interest, and not the least important of which was the men's luncheon which was held in the beautiful dining-room of the Chateau Laurier at 1.00 p.m. on Thursday, January 13th. The gathering was graced by a number of representative men from Ontario, including Hon. E. C. Drury, premier of the province; Hon. Beniah Bowman, Minister of Lands and Forests; Hon. G. Howard Ferguson, leader of the Conservative Opposition in the Provincial Legislature; E. F. Perry, of New York (late secretary of the National Wholesale Lumber Dealers' Association); Hon. W. C. Edwards, Ottawa, and others.

Gordon C. Edwards, president of the Ottawa Valley Lumbermen's Association, proved to be a genial presiding officer. He kept everything running smoothly and in his opening remarks told of the pleasure which it afforded all the members of the Ottawa Valley Lumbermen's Association to welcome so many visitors. He was particularly pleased to greet the representatives from across the border. and assured them of a warm welcome. The lumbermen were fortunate in having for the chief speaker, Hon. E. C. Drury, who was paying his first visit to Ottawa since he had been called upon to assume the reins of government.

The premier of Ontario was cordially received and spoke of the importance and progress of reforestation and the necessity of conserving and perpetuating the natural resources of the province. Mr. Drury is an able, clear and winning speaker, and was given an appreciative hearing. At the outset he said that every good Canadian must be pleased at an opportunity such as the present when they could even talk business with their friends from the other side of the border. It was good to see the British and United States flags furled in amity as a part of the dining-room decorations, and he added that every good Canadian should promote friendly relations between the United States and Canada so that the cordial feeling which now exists between the two countries, may continue.

Before being "pitchforked" into politics, Mr. Drury said he was

a farmer, and as such he felt he had much in common with the lumbermen, as both were representatives of the great natural industries of the country. There was, however, this difference: The farmer when he took out a crop at once started to plant another, so that the earth in perpetuity might bring forth its increase. The lumberman had been inclined to forget that trees grow, but rather to treat them as of the mineral kingdom, something to be exploited and used, then forgotten.

The Function of the Lumberman.

Lumbermen must feel that, like farmers, they were but producing crops, and when they cut an area of its trees, provision should at once be made for soil cultivation or reforestation. In this connection Canada had much to learn from Europe, and from the forests there which had been replenished to stand as a perpetual asset. Lumbermen in the past had not only cut the timber, but had destroyed the soil producing it, so it had been very hard to get that soil back on a productive basis. He urged special provision for the removal of forest debris and the prevention of forest fires.

Hon. E. C. Drury, Premier of Ontario
Who Spoke Strongly in the Interests of Reforestation of the Province.

In Ontario, Mr. Drury said, it should be an easy matter to get a close co-operation between the lumbermen and the government in the matter of protection of forest resources and also to some extent reforestation. The lumbermen must work for the future. They could not afford to dissipate their resources within the next few years.

During the last year the Ontario Government had made a proposal in regard to the reforestation of the older areas of the province. Much of the land in older Ontario was fitted for nothing but the growth of timber. In this connection, the Government had proposed to reforest lands obtained by the municipalities and to administer such as long as the municipalities were prepared to bear the cost. Such municipal forests, he thought, would in time become a valuable source of revenue to the municipalities owning them.

Mr. Gordon C. Edwards said the lumbermen were the best foresters and they would prove that they believed in the policy advocated by Premier Drury. He said he had watched with interest the course of the farmers' government during the term it had been in power, and he assured Premier Drury that at the next election he would find a "good many farmers in the city of Ottawa."

Ensuring Perpetual Timber Supply.

Hon. Beniah Bowman, Minister of Lands and Forests for Ontario, the next speaker, endorsed the remarks of the premier as to the necessity for reforestation and conservation of the timber resources of the province. In the Ottawa Valley the timber seemed to sand up and survive better than the growth in the northern part of the province. The problem facing the lumber industry at the present time was how to ensure a recurring harvest and at the same time have a perpetual supply of forest growth. The pulp industry in Ontario could be made perpetual, he believed, because of the quick growth of spruce and other woods used in pulp manufacture. The duty of the lumberman was to harvest economically the present growth and at the same time to try to produce another crop for the future. He agreed with Mr. Edwards that professional lumbermen, not "scalpers," were the best foresters and assured the lumbermen that their co-operation in forest protection would be very welcome.

Hon. G. Howard Ferguson, leader of the Conservative Opposition in the Provincial Legislature, was greeted with hearty cheers when he arose to speak. He said that if certain of his neighbors were not present (referring to Messrs. Drury and Bowman) he might refer to the lumbermen as constituting one of the big interests. But they were a big interest just the same and in more ways than one. Professional lumbermen were best qualified to deal with the problem of caring for the forests and he had always found the lumbermen anxious to co-operate in every way in any scheme looking to forest preservation.

One of the best methods of forest preservation was to remove the fire menace, the debris in the woods which followed every lumbering operation. This if carried out would, in time, solve the protection question.

It was also the duty of the Government to do what it could to assist the lumbermen in finding markets. Under the former Government steps had been taken to this end with results that were satisfactory. The speaker had always been friendly to the lumbermen because he had always found the lumbermen a good friend to Ontario.

E. F. Perry, of New York, representing the National Wholesale Lumber Dealers' Association of the United States, then spoke briefly bringing to the gathering the best wishes and greetings of the sister organization.

Gold Watch For Mr. Cameron.

One of the most faithful and obliging officers that any organization can have is possessed by the Canadian Lumbermen's Association in the person of Robert G. Cameron, of Ottawa, honorary treasurer.

Chairman Edwards referred to the time and ability which Mr. Cameron had devoted to the position, and said that, on behalf of the Canadian Lumbermen's Association, it afforded him great satisfaction to present Mr. Cameron with a small memento of appreciation and a token of the esteem in which he is held.

Hon. Beniah Bowman, Toronto
Minister of Lands and Forests

Hon. G. Howard Ferguson, Toronto
Former Minister of Lands and Forests

Mr. Cameron was a much surprised man as Mr. Edwards handed him a handsome gold wrist watch bearing the inscription "To R. G. Cameron, from the Canadian Lumbermen's Association, January 13th 1921." The recipient was given a rousing cheer, and in acknowledging the presentation modestly remarked, "Mr. Chairman and gentlemen I thank you."

Annual of the New Brunswick Association

The annual meeting of the New Brunswick Lumbermen's Association will be held on Tuesday, March 9th, for the election of officers and the receiving of reports. Donald Fraser of Plaster Rock, is president of the association; Wm. Richards of Campbellton, vice-president and R. W. McLellan of Fredericton, secretary-treasurer. The Executive Committee is composed of Donald Fraser, W. B. Snowball, F. S. Beatteay, J. W. Brankley, Wm. Richards, W. Garfield White, Angus McLean, James Robinson, George King.

Delegates to Ottawa Convention

The delegates who registered at the thirteenth annual convention of the Canadian Lumbermen's Association, held in Ottawa on January 12 and 13, and the firms they represent, were as follows:

Allan, John B., Robert Cox & Co., Ottawa.
Ashley, C. H., Glens Falls, N.Y., Finch, Pruyn & Co., Inc.
Auger, A. G., Auger & Son, Quebec, Que.
Bain, B., Cache Bay, Geo. Gordon & Co.
Baker, F. C., Sherbrooke, Devon Lumber Co.
Barbour, A. W., New Mills, N.B., J. & A. Culligan.
Barnet, Thos. F., Renfrew, Ont., A. Barnet & Co.
Barnjum, Frank, J. D., Annapolis Royal, N.S.
Barre, E. C., Sarnia, Cleveland-Sarnia-Sawmills Co.
Bartlett, Gordon, Orillia, Ont., Strong Lumber Co.
Bartlett, H. M., Orillia, Ont., Strong Lumber Co.
Bartram, J. C., Ottawa.
Beatteay, F. C., St. John, N.B., Stetson, Cutler & Co.
Beatty, W. R., Pembroke, Colonial Lumber Co.
Beck, W. F., Penetang, Ont., C. Beck, Mfg. Co.
Belford, John A., Ottawa, Ont.
Bell, W. J., Sudbury, Spanish River Lumber Co.
Belton, Chester H., Sarnia, R. Laidlaw Lumber Co.
Benson, F. M., Montreal, Riordon Company.
Bernard, J. A., Montreal, Seaman, Kent Co.
Berry, John M., New York, Berry Lumber Co.

Methods and Equipment in Woods Operation

Woodlands Section Endorses Co-operative Means and Considers Establishment of Institution for Rangers and Cullers—Use of Wireless Telephony

The Woodlands section of the Canadian Pulp & Paper Association, at the annual meeting, held on January 19th, at the Windsor Hotel, Montreal, appointed a committee to co-operate with a committee of the American Pulp & Paper Association in studying methods and equipment employed in woods operations. The committee are. Messrs. Ellwood Wilson, Laurentide Company, Limited; T. F. Kenny, James McLaren Company; G. H. Anson, Abitibi Pulp & Paper Company, and T. E. Draper, Riordon Pulp & Paper Company.

The subject was originally brought up at Toronto, where, according to General J. B. White, the chairman, it aroused considerable interest. Mr. O. M. Porter, of the Woodlands section of the American Pulp & Paper Association, introduced the subject, stating that his Association was gathering information from the various companies on the point as to what experiments had been made with woods equipment. This will be compiled and sent to the companies. It was also proposed to carry out further experiments at an experimental station, preferably of an international character the funds for experiments to be furnished by the companies.

Mr. C. G. Piche, chief forester of the Province of Quebec, endorsed the idea of getting further information on such subjects as tractors. The Provincial Government's desire was to co-operate to the fullest extent with the lumbermen. As they knew, new regulations as to cutting had been drawn up, but the Government was willing to make exceptions provided it was shown that these were justified.

The Chairman, referring to the use of tractors, pointed out the necessity of having reliable maps so as to give the proper grades.

Mr. Anson read a paper on the necessity for co-operative experimental work to better the present methods employed in physical woods operations. He expressed approval of the suggestion that an experimental station be organized in the charge of a technical and practical man. The idea was that the expense should be borne by the companies, based on the amount of their annual production. The policy of operation would be under the jurisdiction of a governing board; this policy should include the investigation of new and varied methods of timber cutting, brush disposal, fire protection, log hauling, log loading and yarding, log booms, log towing in open water and slack river water, cruising, flying, logging railroads, and new mechanical tools incident to the conduct of new methods. The question of location of the depot was of importance in view of the fact that the station should be as nearly as possible self-sustaining. Mr. Anson discussed the advantages of such a depot, pointing out in particular the great expenditure involved, and the difficulty of securing a depot located in such a position as to meet the conditions of all the companies. Mr. Anson then outlined a plan which he declared was more feasible. It contemplated the organization of an experimental division of the Woodlands section of the Pulp & Paper Association, in charge of a technical efficiency engineer, and with a good staff. The governing board would formulate the policies to be followed, and also apportion the amount of experimental effort which each of the subscribing companies should accomplish within a given time, the expense not to be beyond a company's pro rata quota to the general expenses. The preliminary work was to be followed by more severe tests by members of the department's staff, and the data submitted to the board. If the board found the methods successful, the findings were to be distributed to the various companies for their consideration and individual action.

Mr. Ellwood Wilson stated that the companies were at work more or less in the dark—if they could formulate a co-operative scheme it would be a great value to the companies.

The committee was then appointed to go into the entire question with the American Pulp & Paper Association, reports to be made to the Canadian & American Associations.

School for Education of Rangers

The following were appointed a committee to consider the question of establishing a school for the education of rangers, cullers, and foremen: Messrs. C. G. Piche, T. Mack (Brown Corporation), R. Kernan (Donnacona Paper Company), Arthur Graham (Ottawa Valley Forest Protective Association), and H. Sorgius (St. Maurice Forest Protective Association). The committee will take up this question with the Provincial Government with a view to securing an appropriation. The subject was introduced to the meeting by Mr. Piche.

The officers for the present year are: Chairman, Mr. S. L. deCarteret, Brown Corporation; vice-chairman, Mr. McE. Bowden, Laurentide Company, Limited; councillors, Messrs. Ellwood Wilson, Laurentide Company; T. F. Kenny, James McLaren Company; B. F. Avery, Spanish River Pulp & Paper Company, Limited.

At the afternoon meeting, held under the auspices of the Quebec Forest Protective Association, the subject of fire prevention on railways was discussed. It was introduced by Mr. J. F. Gregory, of Murray & Gregory, St. John, N.B. He referred at length to the history of the subject, especially in relation to the Canadian National Railways. The C.P.R. paid the entire cost of fire protection, while the Canadian National Railways paid a third by agreement. The railways were, as a matter of fact, as much interested in forest protection and development as were the lumbermen, by reason of the traffic that accrued to the companies from the forest wealth. He insisted that the National Railways should come under the same rules as privately owned lines. His main objection was that while the C.P.R. took great care to prevent forest fires, and helped in their prevention, the Government railways, neither took such care nor paid their proper share in preventive work. In cases of fire or other damage, people should have the same rights against the Government-owned lines as against the company roads. In connection with this, Mr. Gregory said he had always found the C.P.R. people anxious to co-operate with him in work to prevent forest fires, but the same spirit had not been manifest on the Government roads.

Getting After Railway Department

Mr. Ellwood Wilson, in the course of a vigorous criticism of the policy of the Federal Railways Department, declared that the deputation which waited on Dr. Reid at Ottawa had been treated in a far from gentlemanly way. When they made representations as to the damage to forests done by the Government railways, they were told in effect to mind their own business and to provide their own protection. The local officials gave every help, but this was a national question, and he did not see why the Government lines should not conform to the rules of the Railway Commission which had proved so effective on private lines.

The discussion was also taken part in by Messrs. H. Sorgius, A. Graham, J. D. Brule and H. W. Sharpe, the last named gentleman representing the Canadian National Railways. While the other speakers criticized the Canadian National Railways, Mr. Sharpe pointed out that the Government issued instructions to prevent fires, and they expected these to be carried out. He felt assured that the Canadian National Railways would be willing to co-operate with those present in preventing fires. As a result of this offer, the managers of the Fire Protective Associations in the Province of Quebec were asked to meet Mr. Sharpe with a view to better fire protection on the Canadian National Railways.

A motion was also passed in favor of the Canadian National Railways being placed under the jurisdiction of the Railway Commission for fire protection purposes, and that a committee meet the officials of the C.N.R. with a view to working out a fire protection policy for the whole system.

Wireless in Forestry Work

Mr. D. R. P. Coates, of the Marconi Wireless Telegraph Company of Canada, gave a brief talk on wireless, especially as applied to forestry work and fire protection. Recent improvements in wireless within the reach of pulp and paper and lumber companies. Portable sets were specially suitable for lumbering and mining camps. Pulp and paper and lumber companies would find wireless telephony of the utmost value in the towns and camps under their control. British Columbia was leading Canada in the use of wireless telephony for forest protection. Mr. Coates afterwards demonstrated the use of wireless telephony by means of a portable set, which reproduced music played at the Marconi plant in Montreal.

Prevent Accidents in Pulp Mill Operations

The Ontario Pulp & Paper Makers' Safety Association is conducting an Accident Prevention Contest among the pulp and paper mills of the province, and already a large number of entries have been made. The aim of the contest is to reduce the number of accidents in the mills and thereby prevent a good deal of distress and misery among the workers.

New Standard Order Form Ready

Being Supplied to Lumber Dealers of Ontario—Its Special Features and Important Points

The standard order form, which has been officially adopted by the Ontario Retail Lumber Dealers' Association appears, as finally amended. in this issue of the "Canada Lumberman."

The new order form is now being supplied to retailers in any desired quantities, serially numbered, by the secretary of the Ontario Retail Lumber Dealers' Association, Crown Office Building, Toronto. The form will be sent out with the name and address of the member of the association who may desire any number. There is an original form and a duplicate so that a carbon copy is retained of each order. The name "George D. Walker Lumber Co., Limited, New Town, Ont.," is simply a name taken for the occasion and shows exactly how the retailer's name and address will appear .

There are several important features in connection with the order form and no detail has been overlooked. The committee engaged in its preparation have been busy for a long time, and two important provisos are intended to overcome disputes and misunderstandings, eliminate cancellations and speculation and put business between wholesaler and manufacturer and retail distributor on a sound, friendly footing, with co-operation as a basis, believing that the best interests of each are served by mutual respect, confidence and co-operation.

It will be distinctly noted that sometimes a car is ordered, which is not up to grade or specifications. The order form is intended to obviate vexatious delays and squabbles by destinctly pointing out that in such cases the material, whether whole carload or part of it,

> "will be unloaded and held at shipper's expense and disposition." It is agreed that the buyer is hereby authorized to use all or part of any shipment found to be up to grade and in accordance with this order. Any stock below grade to be held for the count of the shipper and at his risk. If there is an unreasonable amount below grade, the buyer shall have the right to reject the whole carload."

The clause intended to prevent cancellation or "renaging" on contracts is embodied in the following:—

> "This is a written confirmation of our order to your representative on the above list and must be confirmed by the head office of the seller within ..... days from this date. If not in the meantime so confirmed, the order shall be void at the expiration of the time limited. This order is original to seller. Duplicate retained by buyer.

There are also blanks at the left-hand corner for the accepted date and name of the salesman and for the firm, and on the right for the buyer's signature. The original of the order goes to the seller and the duplicate is retained by the buyer.

There are other features that will commend themselves by close study of the wording on the form, and already a large number of orders for printed copies have been received by the secretary for various quantities.

It is expected that practically all the members of the O. R. L. D. A. will see that orders are given on their forms henceforth. In speaking of the advantage of this, one dealer recently stated: "I know just exactly now what is in the order form but in the case of the various forms presented by different firms, some of which I was asked to sign and some of which I was not, there were many stipulations and other regulations in small type of which one did not have a chance to scrutinize. This left room for many loop-holes and was productive not infrequently of trouble. Now everything is clear, plain and simple and I intend to see that no lumber salesman gets my order unless it is made out on the form supplied by the association.

Progress Shown All Along the Line

Canadian Forestry Association Now Has Over 12,000 Members—Old Officers Re-elected

The coming of age meeting of the Canadian Forestry Association held at the Windsor Hotel, Montreal, on January 20, was one of the best attended in recent years. Mr. C. E. E. Ussher presided.

The report deals at length with the activities of the Association during the year, and pointed out that the revenue had increased from $20,067, in 1919 to $38,384, last year. The membership had increased by three thousand making a total of 12,050. It was stated that the Association had striven to impress upon the Canadian people the pre-eminent value of the forest industries as creators of employment and distributors of wealth. At the same time it had tried to demonstrate the identity of interest between the permanent existence of these industries and systematic forest management. The Association have received important financial support from nearly all the Provincial Governments, and also from many of the lumbering and pulp and paper interests.

The Chairman, in his address, pointed out that it was proposed to hold the Imperial Forestry Conference in Canada in 1923, and in that connection he suggested that they should appoint Mr. Robson Black, the secretary, manager of the Forestry Association. He spoke in the highest terms of the services of Mr. Black, who now in fact really acted as the manager.

A long discussion took place on the proposed rearrangement of the Board of Directors, particularly as to the representation on the board of the various provinces. In this relation it was suggested that the west should be more strongly represented. The Province of British Columbia should have strong representation on the directorate in view of the importance of the Province from the timber point. It was further stated that the west was showing more and more interest in forestry matters and that it would be well to conserve that spirit of interest. On the motion of General J. B. White it was agreed to alter the representation as follows: Ontario 15 members, Quebec 10, New Brunswick 3, Nova Scotia 2, British Columbia 6, Alberta 3, Saskatchewan 3 and Manitoba 3.

This was followed by a discussion of forest fires contiguous to steam railways in which prominence was given to the importance of all railways coming under the control of the Railway Commission.

Hon. B. Bowman, Minister of Lands & Forests for the Province of Ontario, expressed the view that the conservation of timber and its protection from fire was one of the most important questions of the day. In Ontario they hoped to inaugurate a better fire protection system. He was a strong believer in re-forestation work, in order to preserve our supplies. In his Province they had been asking the lumbermen to destroy the debris, but in view of certain opposition to this it was advisable to go slow.

Votes of condolence were passed with the families of the late Mr. Wm. Power, of Quebec, and the late Mr. E. S. Goodeve, of the Railway Commission.

The election of officers resulted as follows: President, Mr. C. E. E. Ussher, re-elected; vice-president, Mr. Dan McLachlin, re-elected. Directors—Ontario, Messrs. G. C. Edwards, Clyde Leavitt, R. H. Campbell, Prof. Fernow, C. J. Booth, E. J. Zavitz, A. Grigg, P. B. Wilson, T. W. Dwight, J. S. Gillies, J. W. Black, W. E. Bigwood, C. T. Young, Dan McLachlin, Hon. Geo. Gordon; Quebec, Hon G. Allard, A. McLaurin, Mon. Roy, G. C. Piche, Sir W. Price, J. B. White, Geo. Chahoon, R. O. Sweezey, Avila Bedard, E. Wilson; New Brunswick, D. Champoux, A. McLean, W. E. Golding; Manitoba, J. W. Dafoe, G. W. Allan, E. Fitzgerald; Nova Scotia, F. J. D. Barnjum, Senator N. Curry; Saskatchewan, John Dixon, Hon. A. Turgeon, Jos. Glenn; British Columbia, Hon. H. Bostock, Hon. A. C. Flumerfelt, R. D. Prettie, H. R. MacMillan, P. Z. Caverhill, C. McNabb. Alberta, William Pearce, G. P. Marnoch, John Harvie.

St. Lawrence Association Elects Officers

At the annual meeting of the Southern St. Lawrence Forest Protective Association, Limited, held at the Windsor Hotel, Montreal, on January 20th, the following were elected as officers. Mr. W. G. Power, Hon. President; Mr. D. C. T. Atkinson, president. Western division—Mr. S. L. DeCarteret, vice-president; directors, Messrs. W. G. Power, H. M. Wilson, Arch. Fraser, F. G. Quincy, E. A. Rockett, S. L. Wood. Eastern Division—Mr. D. Champoux, vice-president; dierctors, Messrs. Chas. R. Macleay, Angus McLean, Wm. Russell, E. S. Holloway, H. Calhoun, Geo. C. Scott. Secretary-treasurer, Mr. Paul G. Owen.

The report stated that owing to the very dry weather during the months of May and June, the increase in the number of fires reported was large with correspondingly increased losses. However, the small area of merchantable timber burnt (22½ miles) when compared with vast areas destroyed any season under similar climatic conditions, previous to the formation of the association, showed the work of the manager and rangers to be successful. Messrs. C. B. Guerin and J. D. Brule reported at length on the various activities of the association.

A vote of condolence was passed with the family of the late Mr. W. Power.

St. Maurice Association Does Good Work

The St. Maurice Forest Protective Association, Limited, continues to do good work. At the annual meeting held in Montreal on January 20th, it was reported by Mr. Chas. Lebrun, the president, that during the months of May, June and August, the climatic conditions in the St. Maurice Valley were unfavorable and that in the months named, fires were more numerous than at any time in the history of the association. Notwithstanding this, the members of association escaped any widespread disaster.

The area of merchantable timber burnt was approximately 4497 acres, about 1/20th of one per cent. of the total area patrolled. Fifty-two per cent. of the total number of fires was caused by the railway. The President urged that the Association continue a strong educational campaign. In regard to the cleaning and burning of all forest debris at a depth of 100 ft. from the boundary line of the railway right of way, the association had cleaned about two and a half miles. It was found, however, that the cost was prohibitive, having regard to the benefit derived from the work. In the president's opinion, the debris should be burnt only when the area is being logged.

The election of officers resulted as follows: Mr. F. Faure, president; Mr. F. I. Ritchie, vice-president; Messrs. F. Faure, Ellwood Wilson, J. P. McLaurin, F. I. Ritchie, J. M. Dalton, S. L. De Carteret, Robert F. Grant, directors; Mr. Henry Sorgius, manager and secretary-treasurer.

Boom Companies Hold Annual Meetings

The annual meetings of the various boom and improvement companies was held at the Queen's Hotel, Toronto, on January 19. There was a good attendance and the business of each organization was disposed of in quick order. All the streams were reported to be in good condition and some improvements were outlined for the coming year.

The French River Boom Co., which handle all the logs of the various owners coming down the French River to Georgian Bay elected W. J. Sheppard of the Georgian Bay Lumber Co., Waubaushene, as president, and W. F. Beck, of the C. Beck Manufacturing Co., Penetanguishene, as secretary-treasurer. The directors for the coming year are F. N. Waldie, of the Victoria Harbor Lumber Co. Wm. Irwin, Peterborough; W. E. Bigwood, Graves, Bigwood & Co. Byng Inlet; and W. J. Bell, Spanish Mills Co., Sudbury.

The Mississauga River Improvement Co., Limited, which handles the logs coming down the stream bearing this name and looks after all improvements, elected J. J. McFadden of McFadden & Malloy, Spragge, and F. N. Waldie of the Victoria Harbor Lumber Co. as secretary-treasurer. The directors are C. N. Carney of the Hope Lumber Co., Thessalon; John Malloy, Spragge and W. E. Bigwood.

The Log Picking Association, which operates on Georgian Bay in the matter of the recovery of logs lost in the operation of towing rafts, etc., elected the following committee to look after its affairs for 1920: W. J. Sheppard, Georgian Bay Lumber Co., Waubaushene; F. N. Waldie, Victoria Harbor Lumber Co., Toronto; W. E. Bigwood, Graves, Bigwood & Co., Byng Inlet; E. Letherby, Chew Bros. Limited, Midland; C. N. Carney, Hope Lumber Co., Thessalon; W. J. Bell, Spanish Mills Co., Sudbury; J. J. McFadden, McFadden and Malloy, Spragge; A. E. Beck, C. Beck Manufacturing Co., Penetanguishene; H. H. Bishop, Bishop Lumber Co., Nesterville; W. F. Beck, C. Beck Manufacturing Co., Penetanguishene.

The Spanish River Improvement Co., Limited, elected the following officers for 1920: President, W. E. Bigwood; vice-president, George R. Gray, Spanish River Pulp and Paper Mills, Sault Ste. Marie; secretary-treasurer, Charles McCrea, M.L.A., Sudbury. The directors are W. J. Bell, J. J. McFadden and F. N. Waldie.

The Sable & Spanish Boom and Slide Co. of Algoma, Limited, which handle the logs out of the Spanish River, elected W. E. Bigwood, president, and W. J. Bell as secretary-treasurer. Directors J. A. Ferguson, Spanish Mills Co., Massey; W. J. Bell, J. J. McFadden and F. N. Waldie.

E. W. Backus has closed the deal for the English River pulpwood concession consisting of 3000 square miles, for which he paid a bonus of $50,100 and the usual pulpwood fees. Mr. Backus has started the erection of his new pulp plant at Kenora, and states that he will expend in construction there and in the development of the limits, not less than $10,000,000 within the next few years.

Retail Lumbermen Gather at Niagara Falls

Rousing Organization Meeting Elects Live Officers and Becomes Branch of Parent Provincial Body—Co-operation and Service Evidenced

K. J. Shirton, Dunnville, Ont.
Chairman of N.P.R.L.D. Association

An enthusiastic organization meeting of the live wire retail lumber dealers of the Niagara peninsula was held on Saturday, January 22, at the Clifton Inn, Niagara Falls, Ont. There was a large and representative attendance and the utmost harmony and spirit of co-operation prevailed. The visitors enjoyed a splendid dinner at the hotel and afterwards proceeded to business.

James Harriman, the veteran and highly respected local chairman of arrangements, presided and, in calling the gathering to to order, remarked that he was strongly in favor of the get-together movement. The retail lumber dealers in other parts of the province of Ontario had formed district associations and there was no reason why the men in the Niagara peninsula should not o the same as he felt that great good would come out of such a step, here were many important matters to take up. All other interests ere uniting for their mutual protection and welfare. The district mbermen should not be behind in the matter of progress and xpansion.

John B. Reid, of Toronto, President of the Ontario Retail Lumber)ealers' Association, was first called upon and explained the work hich had been done by this central body in a large and rapidly-rowing association. He referred to the splendid meetings held in ther districts such as at Chatham and Orangeville, which he had ttended during the past few weeks. Mr. Reid outlined in detail the enefits of organization and stated there was more money invested i the province in the retail lumber line than there was in the whole-ale lumber business, "although we do not put on half the airs." If you do not think a lot of yourselves nobody else will think anyhing of you. The retail lumber business to-day is a man's business—real business—and you can make it as big as you like, or as small s you like. If you organize and elect live officers you will get good esults. Co-operation and not cut-throat competition is the watchord of to-day. Why not the retail lumber dealers get together and arn from the experience and insight of one another?"

Secretary Horace Boultbee, Toronto, spoke of the early organizaon of the retailers of the province in the Ontario Association. Three ears ago the membership was 29 in the provincial body and to-day here were 185 members. The roll included nearly all the leading tail lumber merchants of the province. Various district bodies had een organized to attend to purely local problems and they were all a flourishing condition.

K. J. Shirton, Mayor of Dunnville, stated that there were two sides a local organization, the social and the business. It was a pleasure meet fellow retailers from the same district. He thought when ganized they should meet, at least, once every two months.

O. W. Rice, of Welland, strongly favored the formation of a iagara branch for the protection and benefit of the dealers. S. L. ambert, of Welland, thought that one of the matters which could taken up was the elimination of bad debts and the improvement the Mechanic's Lien Act and that they could come to some agreeent in the matter of credits. S. B. House, of Stevensville, spoke ong similar lines. Other speakers heartily approved of the proposal organize and suggested that some matters which might profitabaly taken up were overhead costs, trade ethics, business assessment x, workmen's compensation act, the question of credits, etc.

The new standard order form, the steps which have been taken the direction of having a new Mechanic's Lien Act passed, which ill afford more adequate protection to the retail lumbermen, the ork of the trade relations committee in adjusting disputes and setng claims and thereby preventing lawsuits, terms of sale, the stopng of the sales of shingles to farmers' clubs, and other issues were touched upon by Messrs. Reid, Boultbee, Wise, Bailey and R. E. Reid. The work of the Lumbermen's Credit Bureau in Toronto was also explained.

Officers Elected for Coming Year

It was moved by K. J. Shirton and seconded by S. L. Lambert, that the Niagara Peninsula Retail Lumber Dealers' Association be organized in affiliation with the Ontario Retail Lumber Dealers' Association. This was carried unanimously.

The following officers were then elected:

Chairman—K. J. Shirton, Dunnville.

Vice-chairman—R. E. Reid, Niagara Falls.

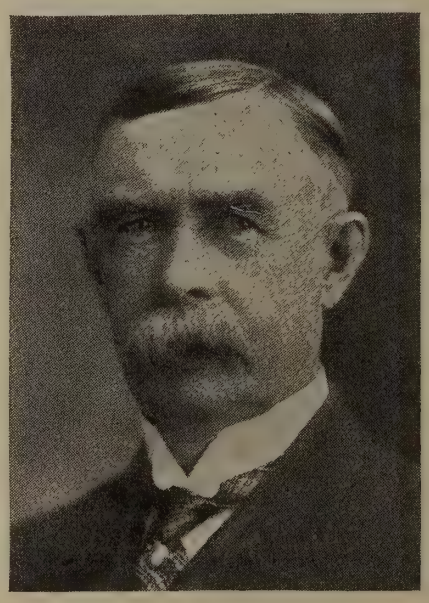
Secretary-treasurer—O. W. Rice, Welland.

Executive Committee—S. L. Lambert, Welland; A. M. Wise, St. Catharines; James Harriman, Niagara Falls; A. Bailey, Hagersville; J. T. James, Bridgeburg, and S. B. House, Stevensville.

The annual fee was fixed at three dollars and every member present promptly joined the new organization which starts with bright prospects and strong support.

Among those present at the gathering were A. M. Wise, F. W. Butler, E. R. McBride, St. Catharines; S. B. House, Stevensville; O. W. Rice, S. L. Lambert, Welland; A. Bailey, Hagersville; James Harriman, John J. Harriman, R. E. Reid, Alex. Reid, Niagara Falls; K. J. Shirton, Dunnville; John B. Reid, Toronto, president of the O.R.L.D.A.; Horace Boultbee, Toronto, secretary O.R.L.D.A., and G. B. Van Blaricom, "Canada Lumberman," Toronto. Letters were received from a number of other dealers expressing their sympathy and support with the organization and stating they would do all in their power to further its influence, usefulness and activity on behalf of the retail lumber trade.

Lumbermen's Credit Bureau Has Good Year



W. C. Irvin, Toronto
Retiring Chairman of Credit Bureau

At the annual meeting of the Lumbermen's Credit Bureau, which was held at the Board of Trade rooms, Toronto, on January 21st, there was a large and representative attendance. W. C. Irvin, chairman, presided and the reports presented by Secreary H. Boultbee and Treasurer J. B. Reid were of a most encouraging character. A number of appreciative references were made to the work and worth of the Bureau, which was organized in 1915 with a membership of eleven and to-day has forty-five firms on the roll, there being a substantial increase during the past year.

When the matter of the election of officers for the coming year came up, Mr. Irvin was nominated for a third term as chairman but firmly declined. He stated that he had occupied the position for two years and thought there should be some new blood injected in the Executive and that the honor should be shared by others. John B. Reid, who has been treasurer for the past six years, also resigned although requested to continue in harness.

For the coming year it was decided to combine the offices of Secretary and Treasurer. O. M. Moore of the Ontario Lime Company, Limited, was unanimously elected to the chairmanship. H. Boultbee was elected secy.-treas. and the following members will constitute the executive for 1921—J. S. Bond, C. L. McCabe, S. McCord, E. I. Gill, J. D. Copeland and F. Rogers. There was an informal discussion over the building prospects for the coming year and the general expression of opinion was that the outlook was very fair and getting better all the while.

The new Traffic Department of the Canadian Lumbermen's Association will be a distinct step in advance. It marks the broadening out of the organization and places it upon a more prominent and effective basis.

Greater Co-operation in Western Lumber Trade

Timber Industries Council Formed Which Will Take in Every Factor Interested in B.C. Forest Wealth and Its Products—Business Continues Quiet

By the strength of the contingent sent by the Coast lumber interests to attend the Northwest Retail Lumber Dealers' convention at Winnipeg, the interest being taken in the trade with the western provinces may be gauged, says the Vancouver correspondent of the "Canada Lumberman." Those engaged in the producing end of the lumber industry in British Columbia fully realize the importance of retaining the confidence of the distributors in the prairie provinces, one of the big natural markets for B.C. lumber, and a market which is bound to grow steadily. There is behind the sending of the big delegation, the further possibility that the uncertain, unsettled and unusual conditions of trade in those western provinces lately, has created so much conjecture that the millmen wished to see and hear for themselves and form their opinions first hand. Whatever the major and minor motives, there is no question that the fraternizing of the one big element of the western lumber trade with the other will be a direct benefit to all.

Timber Industrial Council Formed

There is evidence that the industry is waking up to the need of fuller co-operation and co-ordination of effort throughout all its branches. The biggest evidence is the recently formed Timber Industries Council of British Columbia, which will, when its organization is completed, take in every factor engaged in or investing in the forest wealth of the province and its products. The new council has powerful backing in the leaders of logging, timber owning and lumber manufacturing operations. Men prominent in all branches of the industry have been giving their time and the benefit of their knowledge, experience and advice to the work of mapping out the basis of the new Council's business and the lines on which it is to function. While every detail has not yet been settled, there has been progress made in preparing articles of incorporation setting forth the aims and objects sought. A board of directors has been provisionally formed, and some of the organizations which will be included in the membership, have appointed their delegates. Others will have the same thing done ere long, and still other interests are being put into shape to send delegates. The timber owners are to be got into an association, and so will the pulp concerns, and it is possible the wholesale lumber dealers will as well. The aim is to have no section unrepresented.

New Position for Mr. Grainger

Having made the start, the new association has secured general approval for one of its first actions, the securing of the time and services of Mr. M. A. Grainger, late Chief Forester for British Columbia, as the executive head of the Council with the title of managing director. Mr. Grainger has opened offices in the Pacific Building, Vancouver, which will be the centre from which the Council will operate. In all it is hoped to have nine or ten associations now in existence of being formed, joined in the central body, which has been described as an "association of associations." Its field of usefulness has been outlined as providing an authority to speak and act on behalf of the whole timber community without overlapping in any way with the various associations now in existence, which will continue to carry on in their own particular line of work. Many general matters affecting the industry as a whole which have been neglected or overlooked because they were the particular business of no one body, will now be referred to an office with definite responsibility for getting results. The general question of how to secure more stable conditions throughout the industry and closer co-operation between the different sections or interests, will naturally be followed up by a persistent get-together campaign. Such broad questions as taxation, transportation, forest protection and legislative issues, Government or banking policy which may tend to work hardship on timber interests, the securing and circulation of information useful to those in the industry, joint action in advertising and market extension for timber products, will be some of the subjects which will take up the energies of the Council, and from time to time pronouncements will be made on these points which may for the time be of live issue. Two questions which are of vital interest to the whole industry will yet have to be dealt with if the Timber Industries Council accepts an obvious responsibility—that of labor and that of relationship with the retail trade in the markets reached by timber products of British Columbia. It will be some time before the council is completely settled as a going concern, and all matters for the consideration of this new "parliament" of the industry will in due course have attention.

Logging, Sawing and Selling Quiet

With but one or two little rifts in the cloud, through which a stream of sunlight is shining encouragement and infusing hope, the winter condition of the lumber industry in British Columbia shows but little change, and possibly just as little prospect of any sudden change. The actual new business being done in rail trade is represented by a moderate amount of business placed from Eastern Canada. Much of this is in heavy timbers, and while the prices paid are not high, they are fair, compared with the general run. The conservative Eastern buyer is not chasing for mere bargains when he wants a particular specification. Well he knows the value of what he wants, the quality he can depend on getting from B.C. and the unwisdom of trying to get such specials at bargain counter prices. Hence, while competition is keen, for every lot which looks like an order, there is not real cut-throating. But the trade is still within very modest bounds.

A slight awakening of the shingle market across the line is a feature, some dealers being lucky to get quite a few orders. As the shingle production has been down to a minimum for months, the stocks had been gradually reduced. This applies more strongly to the higher grades, of exportable quality—low grade stock is a drug on the market—it will not bear the cost of shipment and there is no local demand for it. There are a few shingle mills operating (at very much lower rates of wages, by the way) and the general report current among brokers is that an order is not sure of immediate shipment as stocks are being cut slowly. However, that has not served to stiffen up prices at all. All orders are being handled on very close margins and there is no tendency to raise the prices. Cedar logs seem to be a little firmer because of renewed demand and such small quantities of desirable logs being put in the water just now.

Much Activity in the Pole Line

Another active feature of lumber production—one which seems capable of being developed, and showing signs of becoming very extensive is the trade in poles and piling. The big pole yards in the interior of the province, where most of the cedar stands of the suitable size are located, have all the business they can handle, and most of them have good crews in the woods getting out stocks. In brokerage circles orders are being received, and inquiries are coming in on a scale quite unusual. It is indication of the demand in the Eastern United States, which has to look more and more to the west for its requirements. One of the possibilities of this trade is that shipments by water through the Panama Canal to the Atlantic seaboard may increase. This will apply mainly to piling, for the cedar on the Coast does not cut out in sizes for poles. The limits in the interior could not send by rail to the coast for trans-shipment to ocean going vessels. The inquiry for small timber in quarters where limits are sold, show that there is a demand on the coast for the privilege of cutting the small timber, suitable for piling and props, leaving the saw timber. These inquiries are made by parties who claim they can place such a product in ready markets.

Logging on the coast is still inactive. A few camps are opened, others are making preparations to open, while others will not open for two or three months yet. The number of mills now sawing is constantly changing. A few that have been shut down have again made up crews and started to cut. Others, and among them large plants, both on the Island and Mainland, have either closed down and paid off their crews, or are reported to be preparing to do so. All these state definitely that the condition of the market does not warrant them continuing, and that present prices of lumber, even if they are lucky enough to sell, do not show a profit as compared with present costs of production. Those mills, which are still running or which have started up again, have nothing to say about the wisdom of the course, or whether they have business in sight to warrant them cutting. No mill has any great stock of logs, as the camps have been closed so long and what few booms there are in the storage grounds have been culled over more than once, while very few booms are arriving from up-coast.

Personal Paragraphs of Interest

J. A. Laferte, wholesale lumberman, Montreal, and his family are on a visit to Florida.

P. D. Gordon, of Mason, Gordon & Co., Montreal, is in the south on an extended tour of the yellow pine mills.

Brewster Loud, lumber manufacturer and wholesaler, of Detroit, Mich., spent a few days in Toronto recently on business.

R. A. Laidlaw of the R. Laidlaw Lumber Co. (Ltd.), Toronto, and Mrs. Laidlaw left recently on a visit to China. They expect to return about April 1.

The firm name of Cooke Bros., wholesale lumber, 4 Hospital St., Montreal, has been changed to that of W. F. Cooke. The business will be continued under that style.

A. Fenton, assistant sales manager of the Riordon Sales Company, Limited, was among those attending the annual convention of the Canadian Lumbermen's Association, Ottawa.

A. E. Clark, of Toronto, was in New York recently where he attended an Executive meeting of the National Wholesale Lumber Dealers' Association, of which he is one of the trustees.

Robert Sinclair, district forester of Vancouver, who is now attached to the staff of P. Z. Caverhill, chief forester for B. C., in Victoria, was in Toronto recently calling upon a number of friends.

Eric W. Hamber, president and general manager of the British Columbia Mills, Timber & Trading Company, Vancouver, B.C., spent a few days in Toronto recently and called upon a number of friends in the trade.

S. P. W. Cooke, late of Cooke Bros., Montreal, has joined the selling staff of Mason, Gordon & Co., wholesale lumber, 80 St. Francis Xavier Street, Montreal, and is in charge of the sales. Mr. Cooke is on a visit to Ontario calling on the trade.

H. E. Holland has been appointed Crown Lands Agent for the District of Kenora, succeeding F. T. O'Flaherty, who recently resigned. He should prove to be a capable official for the department, having a good knowledge of the district and the requirements of settlements.

Hon. Jules Allard, former Minister of Lands & Forest of the Quebec Government, was recently presented with his portrait by the members of the staff of the Prothonotary of the Superior Court, Montreal, of which he is chief. The portrait was painted by a Belgian artist, Mr. Alfred Faniel.

Allan McPherson, of McPherson & Clarke, lumber dealers and manufacturers of interior and exterior woodwork, was re-elected Reeve of Glencoe, Ont., in the recent municipal contest. Mr. Clarke is well-known to the industry in western Ontario and has given the progressive village faithful service.

W. B. Snowball, of the J. B. Snowball Co., Chatham, N.B., and Mrs. Snowball, spent a few days in Toronto recently. Mr. Snowball, who is a past president of the New Brunswick Lumbermen's Association, and a director of the Canadian Lumbermen's Association, called upon several members of the trade.

K. J. Shirton of the Wm. Shirton Co., Dunnville, who has been elected mayor of Dunnville, Ont., is well-known in retail ranks, and is a son of the late Wm. Shirton of Dunnville. He has always been a public-spirited citizen and has been a member of the Board of Education, alderman, public utilities commissioner and president of the Board of Trade.

At the recent elections in the Toronto Board of Trade, Sam McBride, lumber merchant, was re-elected as one of the representatives on the Canadian National Exhibition Association. W. F. Oliver, who was nominated by the Lumbermen's Section for a place on the council of the Board, was not successful, although he made a splendid run in the face of keen competition.

George W. Kilburn, manager of logging operations for the Nashwaak Pulp & Paper Co., died recently at his home in Fredericton, N.B., after a short illness from pneumonia. He was 41 years of age and was born in York county, New Brunswick. He had been engaged in lumbering all his life, having been a superintendent on the Upper St. John River for John Kilburn of Fredericton, before taking charge of logging, driving and rafting operations on the Nashwaak River some eight years ago. He is survived by his wife and three children.

C. A. Waterous, assistant manager, Waterous Engine Works Co., Brantford, was re-elected Water Commissioner at the recent municipal elections in that city, defeating his opponent by three votes to one. Mr. Waterous, for the past four years, has been a member of the Brantford Water Commissioners, during which time he had been chairman for two years. In his recent campaign, in which he was successful, the election is for a two-year term, and Mr. Waterous has again been made chairman of the Commission. He has long been a public-spirited resident of the Telephone City, being a past president of the Board of Trade, the Brantford Golf & Country Club, and the Brantford Club. Mr. Waterous is also a member of the Engineering Institute of Canada and of the American Society of Mechanical Engineers, as well as chairman of the Brantford branch of the Canadian Manufacturers' Association.

As C. A. Westley of the Toronto office of G. A. Grier & Sons, Montreal, was leaving the yard of the Nicholson Lumber Co. at Burlington, Ont., recently, and crossing the G. T. R. track, his Studebaker car was struck by a passing freight train. The car was badly damaged but Mr. and Mrs. Wesley escaped with a severe shaking up. They, however, had a close call. The automatic crossing alarm was out of order and the engineer did not blow his whistle until within a few feet of the crossing, which is a rather dangerous one at all times.

L. D. Barclay, of the Central Canada Lumber Company, Toronto, returned recently after an extended trip to the western provinces. Mr. Barclay spent some time with his parents in Edmonton and then made a journey to the coast where he visited a number of mills in the interest of B.C. forest products, which will in future be handled by the Central Canada Lumber Company, in addition to the various softwoods in which they have been specializing. Mr. Barclay reports that conditions in British Columbia sawmill and wholesale circles at the present time are quiet, but there is a hopeful feeling prevailing that as soon as spring business opens up, a decided improvement will take place.

New Firm Gets Off to Good Start

John A. Story, W. F. T. Story and G. A. Routliffe are members of a new company, which was recently organized in Ottawa under the name of the Story Lumber Co., Limited. The company, which has a federal charter, has leased spacious offices at 701 Hope Chambers, Sparks St., Ottawa, which will be the headquarters and under the direct supervision of John A. Story, while at 30 St. John St., Montreal, the old office of W. F. T. Story will be carried on as a branch.

The grading and outside work of the company is looked after by G. A. Routliffe, who for many years was yard superintendent of Fraser & Co.'s mill at Deschenes, Que., and previous to that was with George H. Perley & Co. in their spruce operations at Calumet.

John A. Story, who is president of the company, was for nearly a quarter of a century superintendent of the sawmill and lumber department of Fraser & Co., and for the past ten years vice-president and manager of the Fraser-Bryson Lumber Co., Ottawa.

For many years W. F. T. Story, vice-president of the company, has been engaged in the wholesale line in Montreal, devoting particular attention to birch and other hardwoods. The Story Lumber Co. handles white pine, red pine, spruce and hardwoods, and has already established a good connection with the trade.

Appoint New Canadian Representative

A. K. Johnston, Toronto

A. K. Johnson, of the wholesale lumber firm of J. P. Johnson & Sons, Toronto, who is well-known to the lumber and woodworking trade from several years' experience both in the yards and on the road, has been appointed Ontario representative of the Mowbray & Robinson Co., Inc, of Cincinnati, Ohio, manufacturers of hardwood lumber and flooring. The company specialize in oak, poplar, mahogany, beech, etc.

Mr. Johnson spent several days recently at the mills of the company familiarizing himself with their operations, and will call upon the lumber trade and woodworking industries of Ontario in their interests. He succeeds M. E. Cummings of Buffalo, as Canadian representative. J. J. Linehan of Cincinnati, sales manager of the company, was in Toronto recently, and met a number of members of the trade. Chas. Johnson, who is an uncle of A. K. Johnson and brother of J. P. Johnson, is manager of the company's interests in Rochester and surrounding territory. The appointment of A. K. Johnson should prove a popular and successful one for the Mowbray & Robinson Co., as he is well liked and well spoken of in the industry.

All Ready for the Big Retail Meet

Representatives from All Over Ontario Will Gather in Toronto on Feb. 15 and 16—Fine Program

The Fourth Annual Convention of the Ontario Retail Lumber Dealers' Association, Incorporated, which will be held at the Carls-Rite Hotel, Toronto, on Tuesday and Wednesday, February 15th and 16th, will be one of the most representative and important trade gatherings ever held by the forest products men of the province. Secretary Boultbee says he has already received assurance of a record attendance, and John B. Reid of Toronto, president of the association, declares that Toronto retailers are going to leave nothing undone to make the event a signal success.

On Tuesday morning, February 15th, the registration of delegates, meeting of directors and reception of visitors, will take place. At 2.00 p.m. the annual reports of the president, secretary-treasurer, Committee of Legislation and Transportation, Workmen's Compensation and Insurance, Membership, etc., will be presented. There will also be the appointment of committees, including a Resolution Committee.

On Wednesday, February 16th, at 10.00 a.m., there will be a business session, general discussion, etc. At 2.00 p.m. there will be the reports of special committees, election of officers and other matters. In the evening the banquet will take place, and every arrangement is being made for a splendid repast. One representative from each of the wholesale firms in Toronto and Ontario will be the guests of the retailers.

It is expected that Dr. A. C. MacKay of the Central Technical School, Toronto, will be present and deliver a talk on the function of the school, particularly so far as it affects the woodworking industry in machine and bench work. It is probable that arrangements will be made for the students, who are pursuing special courses at the school, to spend part of their time in practical work in the planing mills or sash and door factories of some of the retail lumber dealers. It is likely that a feasible arrangement will be arrived at which will supplement the course or the educational institution making it broader and more comprehensive.

Among those who will be invited to speak at the banquet will be Hon. E. C. Drury, Premier of Ontario; Hon. Beniah Bowman, Minister of Lands and Forests; Senator George Gordon of North Bay; W. J. Smith of Toronto, and others.

Local committees have been appointed by the Toronto retail lumbermen to carry out all the details, and no stone will be left unturned to make the forthcoming convention on Tuesday and Wednesday, February 15th and 16th, the greatest, most instructive and most helpful of any in the history of the organization.

The local committees are: Entertainment Committee—G. W. Boak, E. H. Stanners, T. A. Paterson, Alex. Rhind, W. B. Tennant, C. L. McCabe.

Reception Committee—E. I. Gill, F. J. Cummings, Edward Hines, J. S. Bond, W. C. Irvin and W. E. S. Savage.

Printing and Badge Committee—W. C. Laidlaw, T. E. Rathbone and George Reid.

The slogan of the convention is:—

"Now that we are going,
There's one thing you can do,
Just grab your fellow dealer,
And bring him there with you."

During the afternoon of Tuesday, February 15th, there will be an exhibition of moving pictures which will be put on by Seaman, Kent Co., Toronto, manufacturers of hardwood flooring. The films will depict the making of flooring from the tree to the finished product as laid in a ball room. There will be other pictures presented of an educational and humorous character.

In addition to entertaining the visiting delegates on the evening of Wednesday, February 16th, to a banquet at the Carls-Rite Hotel, there will be a theatre party on Tuesday night, February 15th, when all the retail lumber dealers at the convention will be the guests of the members of the trade in Toronto.

Largest Business in World Owned by One Man

Among the charters recently issued by the Federal Government is one to J. R. Booth, Limited, Ottawa, with a capital of ten million dollars. Heretofore the extensive lumbering, pulp, paper and other enterprises of the veteran Canadian captain of industry have been carried on under the name of J. R. Booth, but the style of the firm under incorporation has now been changed to J. R. Booth, Limited. Associated with him as directors are his sons, C. Jackson Booth and J. Fred Booth, Gertrude Fleck, wife of Andrew W. Fleck, and Wentworth Greene, solicitor, all of Ottawa.

For almost seventy years the firm which now merges into the joint stock company has been conducted personally by John R. Booth. It is understood that very little of the stock of the organization is held outside the Booth family.

It has also been said more than once that the firm of John R. Booth has for some years now been the largest business in the entire world operated as the property of one man. The veteran head of the company is 94 years of age and on the job every day. He is enjoying good health.

Canadians Secure Russian Timber Interests

A Canadian firm of timber operators and contractors, in which General Alex. McDougall and General W. B. R. Hepburn, late of the Canadian Forestry Corps, are partners, has been awarded one of the biggest timber concessions in the world by the Soviet Government of Russia. A recent despatch from Russia mentioned a contract which had been given a Canadian firm, and General Hepburn said today that it was his company which was thus indicated. The concession is one of the biggest, if not the biggest, on record, and if it were in any other country than Russia it would be worth many millions, but under the circumstances it is only a speculation. No attempt will be made, said General Hepburn, to work it until more stable conditions are established. Large areas of timber lands have also been bought by the firm in Latvia. After the sum of thirty thousand pounds has been paid down, the Latvian Government stepped in and confiscated the money, but after prolonged negotiations the Government has been induced to reconsider its action.

General Alex. McDougall, London, Eng.

General W. B. R. Hepburn, London, Eng.

General Hepburn also stated that his firm had a contract with the Soviet Russian Government to sell seventy-five million standards of Russian timber in the event of a trade agreement being concluded between the Allies and Russia. His firm's dealings, he added, have no connection with the Vanderlip concessions.

Problem of Reforestry Long Delayed

Reforestation of Northern Ontario and of the barren portions of eastern Ontario was urged by Hon. E. C. Drury, premier of Ontario, at a meeting held in Grant Hall, Queen's University, Kingston, under the auspices of the Kingston Agricultural Association. He stated at the outset of his address that he did not intend to discuss policies but simply wanted to lay before the people the great need of preserving forest lands and of the policy of the Ontario Government in this respect.

He stated that the time was not far off when Canada would be faced with a timber shortage and he urged as a remedy the reforestation of old desert lands in Old Ontario, as well as the reforestation of Northern Ontario.

"We have allowed," said Mr. Drury, "the northern country to be cleared of timber without regard to the future, and this, in addition to fire, has been rapidly wiping out forest lands. In many places even the soil has been destroyed, so that reforestation is made impossible."

The Ontario Government, in taking up the reforestation problem, he added, has taken an action too long delayed. The offer of the Government in the reforestation of lands in eastern and western Ontario, which was fit for nothing but timber, was that the municipalities acquire waste lands and the Government would reforest them at their own expense and carry them until the municipalities were ready to assume charge of the lands thus reforested.

Ontario Must Safeguard Her Forest Wealth

Dr. Howe Calls for Real Business-like Administration in Conserving Pulpwood and Other Timber From the Ravages of Flame—Prompt Action is Demanded

Editor, Canada Lumberman:—

I was much interested in your leader of January 1st, headed "Let Canada Keep Her Pulpwood—Export Her Pulp" and approve of it most heartily. So far, however, as it refers to me, I would like to call your attention to the fact that I cannot recall ever having made a prediction in public as to the length of time that pulpwood supplies will last. You heard my address at the Toronto meeting of the Woodlands section of the Canadian Pulp & Paper Association. There is nothing in that to indicate a prediction of future supply for the whole of Canada in any terms of years, and this question was not discussed after the reading of the paper, or for that matter, at any of the sessions, so far as I recall. I cannot imagine how any such statement got into the newspapers and why it was in the official report.

I do not say this because I want you to correct the statement. I believe that the pulpwood supply in terms of spruce is in danger of very serious curtailment in the near future if the pulp and paper industry keeps on increasing at its present rate. I would put the duration of adequate commercial supply at considerably less than 50 years. It seems to me that the question of future supply depends upon what turns up in the Hudson Bay drainage area and in Labrador. The virgin spruce-bearing areas this side of the height of land will be cut out at the present rate in a very few years, so that we will have to depend upon the far north country. It is quite evident that a very large percentage of that region has been burned.

As you know, no record is kept of the fires north of the Transcontinental, in Ontario at any rate. A man who was looking for timber limits down the Abitibi and Moose Rivers told me that he found the country swept by fire for a distance of 140 miles. He thought it was an extension of the 1916 Clay Belt fire. Every explorer who goes into the region reports extensive burned areas. The government reports on the District of Patricia indicate excessive burning of the forest. Five of the six explorers quoted use expressions like this: Burned at frequent intervals for the past 40 to 80 years down to the present year. It is very significant in terms of the future supply that, although these explorations extend through 20 years, each explorer mentions fires during the present year.

There is another point that people do not take into consideration when estimating timber in the north country, and that is, where the sedimentary rocks are exposed—in Ontario it is a belt from 50 to 150 miles wide, bordering on James Bay—there is practically no drainage. It is a series of swamps and peat bogs, where the trees are not much larger than a man's wrist and usually not over 10 or 12 feet high. Not only will the cost of production be exceedingly great in the Hudson Bay-Labrador region, but there are various engineering obstacles to be overcome in the rivers. As you know, the uplands are practically bare of forest and the snow on these, melts very rapidly in the spring, causing floods. I have been told by missionaries in the Hudson Bay region that 20 to 40-foot rise in the river in 24 hours is nothing unusual. I have also heard that lumbermen in the Hamilton Inlet, Labrador, had been put out of business by having their booms carried out to sea by such freshets. The other day I heard an interesting thing, bearing on this question, and that is the pulpwood operators in the Hamilton Inlet find that the fiber of the small, slow-growing spruce has a tendency to separate into the single fibre condition. It thus makes brittle and inferior paper.

I feel very strongly that there is no hope for forestry in this Province until we have adequate fire protection. There are hundreds of square miles within relatively short distance of markets in the Peterborough-Hastings-Renfrew region that have been burned and reburned until there is no hope whatever of the present day commercial species on them without artificial planting. They must be planted eventually and the work should be begun at once but it would be unwise to do so under the present conditions of fire protection.

There is little use of talking about conservation of pulpwood supplies when the Province allows over 900,000 acres of forest land to be burned in any one year, as was the case in the summer of 1919. Forest fires as recorded during the past three years have averaged to burn nearly half a million acres a year; a million and a half acres in three years; and there is no evidence whatever of a decrease in the rate through an increase in the efficiency of fire protection. The situation in this respect is deplorable and pathetic.

I believe that, if the public understood the real situation, it would demand earnest attempts to solve the problem. No matter how hard a forest fire-fighting organization may work, it can not succeed unless certain restrictive and restraining conditions are removed. And up to this time, so far as I am aware, there has been no public announcement that the Government is taking steps to remove those conditions.

I think, also, the lumbermen are becoming convinced that there must be adequate fire protection. If the Government does not give it to them, they will take it into their own hands, as they have done very largely in Quebec. Theoretically, it is the business of the Government to protect its own property, and I believe that fire protection could be made really more effective through one central organization than through a series of small independent organizations, such as would be the case if the lumbermen took over the protection. Adequate fire protection will always be more difficult in Ontario than in Quebec because of the nature of the forest, soil and geological conditions.

The chief argument against lumbermen doing this is that they are primarily interested in the mature timber. They probably would not and are under no normal obligations to protect the second growth on cut-over and burned-over lands, whose benefits they would never participate in commercially. From the standpoint of the State, these are the most important things to protect. There is much greater damage to the future productiveness of the forest by repeated fires on cut-over lands than by fires in virgin timber.

I believe that if a search-light were turned upon the situation, we could get effective protection in this Province by Government agencies. I wish for the next three months you could devote a page in every issue to propaganda on the necessity of real business-like administration of the fire protection service. As I said in the beginning, it will be only when we have adequate and reasonable fire protection that we can initiate any broad, conservative plans for the conservation of our forest wealth.

I read your editorials with a great deal of interest. You are doing a splendid work for conservation and intelligent use of our forests.

Sincerely yours,

C. D. Howe,

Faculty of Forestry, University of Toronto.

Ontario Will Sell More Pulpwood Limits

Hon, E. C. Drury, Premier of Ontario, recently announced that the Government would shortly advertise for tenders upon a number of limits, the largest a considerable pulpwood limit at Long Lake, in the Thunder Bay district, and the others smaller areas. It is not the intention to dispose of the limits right away, since the advertisements will probably announce the acceptance of tenders up to Jnue or July next. The intention of the Government, said the Premier, was to get the limits on the market, allow ample time for them to be cruised thoroughly by would-be purchasers, and then to see what they could be sold for.

The Premier intimated that in the disposal of future timber limits, attention would be given the need for perpetuating the timber wealth of he Province by the establishment of a forestry policy, which would be applied to limits sold to private interests.

Anti-Shingle Bill Withdrawn for Year

It is understood that the proposed Anti-Shingle legislation which, it was intended to introduce at the present session of the Ontario Legislature, has, at the request of the Ontario Fire Prevention League, been postponed until next session. It is stated that the Fire Prevention League gives as the cause for withdrawing in its agitation for such an enactment is the lack of education of the public concerning wooden shingles as a "fire menace." It is also reported that the League will, during the next few months, carry on a propaganda campaign along the anti-shingle line, and will seek to introduce a more stringent bill next year. Had the legislation gone ahead, the various lumber organizations and other bodies would have strenuously opposed the measure.

Pulpwood and Its Varied Activities

Provincial Company Secure Nipigon Limits

The Ontario Government recently granted the Provincial Paper Mills, Limited, Toronto, the Nipigon pulpwood limits consisting of 1,220 acres, located between Nipigon and Jackfish, and comprising practically the entire territory between the Black Sturgeon and Pic River limits. It is understood that the holdings contain a large amount of pulpwood of good quality.

According to the terms of the agreement, the Provincial Paper Mills must erect within two years a big paper mill at Port Arthur, where the company has operated a sulphite pulp plant of 60 tons capacity for several years. One of the terms of the agreement, which the Provincial Paper Mills Co. had to observe, is that the company agrees to supply all the book paper required by the Ontario Department of Education for school books for a period of 21 years, and it is also required to sell 15 per cent. of its book paper product to publishers in Ontario if they ask for it. It is further understood that the company will use a large amount of Nipigon power.

Seeking Pulp Lands in Far North

S. J. Hill and E. L. Napton, former students at the Syracuse, N.Y., University Forestry School have been on an exploring expedition through Northern Ontario and Quebec in search of suitable tracts of timber for the pulp and paper firm of James D. Lacey & Co. of New York City.

Early last fall with dog sleds and Indian guides they set out and followed the Minicougar River to its source, where they made their headquarters. From there they explored the territory for several hundred miles in every direction. The men camped for some weeks 100 miles north of Moose Factory, which was the recent landing place of the naval balloonists.

The men have brought back with them samples of the wood they found, and it is said that if it proves suitable for the purposes of the company, arrangements will be made immediately for the purchase of a tract of land more than 300 miles square in the extreme northern part of the Dominion.

Reports Business Keeping Up Well

At a time when optimism is at a premium, it is gratifying to learn from the Riordon Pulp & Paper Company, Limited, Montreal, that all their various plants have been running at full capacity, and that their operations have experienced practically no decline during the quiet business period. This is a tribute not only to the enterprise, but to the foresight of this well-known firm. The name of this company is too familiar to our readers to require an extended introduction. The firm operate or control pulp and paper mills at Kipawa, Merritton and Hawkesbury, in the province of Ontario, and Ticonderoga in the state of New York. Their lumber mills are situated at Ottawa and Calumet. It is a matter of very recent history that this company acquired the lumber properties of Gilmour & Hughson, Limited, and of W. C. Edwards & Company, Limited, Ottawa.

Serious Problem Now Facing the East

Mr. Robson Black, secretary of the Canadian Forestry Association, addressed the Kiwanis Club, Montreal, on January 13, on the question of protecting the forests and reforestation. Mr. Black declared that the problem of protecting and improving the timber areas of eastern Canada constituted the foremost consideration now facing the people of Ontario, Quebec, New Brunswick and Nova Scotia. Putting into the background for the moment the direct utilization of forests in the paper and lumber industries, he contended, that if the present swift decline of the forest possessions by fire were not arrested within a very few years, not only would the props be kicked out from under those industries, their towns, their army of employees, their bonds and stock, but the people of Canada would place beyond their own reach forest materials absolutely essential to the carrying on of agriculture, mining, fisheries, manufacture and maintenance of human life in this northern climate. Mr. Black also argued that there were immense areas where timber alone could be purchased at a profit.

The Pulpwood Resources of Alberta

While poplar predominates there are considerable areas of spruce timber that would be valuable for pulp manufacture, says an Edmonton paper. The great demand is for newsprint and newsprint must be made largely or altogether of spruce. But some poplar can be used for almost every other kind of pulp. F. A. Burrows, in a recent interview, spoke of the quantity of spruce pulp wood available on the upper waters of the Saskatchewan. Mr. Burrows is a practical lumberman of very many years' standing. He has limits on the upper waters of both the Saskatchewan and Athabasca. Mr. Burrows says:

"The vast drainage basin of the Athabasca was originally almost covered with spruce forests. Fires have cleared away a large part of the original timber. It has been succeeded chiefly by poplar. But there are still many spruce areas on the Athabasca waters that are available for pulp making as well as lumber. In all cases the presence of poplar adds materially to the total tonnage that could be derived from spruce alone."

May Cut Trees of Smaller Diameter

Recently Article 12 of the regulations of the Department of Lands and Forests of Quebec, was repealed and replaced by the following: Licensees are forbidden to cut on Crown lands trees less than 12 inches in diameter measured at the stump, two feet above the ground. However, they may cut spruce down to 10 inches, paper birch, balsam fir, poplars and aspen down to 7 inches, measured as aforesaid. Nevertheless the Lieutenant-Governor-in-Council may order that the present regulations be amended for the places indicated by the Forestry Service, after inspection.

It is further ordered to repeal a recent provision to the effect of charging an additional sum of 50c per M foot, board measure, for all wood cut except in exception to the regulation referred to above, owing to the difficulty of establishing the quantity of wood thus cut in exception, and also owing to the collapse of the lumber market on account of the world crisis.

Closer Co-operation in Paper Ranks

The fifth annual banquet of the president (George H. Mead, Dayton, Ohio,) of the Spanish River Pulp & Paper Mills, was held at Sault Ste. Marie recently and proved to be an enjoyable and most successful event.

Among the speakers were Hon. Beniah Bowman, Minister of Lands and Forests for Ontario, and Hon. Gideon Robertson of Ottawa, Federal Minister of Labor. The event was the happy culmination of the annual conference between the management of the Spanish River Co. and the heads of the departments from each of the three mills located at Sault Ste. Marie, Espanola and Sturgeon Falls.

President Mead, who presided, stated that the directors and management of the company had looked forward with confidence to the operations of 1921 and their expectations had been splendidly fulfilled. He was proud of the organization and said that the annual gathering was held for the purpose of bringing forth the policies and ideals for the coming year's work and also to engender a closer association with the men on whom the company depended for operations. He added that the company wished to instill into each man that the organization was trying to give honest returns for every dollar that it made. Continuing, Mr. Mead stated that the present production of the mills was 625 tons of newsprint daily, 500 tons of groundwood pulp, 230 tons of sulphite pulp and 40 tons of board, which represented 20 per cent. of Canada's production and 8 per cent. of the total output on the American continent.

Speaking later, Mr. Mead stated that the year before them might be a serious one. For the past eighteen months all had enjoyed exceptional prosperity, but in the readjustment they might be called upon to make sacrifices. He urged the employees to husband their resources. "Economy must be the watchword," he declared.

Col. Thomas Gibson, of Toronto, vice-president of the Spanish River Company, reviewed the history of the organization from its inception. In 1894 the first mill was built by F. H. Clargue, and was a groundwood one, having a capacity of 100 tons a day. In 1901 a sulphite mill was put up at the Soo, with a capacity of 8 tons a day. The newsprint groundwood and sulphite mills now at Sault Ste. Marie, are among the finest in the world. Mr. Gibson also referred to the establishment of the first plants at Espanola and Sturgeon Falls.

Hon. Beniah Bowman, Minister of Lands and Forests, dwelt upon the importance of surveying the timber resources of Northern Ontario.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Lumber Wanted

Blocks of Hemlock and White Pine; also Spruce for spring and summer deilvery. Box 462, Canada Lumberman, Toronto. 3

ROCK ELM AND ROCK MAPLE LOGS.

Will pay good prices cash for logs of our specification; also round birch logs; write us for particulars. Log Export & Import Co., 241 Beaver Hall, Montreal. 3

Wanted Lath

Prices on Hemlock, Pine and Spruce lath; delivered Detroit rate. Brewster Loud Lumber Co., No. 1307 Majestic Bldg., Detroit, Mich. 3-4

Wanted

4 foot Body Hardwood by the cord for firewood purposes, in any quantity. Advances made.

Toronto Timber & Cordwood Co., Limited,
24-3 95 King St. E., Toronto, Ont.

Wanted

ROCK and GREY ELM 3¼" thick suitable for bending purposes.

Quote prices to

The St. Marys Wood Specialty Co.,
1-4 St. Marys, Ont.

Lumber For Sale

For Sale

One carload cheese box veneer. C. A. Moses, Osgoode Station. 3-4

Baled Shavings

For sale at attractive prices. Send your enquiry to L. S. Barrand Planing Mills, Pembroke, Ont. 24-3

PILES FOR SALE—Norway Pine and Jack Pine Piles 30 to 60 feet. Wish to contract for a quantity of these, delivered on cars at Whitefish or on Vermillion River. Con. McGuire, Whitefish P. O., Ont. 24-3

Selected Trimmer Ends

8 to 10 cars White Pine Selected Trimmer Ends for sale. For prices and particulars apply JOHN B. SMITH & SONS, Toronto, Ont. 23-3

FOR SALE—3000 Cords of Mixed White Birch and Tamarac, ready for shipment 10th December, 1920, at Stone Siding, A.E.R., 28 miles west of Sudbury. For further particulars apply to C. G. Hyett, Worthington, Ont., Soo branch C. P. R. 24-5

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 6-t.f.

5/4 SPRUCE

We must move at once 77,000 ft. 5/4 x 4" & 5" Merchantable Spruce. Widths are separate. Wire or write for price.

Wilson & Greene Lumber Co.,
2-3 Syracuse, N. Y.

Dry Spruce

One Million Feet 1, 2, and 3" merchantable and culls. Also a few cars laths and shingles.

D. G. RHEAULT,
24-3 Mont Joli, Que.

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

4 Hospital St.,
3 Montreal, P.Q.

Machinery Wanted

WANTED—Two heavy log or lumber trucks. Box 257, Canada Lumberman, Toronto. 11-t.f.

WANTED—Hoop machine and combined round log lath machine.

Rolston, 591 Ingersoll Ave.,
3 Woodstock, Ont.

WANTED; 1 only six saw edger. Must be in excellent conditions. Also one circular saw grinder. Give name of manufacturer and price in first letter. Apply Box 459, Canada Lumberman, Toronto. 3-6

Machinery For Sale

For Sale—Locomotive

One 28 Ton 3 Cylinder 8 x 10 Standard Gauge Lima Geared. Located in Canada. Box 376, Canada Lumberman, Toronto, Ont. 19tf

Engines and Boilers For Sale

1—No. 3 Jewell Engine 10 H.P.
1—Leonard Clipper Engine 60 H.P.
1—Leonard 8" x 10" Ball Automatic Engine.
1—McEwan Automatic Engine 11" x 10" R.H.
1—60" x 14' Horizontal Return Tubular Boiler 42-4" flues, full C.I. front.
2—Horizontal Erie Return Tubular Boilers, 64" x 16', 54-4" flues.

The above are in good condition and can be inspected at any time. Apply to Box 433, Canada Lumberman, Toronto. 3

Second Hand Machinery

We have over $250,000 worth of used machinery of all kinds for sale. Suitable for mines, quarries, railroads, pulp and lumber mills, etc.

Everything carefully overhauled at our shops before shipped.

Send us your inquiries.

R. T. GILMAN & CO.,
19tf Montreal.

For Sale

1 four-saw Filer & Stowell edger, 1 ten-inch steam feed, complete with valves and piston rod, 1 used Waterous carriage, 1 friction clutch coupling, 14 in. diameter, 3 7/16 in. bore. Apply Bishop Lumber Co., Ltd., Nesterville, Ont. 3-6

For Sale

500 to 600 h.p. Harris Twin Corliss Engine, drive pulley 18 ft. dia. x 52 in. face; also main drive belt 90 ft. long; complete with or without condenser; will sell cheap before moving. Laurie Machinery Co., Ltd., 335A Craig St. W., Montreal, Que. 3-6

For Sale

No. 6 Linderman Automatic Dovetailer and Glue Jointer, heavy 4-side planer and matcher, 12-inch moulder, 4-side sash and door moulder, shaper, jointer, trim saw, power feed saw, planer, drum sander, band saw, other machinery. A J. Lindsay, 42 Gloucester St., Toronto. 3-6

For Sale

Waterous Big Champion Edger for six saws, Waterous Log Kicker 10 inch cylinder with arms all complete, Waterous Ratchet Set works, Two single bevel friction live roll drives complete. For further information apply Conger Lumber Co., Ltd., Parry Sound, Ont. 22t.f.

For Sale

One Edison Electric Light System running 300—16 candle power lamps.
Perfect condition $300.00
One Steam Engine, Bertram, 180 H.P., in good order $550.00
One 150 H.P. 13 x 27 x 30 Tandem Compound Wheelock Engine $1000.00
Large stock of electric motors of all descriptions at about 50% off value.

Apply L. S. Tarshis & Son,
402 Front St. East,
24-3 Toronto.

Wickes Gang and Engine

GANG: No. 12 Wickes Gang, 40" sash, 15" stroke, steam binder rolls, front and back in two sections, feed and oscillation combined, 1908 model, and has been in use for five years. We furnish with this gang 11 rolls for cants and stock, one filing machine, and 4 sets of saws.

ENGINE: Waterous engine, 125 H.P. rock valve cylinder 16 x 18", speed 200 revolutions per minute, intake 3½", exhaust 4½", fly wheel 6' in diameter x 22" face, balance wheel 7' in diameter x 7" face.

THE PEMBROKE LUMBER CO.,
1t.f. Pembroke, Ont.

MILES' BARGAINS

Wickes Gangs, 44", 40", 36", 26".
8' Garland band resaw.
8' Allis band mill.
7' Prescott band resaw.
Fischer slab resaw.
54" Mershon band resaw.
42" Invincible Sander.
No. 3C Mitts-Merrill hog.
Single band mill outfit complete.
3—72" x 18' 125 lb. Boilers.
500 KVA. Turbo generator, 480-60-3.
275 H.P. slip ring motor, 240/440-60-3.
20 x 42 Corliss engine.
1500 gal. Worthington fire pump.
14 x 14 x 16 Chicago air compressor.

MILES MACHINERY COMPANY,
1-4 Saginaw, Mich.

For Sale

One 10-inch four sided moulder; also one planer and matcher. C. A. Moses, Osgoode Station. 3-4

Situations Wanted

HARDWOOD INSPECTOR, under National Rules, wants situation. Go anywhere. Box 453, Canada Lumberman, Toronto. 2-3

WANTED

to commence work April 15th, a sawyer, for a left-hand circular mill, gunshot feed, steam nigger and loader. Box 464, Canada Lumberman, Toronto. 3-6

Young Man, 29, with 10 years' experience in the Lumber Business, who can furnish a good recommendation, desires a position in an office where the are good prospects for advancement.
Box 447, Canada Lumberman, Toronto. 2-3

Young man, 27, several years' general office and accounting experience, desires employment in lumber camp, preferably where his duties require him outside, such as scaling and working in the bush. Box 432, Canada Lumberman, Toronto. 1-3

YOUNG MAN, married, having twelve years' experience in the Pulpwood and Lumber Business on the North Shore Province of Quebec, wishes a change as Supt. in same line, free of present employment next spring after one month's notice. Box 466, Canada Lumberman, Toronto. 3

Young married man, 24, sober, both languages, five years' experience, desires employment with a lumber firm, preferably where he will travel, such as scaling and shipping lumber and pulpwood. Will go anywhere in Quebec or Ontario. Can furnish good references. Box 446, Canada Lumberman, Toronto. 2-4

Situations Vacant

MAN, experienced in scaling lumber, general logging and lumbering; pleasant surroundings and considerable travelling; good wages for capable man; needed immediately. Box 39, Kinmount, Ont. 3

WANTED—Young man with knowledge of both northern and southern pine and hardwood lumber to travel in Ontario; state age, qualifications and salary expected. Apply Box 455, Canada Lumberman, Toronto. 3

WANTED: Chief Draftsman by concern manufacturing very extensively, Sawmill and Pulpmill Machinery, Boilers, Engines, etc. Only those with suitable experience need apply.

Waterous Engine Works Company, Limited,
2-5 Brantford, Ontario.

SALESMAN WANTED—Toronto wholesale lumber firm requires the services of first class salesman for Ontario. Must have a good connection with the retail trade. Salary and percentage of profits. Exceptional opportunity to right man. Applications will be confidential. Apply with details as to experience. Box 454, Canada Lumberman, Toronto. 3

Wanted

Thoroughly competent accountant with executive ability, to take charge of branch office at our logging centre at Millertown, Newfoundland. Must be able to handle camp costs and set of double entry books, comprising accounts for logging, transportation, supply depots, etc., reference required. Apply, giving full particulars of experience and stating salary required to Chief Accountant, The Anglo Nfld. Development Co., Ltd., Grand Falls, Newfoundland. 3

WANTED—Thoroughly experienced sawmill men for large, fast mill, for coming season, including foreman, millwrights, band saw filer, sawyers, setters and trimmermen. Only thoroughly experienced and capable men need apply; state age, experience and wages expected. Address 460, Canada Lumberman, Toronto. 3-6

WANTED: At once—Capable man with sawmill to cut one million feet mixed timber. Apply Seneca Lumber Co., c/o Percy E. Heeney, Kitchener, Ontario. 3-4

TRAVELLING LUMBER SALESMAN WANTED. To cover Quebec, Eastern States, Ontario and part of Nova Scotia. In Nova Scotia to sell all lines of building material and in other places dressed Spruce. Some knowledge of architecture would be valuable in Nova Scotia. Write immediately giving full particulars, age, experience, references, salary expected and how soon position could be taken. Box 471, Canada Lumberman, Toronto. 3

Business Chances

WANTED—To purchase Portable Saw-Mill, about 15 M. daily capacity, with ample power, or will contract for full season's sawing, nice Jack-Pine and Spruce, with opportunity to continue if satisfactory. Box 465, Canada Lumberman, Toronto. 3

Wanted

A sawmill, equipped with circular saw, log carriage, edgers and trimmers, for re-sawing timbers; state full particulars and price. S. L. Lambert, Box 882, Welland, Ont. 3

For Sale

Retail lumber yard, saw and planing mill, good business established for 20 years, in an excellent village of Southern Ontario. Would sell sawmill separate. Box 469, Canada Lumberman, Toronto. 3

Pulpwood 1921-1922

Firm in Northern Ontario is in a position to offer from 20,000 to 40,000 cords Spruce pulpwood yearly, both Winter and Summer delivery, for a number of years. Also large quantities of Poplar pulpwood. All exportable. Would consider proposition as Agents for U. S. Mill. References.

Apply Box 470,
c/o Canada Lumberman,
Toronto.

Lumber Property For Sale

About 8,000 acres (held in fee) of lumber lands estimated to contain about 30,000,000 sp. feet of merchantable soft wood.

As a pulp wood proposition, this property should contain 60,000 cords or more.

Included with the lands, is a saw mill, equipped with Dutch furnaces, Waterous edger, planer and lath machine, and situated along the line of the C. N. Railway, the port lies within three miles of the mill, so that water shipments may be made as well as rail.

All the lands are within easy distance of the river, and stream driving does not exceed a distance of more than six miles.

For further information apply to

E. A. SMITH,
Shediac, N. B.

23t.f.

For Sale

Planing Mill on Canadian National Railway Lines, between Levis and Mont Joli, doing a Milling In Transit business, working night and day, with work ahead, guaranteed for several months at profitable prices. Fully equipped with planer, sticker, ripper, re-saw; handling several cars daily, with siding capacity of five cars, which is shortly to be extended to nine cars capacity; right in the heart of lumber section where more than ten times mill's capacity has been refused due to over-taxing of mill. Mill built of cement with cement floor, with additional buildings for Sash and Door Factory or Box Factory attached, and sheds for piling, also with piling ground for around half of million feet of lumber. Sellers will guarantee work several weeks ahead. Price $30,000.00, on terms that will be satisfactory. A live man or group of men can easily clean up $20,000.00 a year net profit, and mill can be extended for increased business very easily up to ten cars per day. Principals only. If interested write to Box 430, Canada Lumberman, Toronto, Ont. 24-4

Manufacturers, Attention!

The best location in Northern Ontario for sale, suitable for the manufacture of Fruit Barrel staves and heading, Fruit Boxes, Fruit Baskets—in fact wooden containers of all kinds; abundance of timber. Would sell outright, or would form company and take bulk of sale price in stock. Apply in first instance to Box 456, Canada Lumberman, Toronto. 3-4

For Sale—Pulpwood Rights

We control several high-class freehold properties on rivers entering into the Atlantic Ocean, containing large quantities of Spruce Pulpwood. We would sell outright, or stumpage rights and agree to deliver the wood on vessels. Address Box 458, Canada Lumberman, Toronto. 3-6

Balsa Wood Lighter Than Cork Durable as Cedar

Balsa Wood, growing notably in Costa Rica and Equador, is the lightest wood known, weighing only 7.3 pounds to the cubic foot. Cork weighs 13.7 pounds. Growing more rapidly than almost any other form of tree, it is said that within four years a balsa tree will attain the height of 30 feet, with a diameter of ten inches. It is as durable as cedar.

The wood is a white, extremely straight grained and easy to work. It is soft when green, but seems to harden later. It is used extensively for making rafts and life preservers, and it is thought that it will eventually constitute a valuable source of pulpwood. A brown-colored cotton-wool, commonly used for stuffing pillows and mattresses, is also produced.

It is believed that the tree would flourish in Florida, and because of its rapid growth would spread rapidly over the southern part of the state.

Oak Lasts For Centuries

In driving a new gallery in a gold mine at Victoria, Australia, at a depth of 300 feet, pieces of oak timber were found perfectly preserved and with the appearance of having been sawed and shaped by man. The timber lies in an ancient river bed.

Just before the war it was discovered in Russia that the bed of the Moksha river, for a length of 400 miles, was full of magnificent oak trees.

Oak has the peculiar property of lasting for centuries when buried in water or wet sand. Oak piles from bridges constructed by the Romans have been found to be as sound as when placed, nearly 2,000 years ago.

Pulp resources in Northwestern Manitoba will remain undeveloped until means of transportation are established, F. H. Terchmer, inspector of Dominion forest reserves, said on his return from a forest inspection trip in the district northeast of Norway House. He reports a good quality of spruce is found which would make excellent pulp, but there is no outlet for the finished product, the rivers being unnavigable except by canoe.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

Paper Industries Had Splendid Year

Representatives Gather in Montreal—Decide to Inaugurate Technical Research Department

The Canadian Pulp and Paper Association held the annual meetings of the association and of the various sections, in Montreal, on January 19, 20 and 21. The meetings were largely attended.

At the annual meeting, on January 21, the reports of the sections were submitted. These indicated that the industry as a whole had a successful year, although in some directions the very high prices had not been maintained.

In his address, the president, Mr. G. Chahoon, Jr., referred to the action taken by Price Bros. & Co., Ltd., in connection with Government control of newsprint and stated that the association and industry were under obligations to Price Bros. & Co. and, to Sir William Price in particular, for their courageous action in bringing the question to an issue. The question of the conservation, proper administration and perpetuation of our pulpwood supplies continued to be one of the most vital, affecting the industry. The provincial governments of Quebec and Ontario had recently revised the regulations under which their Crown lands are administered, not only with a view to enlarging their revenue therefrom, but also with that of ensuing a continuity of the supply of pulpwood. The association executive and particularly the Woodlands Section, under the able guidance of

George Chahoon, Grand Mere, P. Q.
Retiring President of C. P. & P. Assoc.

P. B. Wilson, Sault Ste. Marie, Ont.
Newly elected President of C. P. & P. Assoc.

Gen. J. B. White, had co-operated in these efforts. The Executive Council felt that there was a great need of educational work among the people of the several provinces in connection with the securing of proper, effective and adequate legislation for the protection of the forests, and the perpetuation of the wood supplies. In proposing such legislation, the association realized that they had certain obligations of their own to perform, one of which was to assist in building up as far as possible a public sentiment that would support the several provincial governments in enacting this legislation and in giving it due effect. As one means to this end, the Executive Council proposed during the coming year to send a representative of the association to Northern Europe to gather information regarding forestry conditions there and to supply the information so obtained to the newspapers and periodicals of Canada, and thereby to assist in convincing the people of the Dominion that it was to their interest, no less than that of the association, that progressive forestry legislation should be enacted, and that the proposed regulations should be made effective.

The meeting decided to take measures to inaugurate a department of technical research, following the report of a special committee which had investigated the subject. Originally the association offered to contribute towards the superintendence of the Forest Products Laboratories, but the Government did not approve of this. The committee was of opinion that the laboratories do not function so as to give the maximum benefit to the industry, and it was, therefore, proposed to establish a department of the association. The idea is to appoint a director of research, with a staff, who will look over the entire field, and co-ordinate the work, preliminary to establishing a laboratory. For this purpose a sum of $35,000 will be set apart for the first year. It was stated that practically all the companies had approved the project and promised every co-operation. The proposed director of research will inquire into the use of the various woods for the industry, and the co-ordination of the experimental departments of the various companies. The committee recommended that the association co-operate to the fullest degree with the Canadian Council of Industrial Rerearch in the furthering of the project of the proposed National Research Institute.

The new president is Mr. Percy B. Wilson, vice-president and general manager of the Spanish River Pulp & Paper Mills, Sault Ste Marie, and the new vice-president, Mr. G. M. McKee, general manager of the Donnacona Paper Company, Ltd., Quebec.

In the afternoon, a luncheon was held at the Ritz-Carlton Hotel, at which General Sir Arthur Currie spoke on the relation of the pulp and paper industry to higher education. The annual dinner was held in the evening, at which Sir Henry Drayton, Minister of Finance, and the Honorable W. Mitchell, Provincial Treasurer, were the chief speakers.

Good Pulpwood Supply in Alberta

T. A. Burrows, owner and manager of the Pheonix Lumber Co., in Manitoba and Saskatchewan, who has just been awarded a contract for a supply of 250,000 ties for use on the National Railways, states that there is plenty of pulpwood in Alberta. along the Saskatchewan River, west of Edmonton, to warrant the construction of a large mill in the near future. He pointed out, however, that before these rich lumber resources could be utilized, it would be essential that power be developed along the Saskatchewan River at Rocky Mountain House or some like favorable location. Commenting on this important phase of this industry, Mr. Burrows said: "The development of the pulp industry has conclusively proven that water power is necessary to make the same a success and it is my opinion that there is plenty of water power to be harnessed on the Saskatchewan River. I am also quite sure that there is an abundance of pulpwood along its banks, which, if utilized, would add a valuable industry to this province."

Lumber Not to Blame, Say Dealers

The Southwestern Ontario Lumber Dealers' Association was in session recently in Chatham for the purpose of discussing the present high costs of building material.

It was felt that the lumber dealers are not wholly to blame for the high cost of building construction, as on the average, lumber does not exceed more than from 15 to 20 per cent. of the cost of buildings to-day. A number of dealers were of the opinion that the high prices paid to labor in the past had a great deal to do with the high cost of building.

Geo. H. Belton, of the Belton Lumber Company, London, presided at the meeting.

Quebec Limit Holders Elect Officers

The Province of Quebec Limit Holders' Association held their annual meeting in Montreal on January 20th, when the following officers were elected: President, Mr. W. G. Power; vice-presidents, Mr. A. J. Price, Brig.-Gen. White; executive committee, Messrs. John Black, H. Biermans, Arch. Fraser, Wm. Russell, Angus McLean, S. L. De Carteret, Geo. Chahoon (Jr.), D. Champoux, F. I. Ritchie, G. M. Stearns; auditor, Mr. F. B. Murphy; secretary-treasurer, Mr. P. G. Owen.

The directors of the Canadian Forestry Association at a meeting held in Montreal on January 20th, decided to show their appreciation of the work of Mr. Robson Black, the secretary, by making a substantial addition to his salary. At the annual meeting of the association the president and several of the speakers referred in appreciative terms to the great work done by Mr. Robson Black, who was described by the president as the dynamo of the association.

Big Increase in Lumber Cargoes

Lumber exports by water from the Lower Mainland of British Columbia in the year 1920 reached a total of approximately 90,000,000 feet, an increase over the 1919 shipments of between 25 and 30 million feet. according to figures given out by the port authorities of Vancouver. A rough total of the 1920 exports, which included lumber manufactured not alone in Vancouver, but by Fraser River and Fraser Valley mills and shipments from even island points received by scows at Vancouver for reloading on ocean carriers, set the figure at 89,792,241 feet, divided as follows:

Australia	29,791,173 feet
Orient	22,745,696 feet
India	3,800,000 feet
United States	2,030,000 feet
United Kingdom	30,346,372 feet
South America	1,079,000 feet

New Westminster lumber men estimated that the total British Columbia export by water during 1920 was from 120,000,000 to 125,000,000 feet, the Vancouver estimate being the 120,000,000 feet.

Quebec Housing Act Will Be Revised

Municipalities Have Found It Practically Impossible to Comply With the Conditions

The Quebec Housing Act, from which a great deal was expected, has failed to produce results in the larger cities of the province. According to the report of the Provincial Treasurer, 34 cities and towns have benefited from the Federal grant, and about 280 houses have been built. Chicoutimi, Drummondville, Sherbrooke, Grand Mere, and St. Lambert are among the municipalities which have secured loans. It is reported, however, that although 34 municipalities have applied for loans, the money has not been taken up by the whole number, as the conditions of the loan have been found practically impossible to comply with.

In Montreal nothing has been done. The Administrative Commissioners, to whom was allotted a million dollars, have declined to proceed with a scheme on the ground that the act is not suitable to large cities, is in fact unworkable. The history of workmen's dwellings in Montreal is one of interminable discussions, delay and muddle. The original act was amended at the suggestion of Montreal, but it failed to accomplish what was aimed at—the erection of workmen's dwellings.

The crux of the question rests on the building of duplex houses. The Quebec Act, in its amended form, allows this, but unfortunately the conditions of the grant laid down by the Federal Government will not permit this form of construction, and as the Federal conditions are paramount, it follows that the Quebec legislation on this point is of no value. It is contended that in Montreal the cost of building is so high that an artizan cannot take advantage of the act; and that the only way in which he can build is to put up a duplex house, renting one section in order to help pay the interest and repayment charges.

With a view to get a practical scheme, a committee representing various public organizations is now at work. The idea is to plan along lines independent of the Federal Government grant. It is to be a purely provincial scheme, which will allow of duplex houses. The Provincial Government is to be asked to grant $20,000,000, the amount of the loan to any municipality being in proportion to the population and needs of the municipality. The loans are to be made for a period not exceeding 31 years and at a rate not beyond 5 per cent. It is also stipulated that the money may be advanced to a municipality, housing societies, associations or companies, or individual owners of a lot or lots. The maximum loan on each building is not to exceed 75 per cent. and the maximum amount is to be $6,000.

If one may judge from remarks by Mr. Walter Mitchell, the Provincial Treasurer, there is practically no hope for any such scheme as is favored by the committee. He denies that there is a shortage of houses in Canada—there is in the cities, but not in the country. Government-aided schemes of this kind, he said, had been tried elsewhere, but there was no place in the world in which they had succeeded. A measure of success had come only in cases in which land was owned by a philanthropist who was willing and able to be out of pocket over the scheme, and to shoulder the responsibilities which grew out of such a project. "If the Government lends money to one community they must do so to any one who demands it, and where will be the end?" asked Mr. Mitchell. Home building is a matter for private capital, which will flow into it in proper time. If it is not sufficiently of a sound business proposition for private money, it is not for the Government, which has to take care of the expenditure of public monies."

Lumber Retailers Confer With Woodworking Firms

A meeting of the manufacturers of doors and sash and a representative committee of the Southwestern Ontario Retail Lumber Dealers' Association, was held in Toronto recently in regard to the matter which had been under discussion for some time, viz., the action of the manufacturers in supplying certain mail order and catalogue houses with part of their output. It was declared that by so doing, the manufacturers are not distributing the product through the logical and legitimate channels, and it was felt that it was only necessary to draw their attention to this in order to have the grievance complained of corrected.

The committee from the Southwestern Ontario Retail Lumber Dealers' Association was composed of Messrs. Hadley of Chatham, Scofield of Windsor, Wallace of London and Clarke of Glencoe. There were four or five woodworking firms represented, and it is expected that as a result of the conference, which was a friendly one, an adjustment will be reached in regard to the question which has arisen owing to the woodworkers supplying mail order houses who use certain lines as a bait in order to induce the home builder and the contractor to buy from them; and then the purchasers frequently expect the local retail lumber dealer to come in and make good any deficiency, shortage or delay. The lumber dealers say that they are no longer going to be made the "goats" of certain persons who patronize these mail order houses as they are in a position to give the consumers equally as good service and sell them doors, sash, interior and exterior trim. at equally as reasonable figures as mail order houses. The local dealer also has the advantage that he is known, his stock can be seen, he is a resident of the community, his service is prompt, and if there is anything wrong or the material not up to the mark, he is prepared to make it good in every sense of the word.

Unloaded Cargo in Record Time

The H. R. MacMillan Export Co. of Vancouver, recently shipped a large consignment of sleepers and crossings on the vessel "Topa Topa" to Immingham, Eng. The cargo was unloaded by the stevedores in record achievement. The actual working time occupied in discharging was 75 hours, which means an hourly average of 55,500 feet b.m., or well over half a million feet per day.

While some owners in England have been complaining about the dilatory discharge of cargoes in that country, it is interesting to note that, at least, the conditions in one part of the United Kingdom are in such a shape as to permit of rapid unloading, which stands out as unique since the outbreak of the war.

Moving Pictures of Busy Pulp Plant

The pulp and paper companies are making more and more use of moving pictures as a method of educating the public as to the features of the industries. At the annual meeting of the Canadian Pulp & Paper Association, in Montreal, the Riordon Pulp & Paper Company exhibited a five-reel picture of the Kipawa plant, showing how high grade bleached sulphite pulp is made. Price Bros. & Company, Limited, also showed a film entitled "From the Forest to the Press." This illustrated in particular the company's newsprint mills at Kenogami, P.Q., and also showed the company's lumbering and other operations.

Have Confidence Says Progressive Dealer

Speaking of the present outlook in the retail lumber arena and the condition of stocks, Mr. J. B. Mackenzie of Georgetown, said: "The point we wish to impress on the prospective builder is that the prices we are asking are as low as they will be for this year and also that lumber, being a commodity in which costs are largely made up of freight and labor, there being no extra reserve stocks on hand, conditions do not point to any further reductions in price."

Mr. Mackenzie thinks that he will shortly put on an advertising campaign, explaining the conditions referred to, and show that the cost of lumber is only about 30 per cent. of the total outlay of the average residence and that lumber has been reduced to a greater per cent. than labor, cement or brick.

"The lumber merchant, to my mind," continued Mr. Mackenzie, "is in a different position to the clothing merchant, as we are dealing with people who have more or less of a financial standing and not with the new rich working man or woman upon whom the clothing merchants have to depend for their trade. The absorption of all the bond issues and the advance in Victory bonds would show that the lumber-buying public have money on hand. We also know that many of our farm customers have money on hand to make deferred improvements on their places, and after the first effect of the reduction of prices on farm implements has passed, they will gain confidence and go ahead with necessary alterations and additions which have temporarily been held up. "In a word, if we all have confidence, this year will be a good year for the retail lumberman."

Breezy News Notes of the Industry

C. O. Maus of the Hyde Lumber Co., South Bend, Ind., has written to a number of his friends in Toronto, stating that his company has decided to absorb the exchange on all new business in connection with Canadian trade.

The unemployment situation was recently relieved in Hull and Ottawa through the level in the Ottawa River rising rapidly owing to late rains. This resulted in the re-opening of the pulp, paper and sulphite mills, and 500 men, who had been out of work, are once more employed in the J. R. Booth and the E. B. Eddy Company's plants.

The LaCloche Island Co., Limited, with headquarters at Little Current, Ont., and a capital stock of $1,000,000, has been incorporated to carry on the business of manufacturing and dealing in timber and lumber, to own and operate barges, tugs, etc. Among the incorporators are Chas. W. Graves of Marion, Mich., and S. H. Person of Lansing, Mich.

Galbaduk
TRADE MARK

The Standard Water and Mildew Proof Fabric for Horse Covers, Tarpaulins, Etc.

Galbaduk is entirely manufactured in our own factories, both the cotton canvas and the waterproofing process, from the cotton fields through our plant to the consumer.

Absolutely water and mildew proof and cheaper than any other waterproofed duck or canvas on the market today.

Suitable for covering all kinds of building materials, cement, sand, lumber, motors, machinery, boat hatches, hay stacks, new sidewalks.

Review of Current Trade Conditions

Ontario and the East

Business in the lumber line continues quiet, although there is a better feeling prevailing than there was a few weeks ago. The number of inquiries are increasing, more car loads sold, and a greater measure of confidence prevails. This, it is expected, will increase as the spring and summer months approach.

No one cares to make any prediction regarding 1921, but there is a settled conviction that matters will improve as each month goes by. One leading member of the trade stated recently that he was inclined strongly to the belief that the last six months of the year would be far better than the first six months. Much will depend upon the building programme in the various cities and towns and the attitude of labor; whether it will come forward with extra demands or be content to continue at the present wage schedule.

Conditions in the trade were well discussed at the meeting of the Canadian Lumbermen's Association, held recently in Ottawa, and the general attitude of the industry was reflected ably and well in the sane, conservative address delivered by President McLachlin, which is worthy of perusal.

Everyone connected with the lumber business is disposed to believe that 1921 will prove a fair year, although it is not anticipated that there will be any record turn-overs, the same as in 1920, which was one of abnormal production and demand, particularly in the early months. The cut this year will be decreased, and it is not likely that buying will be carried on to the unprecedented extent as last year. Production and consumption will thus be equalized to a certain degree, which should all tend toward stabilization of values and sound, economic conditions.

There are no pessimists in the lumber business to-day. While all admit that trade is quiet, they point to the prospects which are brightening from day to day. Travellers report that retailers are disposed to stock up a little more than they have, believing that prices have reached their bottom, and if there is any change from this out, it will be in the direction of an upward trend.

Some few carloads of B. C. stock are moving, and one firm writes:—"Yes, we have closed down our mill, like many others. Our stock is altogether too heavy to carry at the present time, and we want to get it down to normal. We have five or six more million feet in the yard than we should have, and it is all high-cost lumber. We prefer to take our loss now rather than later on. By converting our stock into money, we can use the wherewithal to start operations again and at a lessened cost of production on which output we hope to make a profit. There is no use going ahead just now and piling up lumber at a figure which means more in manufacturing costs than in the way of receipts. We believe that any firm, which takes its loss now, will take a smaller one than by holding on. We are also of the opinion that when lumber is again manufactured, the outlay will be considerably reduced owing to the decline in wages in the bush and at the mills and greater efficiency on the part of labor."

Concerning the future a leading wholesaler stated this week that further recessions are not likely to be seen, except in a few cases when financial pressure may force slaughter sales. The large proportion of stocks are now held in fairly strong hands, who do not see their way clear to cut prices further. He was of the opinion that those requiring lumber for building or other purposes would be well advised to buy for their immediate needs now. Buying ahead in large quantities is a condition which is not to be desired, as, with stocks not large and production comparatively low, it would be almost certain to result in causing keen competition among buyers, with consequent sharp advances and conditions similar to those which existed a year ago. At the same time, if the buyers' strike should continue, present stocks are liable to become gradually depleted and production, receiving no encouragement, would fall off, resulting in a dearth of material when eventually the public did re-enter the market. This again might result in an unnatural inflation of values. Moderate buying, with no attempt at speculation, and a stabilization of prices and conditions as far as possible is what the industry generally would like to see.

United States

Trade generally continues dull throughout all the lumber centres across the border, although in some districts there is a market improvement. It is expected that business will pick up materially by early spring and there is a decidedly better feeling prevailing than there has been for some time past. If assurances are given that there are no labor troubles, many building projects will, no doubt, be proceeded with. Prices are still weak on a number of leading woods, but will, no doubt, strengthen as demand improves.

The most conspicuous feature of 1920 was the decline in residential construction, which in 1919 represented 33 per cent. of total construction and in 1920 only 20 per cent. The amount of residential floor space cotracted for, declined from 240,00,000 square feet in 1919 to 136,000,000 square feet in 1920. In the amounts of money involved in 1920 contracts, industrial plants and public works and utilities both exceeded residential buildings, each representing about 23 per cent. of the year's total. There was in 1920 an increase over 1919 in actual volume of construction of educational buildings.

In normal years the total estimated cost of contemplated or projected work reported is about 50 per cent. in excess of the total amount of contracts awarded. In 1919 the total or projected work was 68 per cent. in excess of contracts awarded and in 1920 it was 92 per cent. in excess of the contracts awarded. These figures give an indication of the amount by which each of the two years has run behind its announced construction programme.

A volume of construction equal to that of 1919, on a cost basis somewhere near the 1919 level, may be given as the most reasonable forecast for 1921. In money this would involve about two and a half billion dollars for the twenty-five states in the north-eastern part of the country, the same as the figure for 1920, though on a cost level that should represent a volume approximately one-third greater than the 1920 volume of construction. Should conditions develop so favorably that the full demand for construction may assert itself, the end of the year might possibly show a total of as much as three billions for the twenty-five northeastern states. Developments of the next three months will probably tell the story.

A six per cent. increase for 1920 operations over those of 1919 is shown by building permits officially issued and reported by the American Contractor. The total amount of permits for 1920 from 194 cities was $1,511,489,459 and the permits numbered 417,287. The total amount of permits in the same cities for 1919 was $1,428,423,683.

In the early months of 1920 the high records of 1919 were exceeded. In March, permits from 203 cities totalled $159,085,909 in valuation. In April permits from 200 cities totalled $199,155,821.

Great Britain

Reports issued by a well-known importing firm of Liverpool show that the stocks of New Brunswick and Nova Scotia spruce and pine imported during the month of December were only 700 standards, which were less than in either of the two previous years. The consumption in Liverpool was 1,700 standards, showing a decided increase over both 1919 and 1918. The stocks on hand were very heavy, so far as Liverpool was concerned.

In Manchester the importation of spruce was larger than in either 1919 or 1918. The consumption in that city was also very heavy, being 4,670 standards for December. The stock on hand was twice as great as at corresponding periods last year.

The combined stocks in Manchester and Liverpool for spruce to-day stand at 34,850 standards, 900 loads of birch logs and 1,599 standards of birch planks.

In the annual review made by another firm, some interesting figures are given along with a forecast of the future. Speaking of mahogany, it is more than usually difficult to make any predictions. The position as regards stock on hand and in prospect is quite healthy, but there is uncertainty in regard to the demand. Continuing the firms say, since April, when the bank rate was advanced to 7 per cent. and the banks commenced to restrict credits, the demand from consuming circles has fallen away rather seriously, whilst that from dealers and yard-keepers has suffered from the fact that they have not been in a position to carry anything approaching what would in pre-war days have been regarded as normal stocks. The demand is also adversely affected by the re-export of logs to the continent of Europe and the exportation of manufactures, especially furniture, having been seriously curtailed by the instability or unfavorable position of international exchanges. While these conditions continue, it is scarcely possible for the demand to develop in a really satisfactory manner, but even if it remains at the present low level. there is, in view of the moderate stocks on hand and in prospect, no reason to anticipate any serious fall in values.

In regard to the American hardwood market, the following timely observations are offered. The rise in values which was confidently pre-

dicted at the end of 1919, actually took place as soon as business opened in January last, and for two months substantial increases in values for practically all descriptions were recorded, but March saw the end of the upward movement, and although for some time thereafter no serious fall took place, prices during the latter half of the year sagged continuously. The cause is to be traced not so much to excessive stocks, although there was a rather plentiful supply on hand when the year opened, or to too large an importation, for the quantity brought in was actually extremely moderate, but rather to the lack of anything like a normal demand from consuming circles. Whatever other reasons there may be to account for the reduced demand, it is significant that the first signs followed very quickly the concerted action of the banks in regard to restriction of credits, and from this it may be inferred that a portion at any rate of the active demand which was experienced early in the year was probably due to the undesirable element of speculation. But there is little doubt that the financial situation, including dearness and scarcity of money, the reduced purchasing power of the community consequent thereon and the instability of exchage rates, is chiefly responsible for the contraction in the consumption which is still so noticeable.

In spite of the very light importation there are considerable stocks still available on this side, consequently, except in the case of special lines, very little business for forward delivery has taken place for several months past, and even the reduced quotations which shippers have lately been making have rarely resulted in contracts. Until the demand gives decided indications of more activity no improvement in the situation can be expected.

Whitewood.—Planks and Boards.—The stock brought forward from 1919 was small and soon found buyers at full prices. During part of the year there was a steady enquiry for prime grades, but lower qualities found decreasing interest and sales were difficult to effect. At the present time there are moderate stocks on hand, but the demand is very inactive; for forward delivery shippers are now prepared to accept lower prices, but little business is being done.

Stocks of quartered oak were generally light and prices ruled high during most of the year, but in the autumn some weakness in values became apparent. The importation was small, due partly to the high figures which were demanded and partly to the competition now being experienced from both Japanese and European products. Considerable stocks in plain oak were brought forward from 1919, but there was a good demand during the early part of the year and large quantities changed hands at advancing prices. About May the enquiry became less active and prices commenced to weaken, and since then business has been difficult, although a certain amount of trade took place in one-inch stock of 1st and 2nds and No. 1 Common grades. The amount of stock now being carried is by no means excessive, but it suffices for the present sluggish demand. Shippers should remember that in addition to the competition from English oak, which has not been without effect on the demand for American wood, there is now the further competition to be met from Central Europe, which has been made possible by reason of the position of exchange rates.

The commoner St. John, N.B., spruce is most plentiful in the country, and for this, prices are very erratic, because there have been for months past sellers who desire to place their goods almost irrespective of other considerations. Of course, the incubus of the Associated Importers' stocks has clouded the prospects of the spruce market all through this year, and even now it is affecting business because of the threatened auctions. The trade has seen the result of large auctions this month both in soft wood and ply-wood, and spruce stockholders with large stocks have not dared to wait, in case a further drop should occur. Quebec spruce in good condition is in a different category. There is not so much of this about, and considerably better prices can usually be obtained.

All the trade knows the main reason for the absurdly low figures which have sometimes been accepted recently for soft wood—simply the need of ready money on the part of the sellers.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Halifax Trade is Quiet With Yard Stocks Light

Since the beginning of the new year the lumber market here has not shown any appreciable change for the better, says the Halifax, N.S., correspondent of the "Canada Lumberman," and while it is generally felt that the time can not be far distant when business must resume its normal course, lumbermen seem reluctant to make any extensive committments for the coming season. As a result, many manufacturers, who ordinarily have their cuts sold before this time of year, and received cash advances for carrying on their woods' operations, have had to close down. In the past an operator would look around before closing a contract in an effort to secure the highest price going; this year the difficulty seems to be to find a purchaser at any price. A buyer with ready cash would probably not find it very difficult to persuade some of the smaller manufacturers to accept considerably less than $30.00 for an ordinary specification of spruce.

Back in October and November it was predicted by those competent to form an accurate estimate that the output of logs during the winter would provide for not more than about 50 per cent. of an average cut. It is now estimated that this year's production of lumber will not be in excess of 25 per cent. This serious curtailment in one of the most important industries of the Province is working considerable hardship, the immediate result of which is the throwing of a large number of men out of employment. The whole effect may not be fully appreciated until later in the year.

Wages have dropped about 25 per cent. below last year's level, and the cost of supplies, such as food and logging equipment and mill supplies somewhat more than this. Ordinarily this would have the effect of reducing the price of lumber for the coming sason. but, owing to the fact that large quantities of manufactured lumber have been carried over from last year in Nova Scotia and New Brunswick, combined with the small output for the present year, it is not unlikely that this year's prices will be largely based on last year's cost of production.

While the American market has not yet shown very much improvement, signs are not wanting that indicate American buyers are preparing for an early renewal of business. Enquiries are more numerous, and although little new business is being transacted, it goes to show that American firms propose to keep in touch with prices here, which is in marked contrast to their attitude a month ago. If the larger cities of the New England States, where the housing problem has reached such an acute stage, can arrive at some scheme for providing the housing accommodations which are so badly needed, they are bound to require large quantities of Nova Scotia and New Brunswick stock. In view of this, manufacturers are holding their stocks, the general impression being that prices will improve as the season advances.

The local market is quiet with stocks in yards light. Some of the retailers report business fair, while others say there is practically nothing doing. This condition will apply to the Province as a whole. Labor troubles in Cape Breton, the closing down of part of the Steel Company's plant at Sydney, and some of the mines of part of the Dominion Coal Company at Glace Bay, have had a depressing effect in the eastern part of the Province. The City Council of Halifax has recently borrowed a further $250,000 from the Federal Housing Committee. This is expected to provide for seventy-five more houses, to be erected as soon as the necessary arrangements can be completed.

With the exception of a few small liner parcels, no shipments are being made to the English market at the present time. This will have a stimulating effect on the market on the other side insofar as it is affected by Lower Port stocks, as it will enable imports to assimilate their stocks on hand. If this policy is pursued by all the shippers here, a fair demand should be produced by the time the new cuts are ready for shipment.

That the steamship companies are feeling the slackening of business is evidenced by a substantial reduction in the rate for liners. A short time ago the rate was reduced to 150s. This was followed on January 15th. by a further reduction to 135s., but it is not thought that this will have the effect of increasing the shipments to any great extent, as shippers anticipate a further reduction shortly.

Quebec Business is Dull But Outlook is Fair

The outlook for the export of timber and sawn lumber to the United Kingdom is to say, the least, not very encouraging at the present. Nevertheless Quebec exporting firms are not pessimistic. In the meantime the trade has not been so quiet in many years, and it would appear from the curtailment of operations in the woods, and at the mills all over the district of Quebec, that the exporters and manufacturers feel justified in carrying on with studied prudence and caution, especially as advices from the British market do not warrant

them to take chances. As far as can be learned, the cut of logs has been forty per cent. less than last year. It has been an ideal winter for work in the woods, with mild weather prevailing, and abundance of snow for hauling. This, however, was not taken into consideration to change the conservative minds of the producers or the banks which had tightened their purse-strings.

The latest advices received by the Quebec branch of the trade, illustrative of the position and conditions of the market in the United Kingdom, say that the wood material is greatly needed in Europe for construction purposes but the purchasing powers seem to be holding back in the hope that labor will come back to its senses, and a drop in the price of building essentials occur. The writers of these letters from the market centres of the United Kingdom say the present prevailing conditions are not on account of the political horizon of Europe but due to a general feeling that prices will shortly come down to nearly a level with pre-war conditions. They, at the same time, express the opinion from their knowledge of the situation that a break is bound to materialize in the near future and when it does come, there will be a rush for construction that will change the present gloomy aspect and engender a new confidence in business generally.

As far as the local market is concerned, it is on a par seemingly with the whole world. Quebec City is short approximately 1,500 houses to accommodate its population, and in consequence of the abnormal demand for dwellings, the landlords have raised the rentals to almost impossible prices and the growing population is on the verge of despair. It was thought that when the price of cement dropped to $1 per bag, and other essential building material, including lumber, had cheapened, that investors would start to build. So far there are little signs of this happening, but there are signs that with the arrival of spring, this will change. The mayor of Quebec is determined to do his utmost to end the present housing trouble, and is seeking to organize a company to build enough houses to alleviate the situation, and it is possible that such an example will be imitated by others.

In the meantime, building contractors express the view that springtime will bring forth such an impetus for construction in Canada that will cause such a demand for material as to send the prices up again. In the meantime the Canadian Pacific Railway is proceeding with the building of the new addition to the Chateau Frontenac in this city, which will entail an outlay of $1,500,000, and when finished will cause the Chateau Frontenac to be one of the largest and finest hotels on the continent.

Price Bros., Limited, have practically decided to proceed with the construction of their new pulp and paper mill with its city of houses, etc., next spring that is to cost several million dollars, and it is given out that several other large industries, including a steel screw factory, are being planned for execution in the same location that are being attracted by the immense water powers of the Saguenay River when the extensive damming of same is completed.

Another important industry is planned for execution at St. Michael's Cove, three miles from the city of Quebec, in line with the River St. Lawrence. This industry will be an addition to the pulp and paper interests of the province, and the promoters, who originally intended to locate at Three Rivers, have changed their mind by deciding to come to Quebec where they have obtained an ideal site that not only gives them railway accommodation for shipment but the River St. Lawrence. Negotiations have been going on for the past two months in connection with the establishment of this industry, which are now said to have come to a satisfactory termination. This mill will obtain its electric power from the Shawinigan Power Co., who have only to run a branch line of communication from the main line, a distance of six miles.

The Quebec Harbor Commissioner has just finished compiling the statistical report of the shipment of lumber and timber and other wood from the port of Quebec to the United Kingdom during the season of navigation of 1920, which shows a material decrease in comparison with the shipments of the previous year. In the season of 1920, 36,795,000 feet b.m. lumber, 13,170,490 feet b.m. timber, 468,746 b.m. shortwood, and 364,994 bundles of shortwood.

During the season of navigation of 1919 there were shipped from the port 61,852,743 feet b.m. lumber, 15,253,169 feet b.m. timber, and 3,965,753 feet b.m. shortwood, showing that nearly double the quantity of lumber and over 2,000,000 feet of timber was shipped in the season of 1919 in comparison with last season, and the same applies to shortwood.

St.John Trade Take Optimistic View of Conditions

No one at this port and in this section seems to be worrying as to the future of the lumber business. As a matter of fact, it is always a dull time during the winter season; of course this year high freight rates have kept back any shipments of lumber to the British market. During the last two weeks many sailing vessels have offered themselves at 125 shillings and some have been closed for at this rate. This has had the tendency to awaken the steamer owners to prevailing conditions and freights to Liverpool, London and Manchester have dropped to 135 shillings, and some space is being taken. McKean & Co. are now loading a vessel at St. John for Great Britain. This is the first real loading which has been done for some time. Prices for English deals are still too low to encourage sales for 1921 delivery and no one is making any effort to promote any business, preferring to await developments. The British buyers also seem to prefer to await the outcome of the spring's developments. Logging conditions are fairly good, and labor is plentiful; although a good class of labor cannot be had, as it seems the quality of woodsmen is not as good as heretofore. Costs for logging are not any less than a year ago, as men are costing just as much in yarding time as a year ago, wages only getting less. When yarding had been completed, supplies also had to be put in a year ago and in early fall of 1920, and were certainly at their very highest peak. If supplies could have been purchased to-day they could be bought for much less than last year or last fall. This would have had a tendency to have slightly reduced logging costs, but even then it would not have amounted to much per M feet. Stumpage is to-day higher in Canada and United States than ever before, the landowners in United States are getting 100 per cent. increase in stumpage over 1915 rates, forcing the operators to pay on all the rotten logs as well as the sound, and surveying the logs for really more than the contents. This state of affairs also applies in New Brunswick, where the Government has done the same thing, and conditions of survey as just as bad. How under conditions of these kind are we to have reasonable priced lumber? We certainly will never again see what is called cheap lumber. Prices instead of tending downwards are certainly going upwards again before long, whenever any demand becomes apparent.

Conditions across the border in the United States seem far worse than in New Brunswick and on top of all that, it is hinted that when the Republican party are sworn into power they will immediately put on a tariff of $5.00 per M on Canadian lumber going into United States. If this is so, Canada will benefit and not be hurt as much as our friends to the south, who never kept our home fires burning, but our friends in Great Britain have certainly stood by us at all times, and English trade has been the most substantial and profitable for many years. While occasionally the American business has been offered it was only spasmodic and any contracts made with Canadians were worthless when the prices went down, as the Americans very seldom, if ever, take delivery of the goods, inventing one excuse after another; but if the price goes up they hold the Canadians to the contract. This certainly makes the Canadian manufacturer not over anxious to do business with his U. S. neighbors, so in case the American Government imposes a duty, certainly Canadian lumber will find plenty of outlets and the buyer in U. S. will pay the duty if he wants the lumber. Canada has the forests and she certainly will protect them, and if necessary an export duty can be placed against pulpwood, and it is either do without in United States or come to Canada and establish mills—and duty or no duty, it is not far distant when this will be the case.

Prices locally remain unchanged. Business is fair, helped out by good weather conditions. Certainly by spring business will show considerable improvement.

Ottawa Prices are Firm With Little Trading Done

The Ottawa lumber market for the first month of the year showed a considerable decline in business as compared with a corresponding period in other years, and the amount of trading done was not anywhere near as great. Hopes, however, were entertained by the trade during the latter part of the month, that business would begin to pick up around the middle of April, but the month of February is expected to be a dull one.

Taken all around there were some hopeful signs, and one of them was that prices maintained themselves, with practically no trading being done. The upkeep of prices it was affirmed was largely due to there being little or no buying, and as the stocks were not changing hands or moving, it was impossible, dealers said, to say what prices stocks would bring in the market, in the event of being sold.

The white pine market showed no sign of falling off even with the lessened amount of trading. Most of the red pine of the Ottawa Valley is sold in blocks for manufacture and export to England, so there was little by which to gauge prices in this direction. Reports in some circles indicated that the price of spruce was falling away, but as few if any sales of this grade had been made, the correspondent of the "Canada Lumberman," was unable to secure definite information as to the drop in price, if any has actually occurred.

Another of the cheery signs was that a few more inquiries, filtered through, than during the first two weeks of the year. Very few of these inquiries resulted in orders being placed, but even the receipt

EDGINGS

P. N. Mathieu is erecting a new sawmill in the village of Montmorency, Que.

W. F. Cooke was recently registered in Montreal as a wholesale lumber dealer.

Perron & Lennieux, who operated a sawmill at St. Hermenegilde, P.Q., have recently dissolved partnership.

The Swan Valley Lumber Co., Yorkton, Sask., has been incorporated with provincial charter. Capital, $100,000.

Arthur Kent, lumber dealer, of Granby, P.Q., recently passed away. He was widely known in the east and highly respected.

The city of Montreal will petition the Quebec Legislature, when it opens next week, for a loan of $20,000,000 to assist in house-building.

Hydraulic Machinery, Limited, Montreal, were recently granted a provincial charter to manufacture all kinds of pulpwood machinery with a capital of $500,000.

Pembroke Lumber Company, Limited, Montreal, with a capital of $2,000,000, has been incorporated under federal charter to conduct a general lumber, timber and pulpwood business.

The La Cloche Island Company, Limited, Little Current, Ont., were recently incorporated under provincial charter to buy, manufacture and deal in timber. Capital, $1,000,000. Two of the incorporators are W. L. Kinney and H. G. Verrill, both of Marion, Michigan.

M. A. Bradshaw's box factory at 1483 Chateaubriand Ave., Montreal, was recently damaged by fire. The factory, which is operated by W. J. Lapham of Point Clair under the Bradshaw name, is a total loss. The damage done was about $10,000, with only partial insurance.

The Nutbrown Lumber Co., Limited, Sherbrooke, P.Q., with a capital of $20,000, have been granted a provincial charter to buy and sell timber berths and to conduct saw and planing mills. W. Lazure and J. S. Couture, both of Sherbrooke, are two of the incorporators.

A. E. Fish & Sons, Limited, Ayers Cliff, Que., were recently granted a provincial charter to conduct a business as dealers in pulpwood, lumber and other building materials. Capital, $99,000. A. E. Fish and F. J. Wilkinson, both of Ayers Cliff, Que., are two of the incorporators.

The J. Robert Landry Co., Limited, Montreal, were recently granted incorporation under provincial charter to manufacture and deal in logs, lumber, pulpwood and other forest products. Capital, $20,000. J. R. Landry and J. P. Landry, both of Mont Joli, Que., are two of the incorporators.

Major L. R. Andrews, who has been in charge of management in the forestry department at Victoria, B.C., is being promoted to the office of district forester at Vancouver. He is to succeed Assistant Chief Forester Christie, who is joining the staff of the University of British Columbia.

A partnership known as E. A. Flewwelling & Son, Hampton, N.B., was recently formed to conduct a general lumber business, sawing and manufacturing all kinds of forest products. E. A. Flewwelling and G. H. Flewwelling, lumbermen, both of Kingston, N.B., are two of the incorporators.

The contracts in connection with a new pulp mill to be established at Sorel have been signed, between the city of Sorel, the Q. M. & S. Railway and J. H. Dansereau. Some $500,000 will be spent as an initial outlay as per agreement. The capacity of the pulp mill will be 40 tons a day.

McNaught Lumber Company, Limited, Chapleau, Ont., was recently granted a federal charter to conduct business as timber merchants and manufacturers of forest products. Capital, $400,000. Two of the incorporators are A. Morse, lumberman, of Pine P. O., Ont., and Chas. Ryan, Chapleau, Ont.

Wages in the lumber camps are up again in the Sudbury district. The camps are now paying as high as $70 and $75 for experienced men, but are hand-picking them. The average wage, however, is $55 to $75, with some camps paying as low as $40. This is the first year in several that lumber camps have been able to get anything like efficient help, and also to hold it.

During the past year 75 shade trees were planted along the streets of Agincourt, Ont., and in the last three years more than 300 trees have been set out. At a recent meeting of the Horticultural Society, the reforestation plans of the society for the coming year were discussed and it was predicted that soon every street in Agincourt would have shade trees along both sides.

Rt. Hon. N. W. Rowell, K.C., has been appointed Crown counsel in the action taken by the Ontario Government against the Russell Lumber Co., and the Shevlin-Clarke Co., Ltd. The suits are the outcome of disclosures made before the Riddell-Latchford timber probe. The two companies, it is alleged, failed to make proper returns to the province in the matter of timber dues.

Canadian International Paper Company has been incorporated under the laws of Quebec, with a capital stock of $20,000,000. The new company is a subsidiary of International Paper Company, operating the new mill at Three Rivers, Que. The mill when completed in the fall of 1921, will have a capacity of 240 tons of newsprint daily. It is now turning out 60 tons of sulphite pulp daily.

A mill at Upper Cross Creek, on the C.N.R., 31 miles from Fredericton, N.B., and owner by Gordon G. Scott, of Fredericton, has been entirely destroyed by fire, the loss being $25,000 and the insurance only $6,000. It was formerly a log lumber mill, but had been refitted with rossing machinery for pulpwood as well as shingle and box machinery and was to have started operations.

H. Lovell & Sons, Limited, Coaticook, Que., have been granted a provincial charter to conduct a general lumber business and to manufacture chairs and other articles of furniture. The company will take over the real estate business of H. Lovell & Sons. Capital, $250,000. Fritz E. Lovell, lumber manufacturer, and A. J. Sparks, lumberman, both of Coaticook, are two of the incorporators.

Major Gordon, of the Canada Air Board, Ottawa, has been in Fredericton, N.B., conferring with the officials of the Department of Lands and Mines. It is proposed to inaugurate an aerial patrol of New Brunswick for next season

during the peak of the danger period from forest fires. He is understood to have been submitting statements of probable cost for submission to the forest advisory board and the Government.

Manley Chew, who was granted a fixed assessment of $125,000 by a by-law voted upon by the ratepayers of Midland at the recent municipal contest on condition that he erect a fibre board plant, the first unit of which will cost $250,000, states that nothing will be done in the way of construction until the spring. Mr. Chew has not definitely decided as yet to erect a plant, but if he goes ahead with the proposition, Midland will, in all probability, be the point selected.

The Canadian Forestry Association, which is now in receipt of an annual grant of $500 from the Quebec Government, is asking that the amount be increased to $5,000 with a view to the maintenance of a permanent representative of the association at Quebec, the provincial capital, one who would give his whole time to the work of the association in the field work, lecturing, and educating public opinion.

According to an announcement made recently in Victoria, B.C., by the Provincial Registrar of Companies, British Columbia is to have another big pulp and paper enterprise. This is the Prince Rupert Pulp & Paper Company, Limited, which has just been incorporated with a capitalization of $4,000,000, to manufacture paper on a large scale in Northern British Columbia. The head office of the company is in Vancouver.

According to the report of the Department of Municipalities, which has been presented to the Quebec Legislature by Hon. Walter Mitchell, Provincial Treasurer, 34 cities and towns have benefited from the federal grant of $7,000,000 for the construction of dwellings. Among the municipalities which have taken advantage of the loan are: Chicoutimi, Drummondville, Sherbrooke, Grande Mere, Montreal East, St. Lambert and St. Laurent.

A deputation, representing the Canadian Forestry Association, waited upon Hon. E. C. Drury, Premier of Ontario, recently with the request that the annual allowance from the Government be increased from $3,000.00 to $4,000.00. The premier said while all grants to propaganda organizations had been cut out, he would see if something could not be done to give increased aid to the Canadian Forestry Association as fire protection and reforestation are exceptional and matters of vital concern to the whole province.

The tax rate in Hull, Que., will be reduced this year, due to the increased revenue that will be derived from the lifting of exemptions from taxation on the buildings of the E. B. Eddy Company, Limited. The additional revenue from 208 buildings owned by the E. B. Eddy Company, Limited, will not only bring in a larger amount of money to the city coffers, but the added assessment will increase the corporation's borrowing by at least $2,000,000. The assessment of the company's property will be in the neighborhood of ten or twelve millions.

After looking over the pulp situation in British Columbia during the past two weeks, Messrs. K. Nakamura and H. Kabashi of the Toya Shokwai Company, Tokio, left lately for the eastern United States. The Toyo Shokwai is one of the largest import firms in Japan dealing in pulp supplies and paper-making materials in general. For some time past they have purchased considerable quantities of pulp from the Whalen pulp corporation and during their stay on the coast have visited the Swanson Bay plant of this company.

Seven hundred more buildings were constructed or enlarged, in Winnipeg, last year than during 1919, according to official records. The cost of 2,500 structures was $8,367,250; the largest amount in any year since 1914, the year the war started. The outlay was about three times as large as that of 1919, when $2,948,000 was spent. The 1919 number of buildings was 1,789. Buildings costing $91,000 were constructed this month as compared with outlays of $149,450 in December a year ago.

Hon. Beniah Bowman, Minister of Lands and Forests, in an address at the Lumbermen's luncheon in Ottawa, stated that two experiments in disposing of brush by burning had been tried and found to be very successful, and the report reaching the department was very satisfactory. It cost about 5c a tie to destroy the debris, which always constituted a fire hazard, and about $4.00 per M to burn the brush. The co-operation of the lumbermen in all these experimental undertakings is desired.

Wages in the lumber woods of New Brunswick have taken a big drop this year. The prevailing rate of pay at this time is sixty dollars per month with board, whereas last year it was seventy-five or eighty dollars per month. In one camp a crew that had been receiving sixty dollars a month recently made a demand for ninety dollars. When the increases were refused fifty quit the job at once, but their places were filled in short order by other men who accepted the sixty dollar rate. So far the pulp mills have been busy cutting their materials in the woods, but there are rumors afloat that these will shortly reduce their staffs.

Reductions in wages at the Canadian Western Lumber Company's mill at Fraser Mills are announced in order to keep the plant operating against an adverse market, says a recent despatch from New Westminster. The Timberland Lumber Company at South Westminster, which closed recently for repairs, has reopened and will, if at all possible, be kept in operation, despite the present market conditions. The Bucklin Lumber Company are closed for overhaul and repair and are not likely to resume work for some time yet. Although the Bucklin Lumber Company are still closed it is expected that a resumption of operations will be made about Feb. 1.

Passing of Another Pioneer Lumberman

Matthew Taylor, a pioneer sawmill man, died recently in Toronto, at the sunset age of 93. Until a few months before his death he was very active and able to take long walks. Mr. Taylor was born in Sligo, Ireland, and came to Weston, Ont., 90 years ago. With his brothers he kept a water-power sawmill on the banks of the Humber, and used to saw lumber which was later brought to Toronto along "the awful sandy roads." On one occasion Taylor found he had lost a large sum of money. He stopped his team and walked along the road to find it. He had no success, but coming back he discovered it safe and sound amongst the logs. Queen Victoria's accession to the throne was a great subject with the old man, and he frequently mentioned the great rejoicings which took place round the countryside. Mr. Taylor leaves two sons, W. H. and A. C. Taylor of Toronto.

"By-Pass" Blower Systems

for green saw dust and wet stringy material

Material that usually clogs the ordinary Blower is handled easily and continuously by our "By-Pass" Blowers. No material passes through or around the fan. That is the big secret of "By-Pass" success. Slow speed and minimum power are other strong features. Write for literature and all details.

We manufacture and install complete systems

Toronto Blower Company

156 Duke St., Toronto

Ottawa Prices Are Firm With Little Trading Done

(Continued from page 74)

of inquiries were welcomed whether they led to orders or not, and were taken as a criterion that the interest of buyers was beginning to mainfest itself again.

With business practically at a standstill, there were those outside of the trade, who for some unknown reasons got the idea that the lumbermen were downhearted, and if they got a chance to sell would cut each other's throats to make a sale, regardless of price. These people are kidding themselves very badly.

A canvass of the Ottawa market, expels any such idea, and instead of depression and panic premeating the ranks of the lumber fraternity, there is the reverse. Optimism prevails, and is likely to prevail for some considerable time, or until such a period is reached that will clearly show that it is justified—which will likely be in the latter part of April and the month of March.

To be concise, if the price of lumber on the Ottawa market is going to materially drop, the decrease is not going to take place much before the first of June, or perhaps a few weeks later when the new sawmill cut begins to come into the market. Such a statement seems a far fetched prophecy, but the conditions at Ottawa and throughout the Ottawa Valley at present justify it.

It has already come to the knowledge of the trade in general, that some small operators, or jobbers, have been underselling, because they were more or less financially tied up and needed money. None of the larger companies did it or attempted to do it.

In other words it is only a question of making profits, but from an economic standpoint it is not sound. The logs that made the lumber that is owned by Ottawa and Ottawa Valley Companies today, some of them cut two or three years ago, cost more than similar logs ever did. They were cut, driven and sawn, at "peak prices," and food supplies in the camps are at the same level. Labor costs reached a peak that they never previously, or will likely again attain. Production on account of increased operating expense has been curtailed, and this year the Valley will not likely witness even a sixty per cent. normal cut.

The argument of the general public, which knows little or nothing about the costs of operations from the time the fall camps are established until the wood reached the mill, is sawn, and then comes into the market, and into its hands, is that the lumbermen are loaded up with high cost stock and as the price of other commodities is falling that lumber is bound to take a tumble, and prices will be lower in the spring. Besides, there is no demand. "Nobody will build because of the high cost of lumber" is a frequent complaint, and those who want to argue the matter say the stocks will have to lie in the dealer's hands and rot unless he brings down the figure.

Conditions with the woodworking factories, remained about the same as during the first part of the month so far as new orders were concerned. The plant of the McAuliffe Davis Lumber Company reopened, but was operated on about half a staff, and was worked on old orders. The large plant of James Davidson & Sons remained closed, and it was not considered likely that it will re-open until some time in February.

The labor situation showed little change, there being plenty of it for the woodworking factories, and reports from the woods indicated that there was no shortage of it there. The general opinion in the trade was that the cost of labor would further drop. If it does in the building trades, it will mean much new structural work being undertaken.

Bush operations so far have not been all that could be desired owing to the mildness of the weather. The weather so far has been ideal for log making, but had been very poor for hauling. It was stated by operators that while a third of the seasons log cut should have been hauled by the middle of January, that only about 10% of it had been moved.

Montreal Declares That the Tide is Slowly Turning

Business in Montreal is picking up. The volume of orders is not large but, with the more numerous inquiries, is sufficient to indicate that the tide is turning. Besides this, there is a much more optimistic feeling among wholesalers. Men who a short time ago were inclined to look on the black side of the picture are now expressing a belief that we shall shortly see a substantial revival in trade.

Prices are still an uncertain quantity. Many wholesalers are of opinion that the bottom has been reached, and that in the spring there will be an appreciable recovery. The outlook may be said to be satisfactory, on the whole. "Now is the time to buy," said a partner in a large wholesale firm. "In my opinion, prices are at the lowest point, and I believe that anyone who purchases now will be able to secure lumber at values which will show a considerable appreciation in a very short time."

The annual meetings of the various forestry asociations and the Pulp & Paper Associations were largely attended. Besides men who are primarily interested in the pulp and associated industries, there were present many lumbermen from Eastern Canada. Lumbermen are showing greater interest in forestry questions, such as fire protection—the most important subject to the lumber interest today, according to Mr. J. F. Gregory, of Murray & Gregory, St. John, N.B. It is obvious that lumbermen are dependent for their business existence on a free supply of raw material, and the depletion of that supply by fire involves the loss of potential trade. Lumbermen spoken to at the meetings were quite optimistic as to the future, expressing the view that the worst of the depression is over.

In another column reference is made to the building situation in Montreal in relation to workmen's dwellings. The position is far from satisfactory, and although action is being taken by local organizations, there does not seem much hope of anything effective being done. As to the Province, the Hon. W. Mitchell, Provincial Treasurer states that the number of municipalities to whom an advance has been allotted for workmen's dwellings is 34. The total amount of the grant to these municipalities amounts to the sum of $6,430,000. Several applications are under consideration for the balance of the money.

Newsy Happenings From the East

If present arrangements materialize George McKean & Co. Ltd., of St. John, N.B., will ship overseas in the near future 2,000 standards of lumber, or approximately 4,000,000 feet. The large freighter, Lord Strathcona has been secured to convey the lumber overseas, and will receive orders re. her destination upon arrival at a port in Ireland. This will be the largest consignment of lumber shipped from this port for some time.

The B. A. Mowatt Co., Ltd., with head office at Campbellton, N.B., and capital stock of forty-nine thousand nine hundred dollars, has been incorporated to take over the business rights and property of the firm of B. A. Mowatt and carry on general business and lumbering in all its branches in this province.

Wages in the lumber woods of New Brunswick have taken quite a slump this season. At the present time the prevailing rate of pay is sixty dollars per month with board, whereas last season it was eighty dollars a month.

What is considered a very important step for the betterment of conditions in the woods has been taken by the St. John Ambulance Association. At a recent meeting of the provincial executive committee it was decided to co-operate with the Workmen's Compensation Board and to send to lumber camps and industrial plants of the province an inspector skilled in the art of first aid. Jack Redfern, a well known physical instructor, who is well advanced in first aid, has been appointed to inspect the plants and camps and also give these valuable instructions. Mr. Redfern has already taken up this important duty.

The Bathurst Lumber Company recently shut down their pulp plant, owing, it is said, to an unprecedented lack of demand for their output. It is claimed that the market is swamped with pulp wood and pulp products, but movements are slow owing to manufacturers holding out for top prices. There is hardly a railway siding in this province that is not loaded up with pulp wood, and from present indications it will lie there for some months.

Tenders have been called for 400,000 feet of spruce for development work at Musquash where the Provincial Government proposes to harness the falls for hydro power.

A sawmill, owned by Gordon G. Scott, of Fredericton and situated at Upper Cross Creek, York County, was destroyed by fire recently. The loss is estimated at $20,000, and the insurance only amounted to $6,000. The origin of the fire is a mystery. The fire was discovered about 10 o'clock at night in the main building and despite all efforts, spread until the entire structure was soon a mass of flames. Mr. Scott is as yet undecided whether or not to rebuild. The mill had been started that day to test the new rossing machines, which were to be used to ross 2,000 cords of pulpwood. The only cause which can be assigned to the starting of the fire is the dropping of a match or cigarette in sawdust. The mill was built two years ago and contained a 150 horse power engine, a rotary machine, two shingle machines and other equipment.

Major J. L. Gordon, of Ottawa, was at Fredericton last week as a representative of the Canada Air Board conferring with Col. T. M. Loggie, deputy minister of lands and mines, concerning the proposed fire patrol of New Brunswick forests by seaplane. Colonel Gordon also had a conference with Hon. C. W. Robinson, minister of lands and mines; in Moncton, N. B. on the same matter. The advisory board of the department have not as yet definitely decided to have seaplane patrol, but it is conceded by men of experience in the forests that it should be a good way to detect fires and in many cases extinguish them before they got beyond control.

AMBEST

"AMBEST" Metallic Packing does away entirely with carrying a varied assortment of packings in stock. They are all in the same can, and any sized rod or valve stem can be packed.

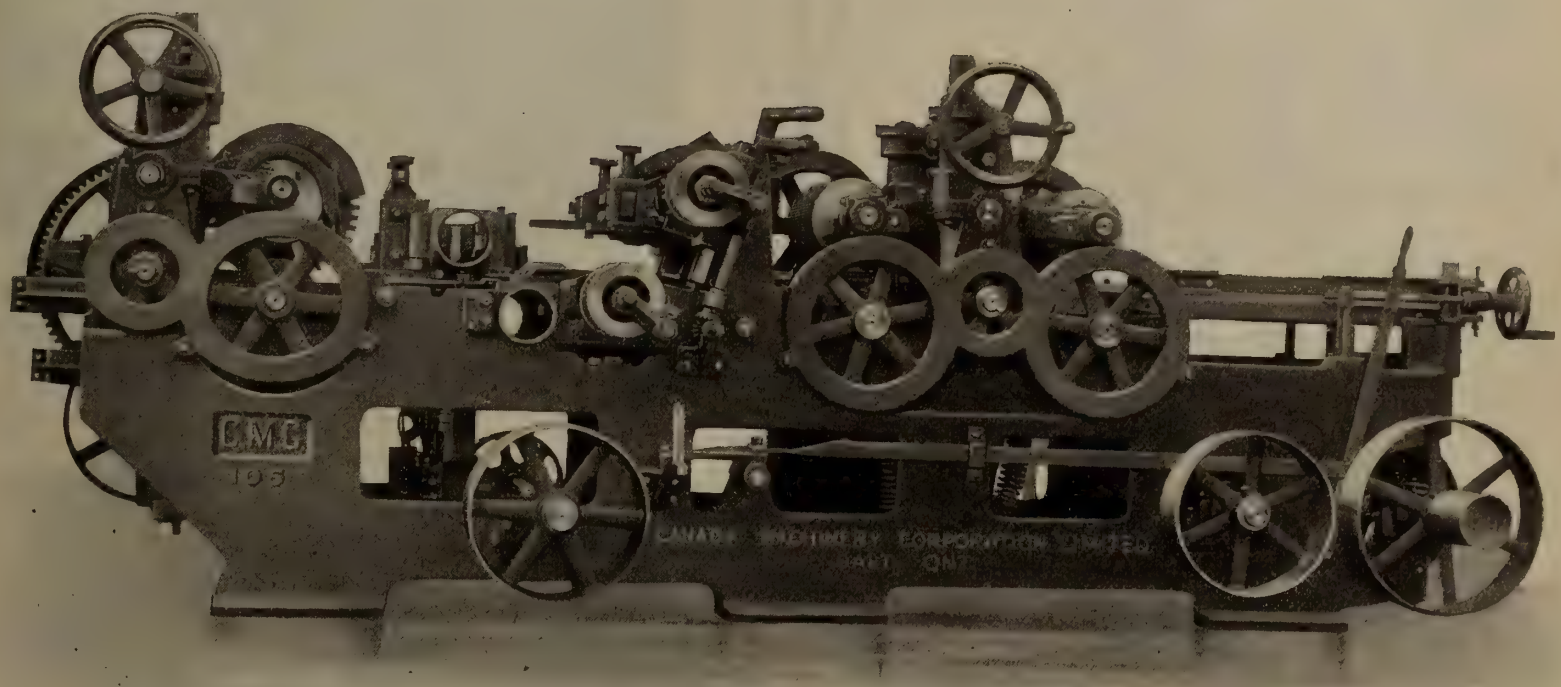
C.M.C.

No. 105 Double Cylinder Planer and Matcher



CAPABLE POWERFUL CONVENIENT

A heavy, moderate speed, moderately priced machine, having a large capacity for work and a staying power that makes it invaluable to the average planing mill.

This machine will plane 15″ x 6″ and match 15″. It will handle stock at the rate of 100′ per minute which is somewhat faster than the ordinary man will be able to feed by hand for any length of time. Rates of feed supplied are 45′, 60′, 75′, 90′ and 100′ per minute.

Six 9½″ feed rolls furnish the feed for the machine. Each roll carries a 17″ gear, thus permitting the use of a coarser pitch, and greatly lengthening the life of the gear, as well as producing a very powerful feed. The top rolls are hinged in heavy housings and spring pressure applied to each end of the roll. The rolls lift parallel and cannot bind.

Full particulars and prices will be cheerfully furnished on request.

CANADA MACHINERY CORPORATION
LIMITED

GALT - - ONTARIO

CURRENT LUMBER PRICES—Continued

For 2 inches, rough, add 50 cents.
For S1E only add 50 cents.
For S1S and 2E, S4S or D&M, add $3.00.
For timbers larger than 8 x 8, add 50c. for each additional 2 inches each way.
For lengths longer than 20 ft., add $1.00 for each additional two feet.
For selected common, add $5.00.
For No. 2 Dimension, $3.00 less than No. 1.
For 1 x 2 and 2 x 2, $2 more than 2 x 4 No. 1.
For Tamarac open.

FIRE BRICK
AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

QUICK ACTION

Can be assured if you will let the CANADA LUMBERMAN "Wanted and For Sale" department take care of your miscellaneous business needs.

We receive constant testimony from advertisers as to the value they have received from this far-reaching and inexpensive method of publicity in the lumber trade and allied industries.

Try these columns. The result will surprise you.

CANADA LUMBERMAN
347 Adelaide St. West - - TORONTO

DISSTON

A survey of the largest and fastest running mills will show that Disston Circular Saws and Band Saws predominate.

Saws made by Disston workmen and Disston Methods stand up to the work and run true to speed.

Each swaging and filing during the entire life of the saw finds the same quality of steel that the saw possesses when new. No matter what your requirements—whether they be for log sawing, factory work, or metal cutting—you'll find a Disston that is exactly right for your particular needs.

DRYING

VENEER drying by the "Proctor" Automatic Veneer Dryer gives superior quality, efficiency and economy.

A fundamentally correct method of drying is combined with an ingenious system of carrying the veneer, holding it flat, while the moisture is thoroughly and uniformly evaporated. Being held flat, the veneer cannot warp. Natural shrinkage, however, is allowed; thus, checking and splitting are prevented.

Output enormous; saves time and labor; cuts costs; many installations; capacity and results guaranteed.

LOG LOADERS AND SKIDDERS

Choice of either Gasoline or Steam Power.

Take the place of high-priced labor, do more work, better work, and at less cost than man power.

They will either load or skid your logs much more quickly than men or horses could do it, and at less cost.

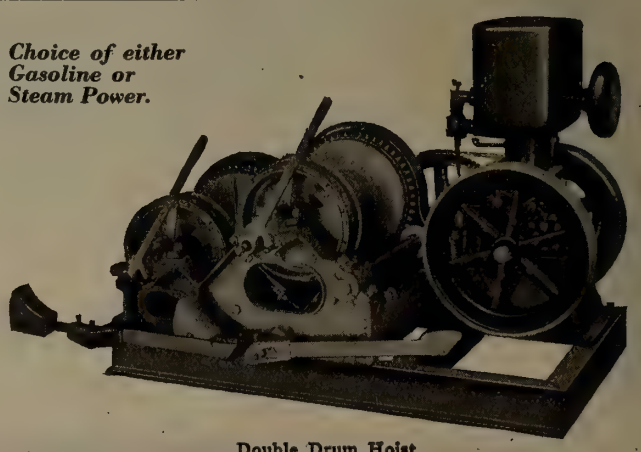
They are always on the job, ready to do their maxmium work at a minute's notice, and will do as good work at 20° below zero as on a hot summer day.

They will handle with ease, either loading or skidding, one large log or two or more small logs bunched together.

They are small, light, compact and easy to move around, and also easy to keep in good working order.

They are made in two styles—gear driven, as shown, with motor mounted on same bed as hoist, and belt drive, with motor on separate base.

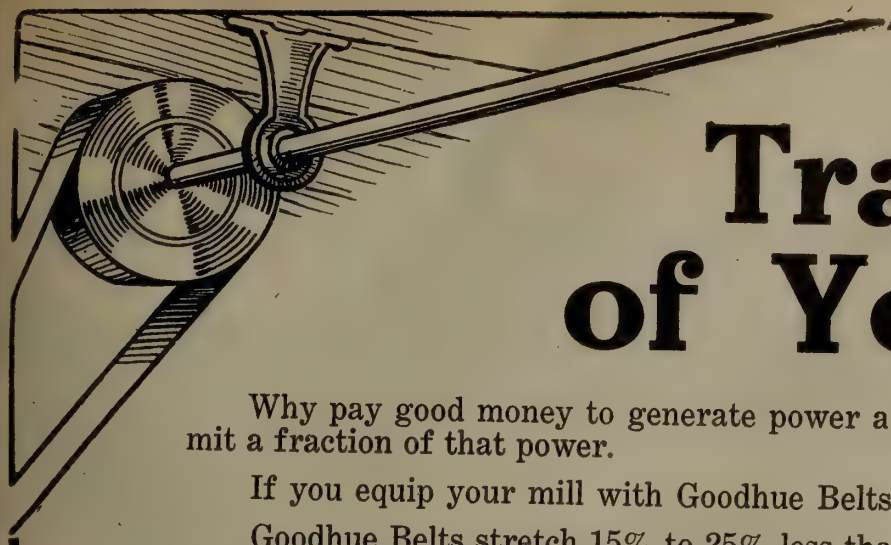
Write for further particulars.



Double Drum Hoist

Marsh Engineering Works, Limited ***Established 1846*** **Belleville, Ontario**

Sales Agents: MUSSENS LIMITED, Montreal, Toronto, Winnipeg, Vancouver.



Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit a fraction of that power.

If you equip your mill with Goodhue Belts you can transmit 100% of the power generated.

Goodhue Belts stretch 15% to 25% less than other belts and have just the right amount of "cling" on the pulley.

Write us for particulars and prices

Fires Start Easily in Lumber Camps

Next to a fight, the easiest thing to start in a lumber camp is a fire. Overturned oil lamps or lanterns are prolific sources of fires and a fire in your camp may mean the loss of an entire season's cut. Let fire get a start and camp, provisions and equipment are sure to go.

The surest way to eliminate the fire danger in every oil lamp or lantern is with Dominion Light. Its incandescent bulbs are absolutely safe. Then there is the convenience of having all the light you want where you want it.

Fine materials, expert workmanship and rigid inspection insure Dominion users the utmost reliability, ample reserve power, with economy of fuel and low maintenance. Dominion Light Plants are quality products built to a high standard and not to a competitive price.

Write us for full description and name of nearest dealer.

SPECIFICATIONS

Rating one K.W. (1000 watts) with a continuous overload capacity of 20% or more. Battery of 160 Ampere hours. Air-cooled engine with 3 S.K.F. ball bearings operates on Kerosene. Loads sixty 20-watt lights with engine running or thirty 20-watt lights from battery alone for eight hours.

26 Models for Sawmills, Planing Mills & Box Factories

Wm. B. Mershon & Company

Saginaw, Michigan

This is an interior of the C. P. R. Angus Shops at Montreal. The Sturtevant System is operating here with great success.

"It's an Ill Wind that Blows Nobody Good"

A planing mill was built in an exposed spot, where it was buffetted by the winds from the North, the East, the West, and the South.

The Fire Demon marking it for his own, sat—and waited.

But he had not reckoned on the "other wind". The wind that was inside the mill—the wind that blew the shavings—the saw dust—The Fire Demon's food—blew it away before he could pounce upon a particle.

This wind came from the

Sturtevant
(TRADE MARK)

Planing-Mill Exhausters

The wonderful system that removes all litter—sawdust—shavings—the instant they are formed, and spirits them away, before they create a fire-risk.

There are a great number of planing mills throughout Canada equipped with the Sturtevant System. Production has increased considerably in these mills, simply because the workers are now operating machines that are free from the clogging litter, and also because the atmosphere is clear of dust, and working conditions are much improved.

What are the conditions in YOUR mill?

What are the chances of a sudden fire breaking out?

Write for our Bulletin No. 261 C containing much information of interest to you.

STUDY AT HOME
and Make More Money

What Is Your Job?

Are you the man who is bossed—are you doing the hard work while some other man gets the high pay for telling you what to do? Why not be the boss yourself? The only difference between you and the men higher up is in what they know what you don't know. They get their big pay and have the easy work because they know how to direct you and other workmen. If you could read blue prints, estimate on work, know how to direct construction, you too would be in the big pay class. Read below how you can get this knowledge and be a bigger man in your line.

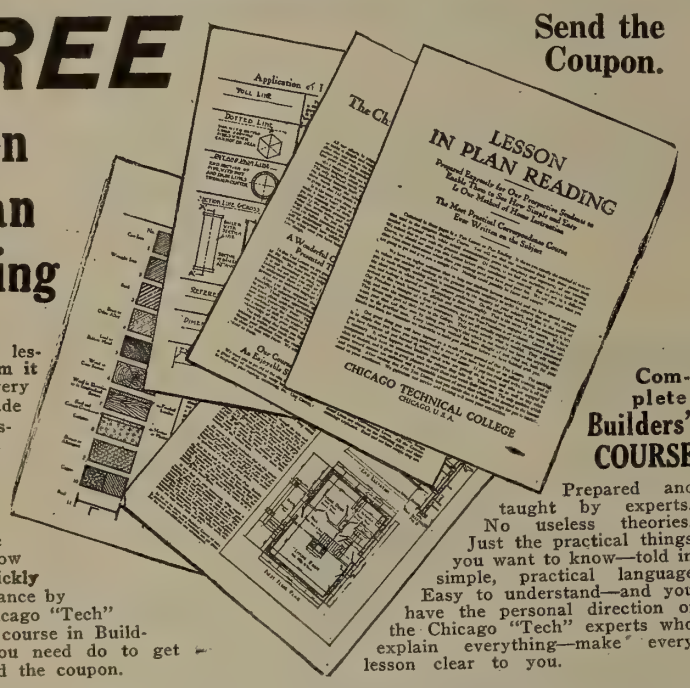
Learn in Your Spare Time

At home—in your spare time—you can get instruction by mail from the experts of Chicago Technical College. You can learn all the higher branches of your trade and soon know as much or even a good deal more than the man who is bossing you now. If you are a workman, you can train for a foreman's or superintendent's job or you can look ahead to being a contractor in business for yourself. This training doesn't cost much and you can pay on easy terms. Look into this now. Just send the coupon below and get catalogs and full information.

FREE

Send the Coupon.

Lesson in Plan Reading



Get this free lesson. See from it how plain every point is made and how easily you can grasp it. Not a cent to pay. This lesson is free—sent to show you how quickly you can advance by taking a Chicago "Tech" home study course in Building. All you need do to get it is to send the coupon.

Complete Builders' COURSE

Prepared and taught by experts. No useless theories. Just the practical things you want to know—told in simple, practical language Easy to understand—and you have the personal direction of the Chicago "Tech" experts who explain everything—make every lesson clear to you.

What We Teach

Plan Reading. How to read a building plan. How to read dimensions. Detail drawing. How to lay out work from plans. Tracings and blue prints—how they are made. Practice in reading complete plans from basement to roof, etc., etc.

Construction Brick Work. Footings and foundation walls of brick, concrete and stone. Brick laying complete. Brick and stone arches. Use of different kinds of stone. **Carpentry.** Kinds and uses of wood, cornices, interior details, etc., etc. Plans and specifications for all kinds of buildings.

Estimating. Practical rules. Problems worked out from the plans. Brickwork and carpentry. Re-inforced concrete. Estimates of labor and material for all classes of construction. Fire proofing, tile flooring, arches, partitions, furring, terra cotta, etc. Lumber and timber; figuring board feet. Estimating mill work. Lathing and plastering, sheet metal work, marble jointing and decorating, glazing, plumbing, heating, wiring, etc.

Arithmetic, Architectural Drafting, Plumbing, Heating and Ventilating all taught by practical men.

Get This Training By Mail

You get all this training by mail and you study in spare time. Not an hour taken from your work. Keep on earning while you are learning—then step into bigger pay as a building expert—get paid for what you know—not for what you do. You be the one to know the "hows" and "whys"—to tell others just what to do.

Send Coupon Now

This brings catalogs and complete information about the course which interests you. See how others have profited merely by study in their spare time—by preparing for the big jobs above them.

Mark X in coupon to show which course interests you.

Efficient service is the keynote of membership of the

Canada Lumberman

founded 1880

—IN—

Canadian National Newspapers and Periodicals Association

—a highly constructive service—absolutely dependable and devoid of prejudice and personal bias. It means much to you!

The policies and principles back of this important service enable you to secure practical and impartial information of great value in business and in the home: and they assure a ready fund of literature of exceptionally high standard at all times.

To read the Association's Standards of Practice listed herewith is to understand what this Association means to you.

Standards of Practice

Canadian National Newspapers and Periodicals Association

THE Members of this Association shall dedicate their best efforts to the cause of business, and public service, and to this end shall pledge themselves:

1. To consider first the interests of the Subscriber.

2. To work for truth and honesty in all departments.

3. To eliminate, in so far as possible, their personal opinions from their news columns, but be leaders in thought in their editorial columns, and make their criticisms constructive.

4. To refuse to publish puffs, free reading notices, or paid write-ups, to keep their reading columns independent of advertising considerations, and to measure all news by the standard "Is it real news?"

5. To decline any advertisement which has a tendency to mislead, or which does not conform to business integrity.

6. To solicit subscriptions and advertising solely upon the merits of the publication.

7. To supply advertisers with full information regarding character and extent of circulation, including detailed circulation statements, subject to proper authentic verifications.

8. To co-operate with all organizations and individuals engaged in creative advertising work.

9. To avoid unfair competition.

10. To determine what is the highest and largest function in the field which they serve, and then to strive in every legitimate way, to promote that function.

This is Number One of a series of advertisements regarding an Association that typifies thorough-going Canadian stability.

Canadian National Newspapers and Periodicals Association

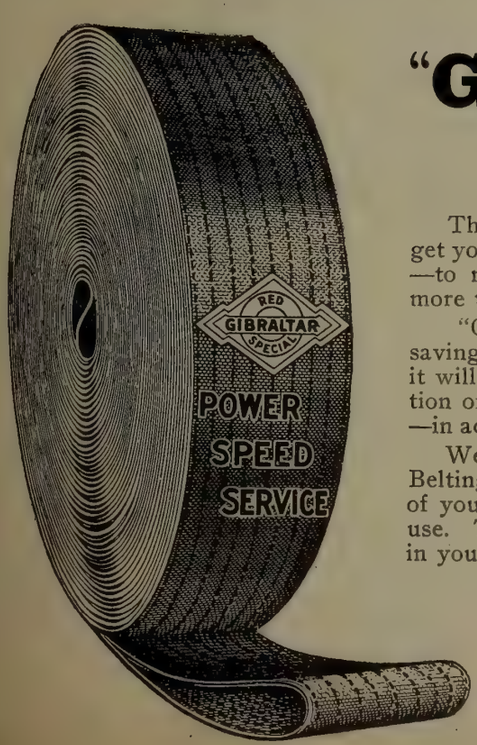
A Positive Aid in Reducing Overhead Costs



"Gibraltar RedSpecial"

(The original Canadian Red Frictioned-Surface Belt.)

There is no better time than right now to get your production costs down to rock-bottom—to make every dollar count for something more than ever.

"Gibraltar RedSpecial" can effect a big saving in a plant in a very short time. In fact, it will more than pay for itself in the elimination of belt trouble, of tie-ups and waste-time—in addition to delivering more power.

We guarantee that "Gibraltar RedSpecial" Belting will require less attention on the part of your staff than any other Belting you can use. That, alone, means a positive reduction in your overhead.

Dunlop "Gibraltar RedSpecial" is distinctly different in every manner, shape or form, from other belts. **You are not giving your plant a square deal if you are not using this belt.** There is nothing more convincing than an actual test. Why not make it the first time an opportunity presents itself? Your interests will be well protected by us.

Take us into your confidence in regard to your belt troubles; advise us of any unusual belt conditions, and we shall be glad to give you the benefit of our long belting experience.

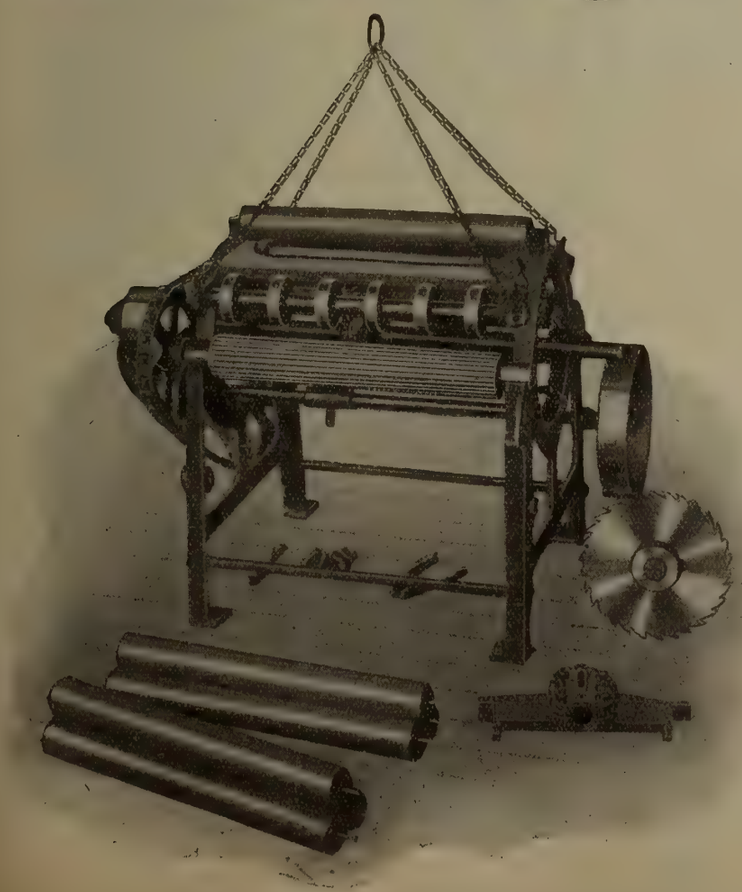
Dominion Express Bldg., Montreal, Canada

The Ideal Edger for Light Mills



Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

OTTAWA MONTREAL TORONTO WINNIPEG VANCOUVER NORTH BA

Large stocks available for immediate shipment

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

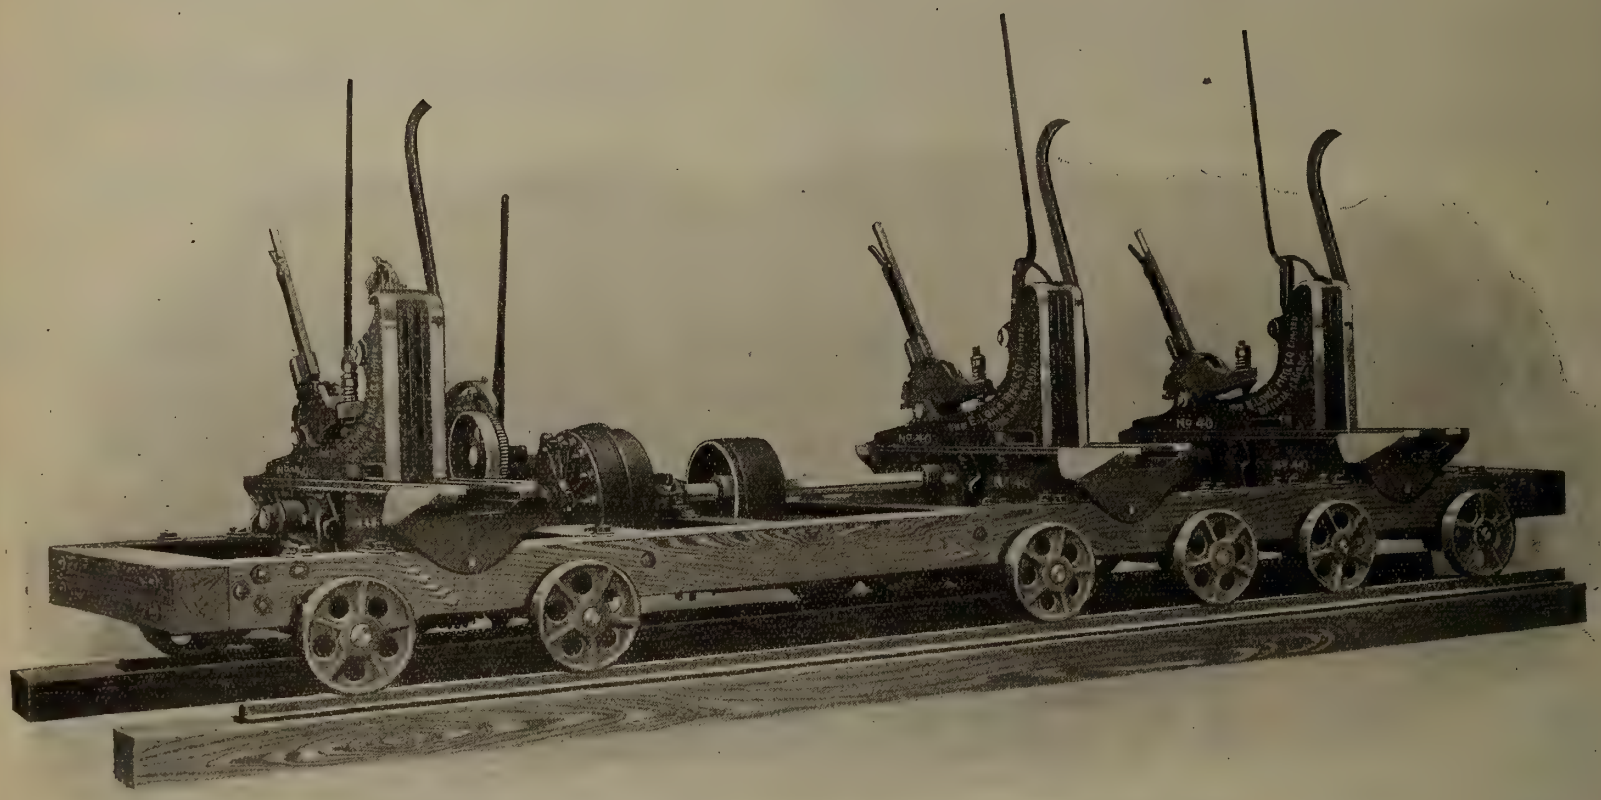
THE E. LONG MANUFACTURING CO. SAW MILL MACHINERY ORILLIA, CANADA

Saw Carriages



The above illustration shows our No. 40, three block outfit. This is one of the most substantial carriages ever designed, and is well known for its efficiency throughout the lumber industry of the Dominion. Carriage may be furnished in any number of head blocks or axles, also with steam set works attached to either our No. 3 or No. 4 set. Knees recede 40 inches from the saw line ordinarily, but we now make this carriage special, 36 inch opening also.

We make all sizes of saw carriages for every type of mill.

Williams & Wilson Ltd., Montreal

Waterous "Trouble-Proof" Haulup Chains

The efficiency of your haulup depends directly on the strength and the wearing qualities of your log chain. Waterous Chains have more than their share of both. They are built of selected materials. The shop work on them is of the very best. They are tested and inspected before shipment.

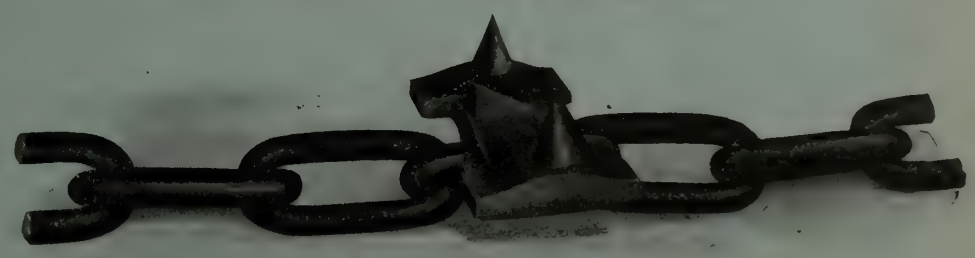
Next time you order—think of "Trouble Proof"—and specify "Waterous."

Waterous Forged Bull Chain

This chain is forged from the best refined wrought iron. It is 6 inch pitch and is built in seven sizes, ranging in weight from 2½ lbs. to 15 lbs. per foot. Iron, steel and wood specials of various forms are supplied with this chain. It can be used on all size Bull Wheels and is also adapted for Rough Wood and Refuse Conveyors.

Short Link and Long Link Coil Chain

For strength and general usefulness this chain is hard to beat. Fifteen sizes are built ranging in weight from 150 lbs. to 2,335 lbs. per 100 feet. Only the best chain iron is used in its manufacture, welds are exceptionally long and carefully made, and all links are tested for size and uniformity before leaving the shops.



Waterous All Steel Haulup Chain

The heaviest, largest logs can be handled on this chain. It is the longest lived and cleanest chain we build. It is 8 inch pitch throughout and carries a heavy cast steel special spaced every 6 feet. Side bars, centre links and connecting pins are all of steel, the links and bars being drilled for the reception of the pins.

We also build Malleable Log Chain, Roller Haulup Chain, Chain for Pulpwood and for Saw Dust Conveyors.

Any length can be supplied.

Our list of Specials, Sprockets, Idlers and Spools is exceptionally complete. These are are illustrated and described in our Chain Catalogue No. 108, which we will be glad to supply on request.

Pink's Lumbering Tools

The Standard Tools in every province of the Dominion, New Zealand, Australia, etc.
We manufacture all kinds of lumber tools. Light and Durable.

Long Distance Phone, No. 87

Send for Catalogue and Price List.

Sold throughout the Dominion by all Wholesale and Retail Hardware Merchants.

The Thomas Pink Company, Limited

Manufacturers of Lumber Tools

PEMBROKE - - - - - ONTARIO

MADE IN CANADA

It's a Pink anyway, you take it, and it's the best Peavey made.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

The Wise Employer

When you make a purchase in these enlightened times, your money is not placed in a little drawer called a "till"—unless, perhaps you have wandered into a store that is struggling along with obsolete methods.

Nowadays, machines keep accurate record of money coming in, also going out.

The wise employer knows that it is just as necessary to keep such an accurate record of his men—the time they come in—and the time they go out. Why should he pay his employees for time not spent on his premises? So he installs the International Time Recorder.

Result:—No leaks, no disputes, and a feeling of harmony is established between employer and employee.

Write for Catalogue.

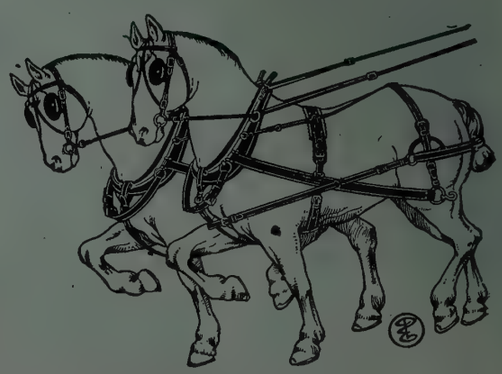
Carson Quality
Trade Mark Registered

A Harness Built for Hard Work

For lumber hauling and strenuous work in the bush a good strong harness is invaluable. And this "Carson" Quality" Michigan Lumber and Skidding Harness will stand every strain that can possibly be put upon it. It is made of the best No. 1 selected oak-tanned leather by the best of skilled workmen. The House of Carson stands solidly behind every strap and piece of material that enters into the making. It is the harness that is being used by the leading lumbering concerns throughout Canada. It has stood every test. It is the harness that you will want to protect your team and to get the most out of it.

Write us about your harness problems. Ask us for particulars and specifications. Ask for catalogue showing our full lines.



The Michigan Lumber and Skidding Harness

P. S.—We are headquarters for horse harness and equipment of all kinds, horse blankets, trunks, bags, suitcases, travelling robes and shoe findings.

They Taught Punctuality in the Army

"Military punctuality" is an expression often heard.
Being **right on the dot**—and **on the minute,** is the method strictly adhered to in the army. Thousands of young Canadians had it brought forcibly to their attention during the war, because it was an iron-bound rule.
Employers are not expected to use military methods to enforce punctuality—they don't need to.
The International Time Recorder looks after this detail—automatically.

Do You Know Where to Find the Fire Pails?

If the occasion should arise right **now** would precious moments be lost in locating them?

Ordinary fire pails are too apt to be thrown aside any old place and—forgotten. Not so with **The Eddy Fire Pail.** Its rounded bottom necessitates its being placed in a rack or upon a hook—ready to hand if the call should come.

Made of Indurated Fibreware it is lighter than wood, extremely durable and absolutely impervious to rust or corrosion.

Your Hardware Dealer will be glad to show you this dependable Fire Pail.

SPECIAL FEATURES OF THIS BAND MILL

Tension on saws maintained by steam—quickest and most sensitive form of tension yet devised.
2—Top wheel supported both above and below mandrel.
3—Extra large mandrel bearings top and bottom.
4—Top wheel has 12-inch range of adjustment.
5—Unbreakable upper saw guide raised and lowered by steam—first used on our machine.
6—Both top and bottom wheels instantly aligned by screw adjustment.
7—Operating mechanism is rapid and power driven.
8—Takes saws 12 inches to 14 inches wide.
9—Extra heavy, rigid, strong and accurately built throughout.
10—Built by expert workmen in a plant that has been manufacturing high grade sawmill machinery for over sixty years.

Stop Losing Business!

When you miss the chance of landing a contract for a new building, or for supplies, you are losing business.
You need not miss these chances.
You can have reliable advance information regarding

Building and Engineering

Contracts placed on your desk every morning through the medium of MacLean Daily Reports. Neither hearsay nor indefinite facts. Clear, worth-while, "live" information—the best business prospects available.

Write for full information.

"WELL BOUGHT IS HALF SOLD"

Better Times Coming

Signs are not wanting that Business is Improving.

In our opinion

NOW is the time to buy

Because

FIRST: Dry stocks are more complete, insuring a better selection.

SECOND: Money can be saved.

So why delay?

PEDWELL HARDWOOD LUMBER CO.

Ft. Spadina Ave. - TORONTO

FOR HARDWOODS

" LET BUFFALO DO IT "

"Why should the large consumers of lumber carry large stocks and heavy investments in hardwoods when we have 50,000,000 feet or more of hardwoods at Buffalo and 25 railroads to give them service—

Both northern and southern hardwoods flow constantly into Buffalo.

This great market is continually buying and toning up assortments. Give Buffalo Dealers your orders."

Sawn Lumber of Quality

THE coming of Spring means renewed business for the lumber merchant.

Just how much of that business you will get depends upon the way in which you are preparing, now.

In the light of past experience—haven't you profited most and given your customers greater satisfaction when you were able to offer them lumber of genuine quality?

Do so again this year. Stock up with the best obtainable—you know it will pay you.

Get in touch with us early.

Here's a Little Suggestion for the Man who Doesn't Need to Build

It is remarkable how a little lumber, a little paint and a good workman or two can make over a plain old-fashioned out-of-style house into a neat, attractive home. One man spent a few hundred dollars and the very day the simple improvements were completed he was offered $1,400 more for the property than he had ever been offered before.

The improvements he had were better than a 100 per cent. investment.

But it isn't altogether the money investment that ought to be considered. Maybe mother and the girls are dissatisfied with the plain old house. The neighborhood has been beautifying and your folks, too, may long for those attractive little features that make the passerby pause and say: "Now there's a neat little home."

Come in and see us. We have some interesting suggestions for economical remodeling. And we can supply the materials!

LONG-BELL Dealer Helps

That Really Help

Hundreds of retail lumbermen have found our ready-to-use advertisements stimulating to building in their communities. Such co-operation will continue to be an important feature of The Long-Bell Lumber Company's advertising efforts in 1921. A series of attractive advertising cuts, one of which is illustrated here, is available without cost to dealers. You can have them either 1 column, 2 columns or 3 columns wide.

We Also Supply Free:
The Long-Bell Plan Service
Slides for Picture Show Advertising
The Long-Bell Bulletin, a Merchandising Pamphlet
Metal Signs for the Yard Office

Simonds Inserted Tooth Cut-OffSaws on Greatest Slasher Rig

Sixteen 42 inch Simonds Inserted Tooth Cut-Off Saws operating on one slasher rig is probably the record number of this type of saw doing business in any pulp mill in the world.

These saws are operating daily in the mill of the Crown-Willamette Pulp & Paper Company, Oregon City, Oregon. They are 42 inches in diameter, 6 gauge and were selected from the regular Simonds stock and not made to special order. As there was no paper mill at that time that had a complete slashing rig made up of Inserted Tooth Cut-Off Saws, these 16 Simonds were selected for a trial by the Crown-Willamette Company. They at once justified their selection and gave excellent results, proving that the Simonds Inserted Tooth Saws cut easier and smoother, and eliminate slivers which generally come out at the end of the cut when other saws of a different design were used.

"The Canada Lumberman" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills etc. "The Canada Lumberman" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and " For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Vol. 41 Toronto, February 15, 1921 No. 4

SUBSCRIPTION RATES

The postal rates on periodicals having been trebled on January 1st, 1921, the subscription price of the "Canada Lumberman" in Canada, United States and Great Britain has been increased to $3.00 a year; other foreign countries embraced in the General Postal Union, $4.00. Current subscriptions will be continued at the former rate until expiration of the subscription year.

Expansion in Association Service

It is becoming evident that production and sale are not the only essential elements in the success and expansion of the lumber business. While much attention has been devoted in the past to cutting, driving and sawing logs and finding a ready market for the finished particle, little difficulty was experienced before the war in securing adequate transportation facilities.

Since 1915 or 1916, the railway situation, with constantly mounting freight rates, has become increasingly acute and irritating to many large shippers, and particularly those of forest products. Many large concerns report that in the matter of weighing cars, estimated weights, overcharges, demurrage, stop-off privileges, prepayment of freight, scaling and involved tariff regulations, along with claims for rebates, delayed shipments and other traffic tangles, a special staff has to be employed, devoting the most of its time to work which should not require more than ordinary supervision. Even then, it is impossible to get refunds from the railways without a long drawn-out battle and going through a routine that entails an expenditure of much time, patience and perseverance. The rates on lumber shipments have ascended so inordinately during the past few months that the business was brought to a standstill, and only during the past few weeks has there been any evidence of recovery.

The Canadian Lumbermen's Association is taking a progressive step in deciding to appoint an expert to take charge of a Traffic Department, which will be established to straighten out many confusions, in routes, rating and rebates, and eliminate some of the constant bickering and turmoil, which prevails between shippers and the roads, over matters which should run as easily and smoothly as the business of a bank or a loan company.

The Committee on Transportation appointed this year is composed of lumbermen, who are thoroughly familiar with transportation problems—some of them former railway officials. In instituting a live, vital, aggressive Traffic Bureau, the Canadian Lumbermen's Association will render its membership useful and valued service, and will be able to accomplish, by concerted effort and co-operation, much which would never be brought about by isolated means.

A Traffic Bureau is being established, not with the idea of waging war with the transportation companies, but to watch and protect the interests of the members of the C. L. A., see that their claims receive attention, and that they are not subject to any overcharges or unjust levies. To use a colloqual expression, there is a well-defined belief that the railways have been "slipping over something" on the Canadian lumbermen during the past two or three years and "getting away with it." The lumbermen have had their eyes opened and are determined, in conjunction with other public bodies, to resist to the utmost all encroachments, exactions and arbitrary acts on the part of the common carriers of Canadian commodities and merchandise.

Making Target of Wooden Shingles

The bill, which it was proposed to introduce in the Ontario Legislature during the present session, greatly restricting the use of wooden shingles, has been the subject of considerable discussion in the press. The strongest advocates of the radical measure, which has been withdrawn for a year, have been certain insurance companies who contend that the wooden shingle is a fire hazard and they would have it "cribbed, cabined and confined." On the other hand, contractors, builders, real estate owners, home-owners, and retail lumbermen have been presenting arguments why such a retrograde and biased piece of class legislation should not be countenanced. It would strike a blow at that great institution, the Canadian home. If house-building, already sufficiently retarded, should be further interfered with, the comfort and welfare of the people will, even in these days of peace, be little better than during the progress of the war.

The great need of the hour in Canada is more houses. The cry raised has been that building has been so expensive, neither the home-owner, the capitalist nor the speculator cared to undertake any extensive work on the ground that he could not obtain a sufficient revenue from his investment, on a basis of lease or sale. Then a sudden turn in the wheel of fortune might so reduce values that an appreciable loss would inevitably result. There is a wide agitation for cheaper material. Lumber has already come down in price from 30 per cent. to 50 per cent. Quotations for shingles have decreased fully 50 per cent. from what they were a year ago, and still structural undertakings for some reason do not proceed on the large scale that they should. It all goes to show that other materials must drop in consonance with lumber.

To prohibit the use of the wooden shingle would add to building costs. On the great majority of Canadian homes the shingle has been and may be for generations to come the most popular, durable, cheapest, convenient and artistic covering. The alleged fire menace of the shingle has been greatly exaggerated and grossly maligned. No one pretends that in a congested district, on a central business block or large smoking factory, wooden shingles make the best roof covering, but in residential and suburban districts there is a widespread demand for them. As has been pointed out, any repressive legislation that may crop up in the future should be promptly throttled, for the wooden shingle in point of looks, comfort, service, price and long life, is ideal for every home. Its use should not be hampered by any fanatical legislation.

It has been well said that if a city or a community has reached a point where it no longer appreciates the erection of homes, or has arrived at a stage where it can afford to have house-building hopelessly retarded by visionary and impractical ideals and embargoes—why well and good. If, however, a community desires to remain in the race for supremacy with its neighbors, to be a live, vital, red-blooded centre, believing in the welfare, happiness and comfort of its people, then nothing should be launched in the way of a partisan and short-sighted ordinance, which can do no good and may work much harm.

Cleaning the Forest of Debris

At the various forestry meetings, there have been discussions as to cleaning up debris on land 100 feet each side of the boundary line of the railway right of way. The St. Maurice Forest Protective Association started work of this description in August last. The work is thus described by H. Sorgius, the manager:

"We had two crews, one at mileage 22, near Creek des Prairies, and the other at mileage 44, near Rapid des Coeurs. We paid our men at a wage ranging from $70 to $90 per month, and boarded them. This work was done during the period when jobbers were hiring men to go to the woods. Naturally this disorganized our crews. We cleaned this strip of everything from one inch down, and only left the larger green trees standing. The work started on August 10th and finished September 24th. Our opinion is that this work should not be continued, as the cost is prohibitive, for the protection that we shall derive from same. In addition we will have the cost of cleaning and burning said strip every year. The most a crew of four men would clean in a day would be a strip of 100 feet deep by 100 feet long and pile the debris in piles ready to burn.

"We tried to clean up the forest debris without cutting the brush, or small trees, but this was not found feasible, as the brush was so thick that we had to cut same so as to get the debris. The forest in these sections was very dirty, as ties were made there several years ago during the construction of the railroad. In the old burns the clearing would cost as high, if not higher, on account of the dead trees."

Having regard to the experiment, Mr. Sorgius suggests that the law to burn all the forest debris on a depth of one hundred feet from the boundary line of the railway right-of-way should be amended or annulled, as this work is too expensive for the benefit derived therefrom. The amendment should read, that the debris should be cleared and burned only when the area is being logged

Basic Elements in Logging Activities

Considerable discussion has been heard lately regarding the alleged lower cost in getting out timber and pulpwood for the coming season. Many reports have appeared in the papers to the effect that wages have been considerably lessened, that the outlay for supplies of all kinds has gone down, and, this season's crop of logs should, therefore, be considerably cheaper than that of last winter. Other delusions also prevail, and in correspondence with representative lumber concerns in various parts of eastern Canada, the "Canada Lumberman" learns that this year's supply of raw material will cost the operators fully as much, and. in some cases, more than last year. The reasons are that wages at the beginning of the season were considerably higher, and at the time the bulk of supplies was contracted for, no price reduction had manifested itself in flour, sugar, oats or other commodities. In other words, early expenditures were practically uncontrollable, and in not a few instances above those of the corresponding period of the previous year.

It is interesting in this connection to point out some facts affecting the cost of producing sulphite pulp. Like the lumber business, many imagine that such an industry means exceptionally large profits, whereas disbursements have jumped up on every side. The "Canada Lumberman" has been able to obtain some figures which are said to represent a general condition in the industry.

In common with the movement to bring prices down to a reasonable basis, the figures should prove instructive as showing, so far as pulp is concerned, the present state of affairs surrounding its manufacture, existing costs and what the latter may be for some time to come. The various items demonstrate that average cost conditions are the chief factor in controlling prices. It takes a great deal more capital nowadays per ton for the output of sulphite pulp than it formerly did. Here are some figures which are published, not with any view or purpose to defend the price of pulp, but as shedding light on a line closely allied and, in numerous respects, paralleling lumber costs and production in so far as getting out the logs and other operations are concerned:

"The average interest has risen from about 6½ per cent. in 1914, to about 8 per cent. now, and the amount of capital required is double. The Quebec Government charged stumpage rates of $1.05 per thousand feet log measure in 1918, $1.60 in 1919 and $2.70 in 1920.

"The timber limit owners have to stand the risk of loss from fire and disease. For instance, between the years 1910 and 1916 the limit holders in the Province of Quebec suffered a heavy loss from damage done by the spruce budworm to the balsam timber between the St. John district and the head waters of the Upper Ottawa. Throughout this district 50 per cent. of the balsam, which amounted to about 30 per cent. of the total stand, was killed or badly damaged by the budworm. Part of the damaged balsam was saved before it was too far gone, but the loss was very heavy.

"The cost of wood from limits depends upon the rates of wages and the outlay for food and fodder. In 1914, log makers received $25.00 a month and board and lodging, in 1919, $63.00, and at present $80.00. In 1916, the Government Index Number for Food and Fodder was 159, and in 1920, 348. In 1914 pork was 17½ cents per lb., beans 6¼ cents per lb., and flour 3½ cents per lb.. and in 1920, 34½ cents, 11½ cents and 8 ½ cents per lb., respectively, in January when the supplies for the ensuing twelve months were taken into the bush.

"In 1915 the average rate of pay per man per day at a representative pulp mill was $2.22 and at present $5.32. In 1914 the Government Index Number for building materials was 139 and in 1920, 385.

"In 1914 the freight rate on coal was $2.80 a ton; in 1920, $5.17; on sulphur $8.20 in 1914 and $16.40 in 1920; on pulpwood, 10¼ cents per 100 lbs. in 1914, and 22½ cents per 100 lbs. in 1920."

Editorial Short Lengths

Out of 850 million acres of virgin forest the United States has not more than 150 million acres left. This is being cut down or destroyed each year four times as fast as new forests are growing. This means forest devastation in a comparatively short time. At the present time there are more than 100 million acres of waste land, formerly forest, which could be growing timber but is not. Canada can learn many valuable and helpful lessons in forest preservation, protection and reproduction from her southern neighbor.

In the latest report of the Quebec Streams Commission, reference is made to the effect of the storage dams upon log driving operations. The commission have a contract with the Brown Corporation to operate and to keep in good order the dams on the Upper St. Maurice (Gouin Storage Dam and the three dams on River Manouane).

The report states that no doubt the storage reservoirs of the Upper St. Maurice River are an advantage to the lumbermen as they decrease the flood level in the spring in the upper reaches which are near the dam, and in this way, the logs are not scattered in the bays and over the low lands. In the second place, the regulation of the flow to 12,000 second-feet at Shawinigan gives them a discharge which they would not have for the driving in the lower reaches. It is evident that a considerable shot of water decreases largely the cost of log driving. Therefore, it is only fair that the driving association be called upon to pay to the Commission an annuity for the benefits it derives from the storage. But this arrangement should be made in such a way so that the lumbermen have an interest not to demand more water than they actually require. To reach this purpose, it seems that an annual amount could be paid for the benefits derived from the regulation to 12,000 second-feet. Then, if any request be made to the Commission for water outside of the regulation, this water shall be paid for over the annual amount mentioned above, at a rate of so much per square-mile-foot. Taking as a basis the value of a square-mile-foot to power-users, the Commission would be sure to give satisfaction to the lumbermen.

The yard manager whose method of doing business was based on—"Give me lumber and let me sell it"—is a dead bird in the lumber game. Even the place where he was, has disappeared.

Wholesale Lumbermen Hear Splendid Reports

Every Department of Aggressive Association Doing Excellent Work—New Board of Directors Elected and Activities Outlined for Coming Year

Encouraging reports were presented at the annual meeting of the Wholesale Lumber Dealers' Association, Inc., which was held at the Albany Club, Toronto, on January 29. During the past three years the organization has grown steadily in numbers and influence and the reports of the different committees showed that much work had been undertaken during the last twelve months and carried out on a business-like basis. The attendance was large and the proceedings passed off enthusiastically and harmoniously. A. C. Manbert presided.

When the election of officers for 1921 came up, Mr. Manbert thanked the members for the support and courtesy received at their hands during his incumbency of office and trusted that his successor would have the same delightful experience.

It was moved by A. E. Eckardt, and seconded by W. J. Lovering, that Mr. Manbert be re-elected for another term. This the chairman positively declined, as he felt that, in the best interest of the association, new blood should be brought into the executive. A motion was finally made and carried that the term of office of chairman should be for one year, the resolution being proposed by A. E. Clark and F. H. Bigwood.

New Officers for Coming Year

The election was then proceeded with. A. E. Eckardt, vice-chairman for the past year, was unanimously elected to the position of presiding officer for the coming twelve months. Amid applause he was escorted to the front by Messrs. Clark and Spragge. For the Board of Directors there were twelve nominations, five to be elected. The result of the ballot was the choice of D. C. Johnston, Frank A. Kent, Guy H. Long of Hamilton (re-elected), A. E. Gordon and G. E. Spragge.

The officers for 1921 are:—

Chairman—A. E. Eckardt.

Secretary-Treasurer—H. Boultbee.

Board of Directors—D. C. Johnston, Frank A. Kent, Guy H. Long, A. E. Gordon and G. E. Spragge.

The firms which the new directors represent are respectively: Union Lumber Co., Seaman, Kent Co., Long Lumber Co. (Hamilton), Terry & Gordon and Victoria Harbor Lumber Co. (Toronto).

Chairman Eckardt acknowledged the honor done him and asked for the co-operation and support of all the members. Hearty votes of thanks were also tendered the retiring chairman, Mr. Manbert, and Secretary Boultbee for their faithful and efficient services.

United Front Against Railways

A. E. Eckardt reported that there was no particular question before the Transportation Committee, of which he was chairman, at the present time; that they had given considerable attention to many matters. He referred to the increase of several months ago—40 per cent. in the east and 35% in the west—in freight rates. Some time ago it had been impossible for Toronto shippers, in the matter of ocean freight rates, to get a quotation on a standard basis for export. Quebec was, apparently, favored, but all quotations to Ontario firms were made on the basis of 100 lbs. Through the influence of Sir George E. Foster, the association had been able to secure the same privileges as the Quebec men.

In regard to Tariff 14, relating to the responsibility of scaling and minimum weights, the speaker said they had tried to get an amendment of this tariff. Another conference which was to have been held during the week with the Canadian Freight Association, had been postponed.

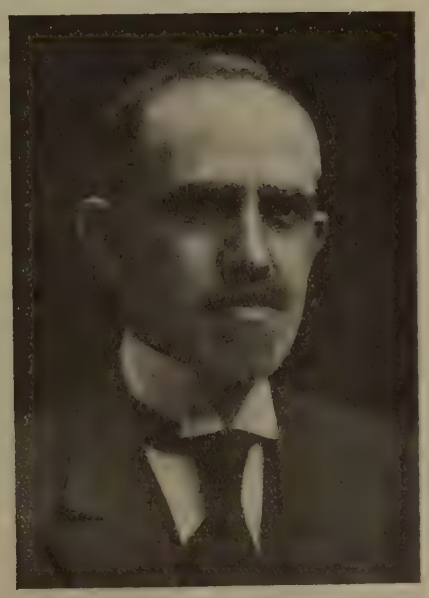
Since the Canadian Lumbermen's Association had decided to establish a Traffic Bureau, the Transportation Committee thought it would be well to enlist their co-operation. Mr. Eckardt pointed out that unless the associations joined together to fight the railways, they would not likely get anywhere. There were many questions to be brought up and settled in the future, such as switching charges, reciprocal demurrage, signing the present forms of siding agreements, etc. These were other items which would have to be well thought out, and, in any freight rate inquiry, that came up during the summer, he thought the associations should be ready to meet the railways and present their case unitedly and aggressively whenever a sitting was held in Toronto or Ottawa.

Mr. Eckardt then explained the payment of freight charges on shipments to and from the United States, in which a temporary adjustment had been made of the basis for payment of freight charges It was particularly important to remember that freight charges on shipments from U. S. points must be forwarded "collect," and freight charges on shipments to U. S. points must be "prepaid." Another matter that should not be overlooked was to advise U. S. shippers to forward all freight charges "collect."

The plan, in regard to the payment of freight charges, which went into effect on January 22nd, was as follows:—

> The railway companies will publish a tariff naming a surcharge to be added to the freight charges on business to or from the United States when paid in Canada.
>
> The surcharge will be an amount represented by 60 per cent. of the governing rate of exchange, fractions less than one-half being disregarded, and fractions one-half and over being counted as 1 per cent.
>
> Collections will be made at the rate governing on the date

A. E. Eckardt
Newly-elected Chairman of W.L.D.A.



A. C. Manbert
Retiring Chairman of W.L.D.A.

A. E. Gordon
Newly-elected Director of W.L.D.A.

G. E. Spragge
Newly-elected Director of W.L.D.A.

Guy H. Long
Re-elected Director of W.L.D.A.

Frank A. Kent
Newly-elected Director of W.L.D.A.

D. C. Johnston
Newly-elected Director of W.L.D.A.

of shipment from Canada or on the date of arrival at Canadian destination.

The governing rate of exchange will be that quoted for New York funds by the Bank of Montreal at noon in Montreal on the 14th and last day of each month.

The governing rate on the 14th will apply inclusively from the 15th to the end of the month following, and the governing rate on the last day of the month will apply inclusively from the 1st to the 14th of the following month.

This arrangement will not apply on:—Shipments from the United States to Canada where the governing freight classification or tariff usually requires that freight charges be prepaid; coal and coke from United States to Canada; shipments imported or exported via Canadian ports destined to, or moving from United States points.

In closing, Mr. Eckardt emphasized the great work in connection with transportation problems and rates during the coming year.

Freight Charges Are Excessive

A. E. Clark said the freight rates on lumber are exorbitant. This is one of the features that is helping to kill the lumber trade at the present time. "We are looking in the Canadian Lumbermen's Association to the appointment of a traffic expert, and through our new Transportation Committee, composed of a number of former railway men and officials, we will work in conjunction with the Canadian Manufacturers' Association. We hope to have several amendments carried into effect, such as the track scale allowance of 500 lbs. for variation in the tare of a car owing to the accumulation of debris, etc. This has been absolutely wiped out, and we hope to have it restored. At the present time, as you know, there is no allowance whatever. The original concession of 500 lbs. was not intended to cover foreign matter in the car but discrepancies in the weighing of scales during the varying climate of the winter months. By eliminating this, we now feel that the railways have an advantage over us to the extent of 500 lbs. on a car which they are not carrying. At Ottawa, Mr. E. R. Bremner said his firm showed a loss of $3,500 on shipments, as compared with previous years, through this allowance being done away with."

Mr. Clark thought that the lumber associations should all work together and when they appeared before railway boards, should be in a position to establish their contentions. In his opinion, railway employees were overpaid and were not showing any increase in efficiency or putting in any more time for the money they received. No one could point a finger of scorn at the lumbermen and say to-day that they were profiteers. The railways were getting more money out of the business than the lumbermen were themselves. Mr. Clark expressed the hope that the association would be in a position to show that the present carriage charges on forest products are arbitrary, and said all should work together for the lumber interests and against anything that injured that industry.

A. C. Manbert said that the distribution problem was just as vital to the industry as the purchasing and selling of lumber. It was necessary that the stocks should be moved promptly in order that good results should follow.

After the reading of the Trades Relation report by W. E. Bigwood, which will be found on another page, some discussion took place regarding the proposed duty on lumber. Mr. Bigwood said, that so far as he could learn, the general feeling across the border was in favor of the elimination of any proposed duty on forest products from Canada, and he believed that the lumber industry as a whole had more friends in this attitude than ever.

A. E. Clark remarked that he had been present at the executive meeting of the National Wholesale Lumber Dealers' Association in New York during the past week. While that body did not take action as an association, still their sympathies were against any duty being placed upon lumber from Canada. Canadian lumbermen should not, however, sit idly by until it was too late. If a duty was placed upon Canadian lumber crossing the border, it would be up to Canada to retaliate, a course which all would regret.

A. E. Gordon stated that there was no duty on lumber entering Canada at the present time other than where the product was dressed on more than one side.

Membership—Finances—Information

The report of the Membership Committee was presented by A. E. Gordon. It showed that the membership at the beginning of the last year was 34 and to-day it is 40 which is very satisfactory. H. G. McDermid reported for the Bureau of Information and declared that there had been a vast improvement of late in the number, sending in the information to Secretary Boultbee before the middle of the month; in fact during the past two months there had been practically 100 per cent. efficiency, which enabled the Bureau of Information to be of much service and value to the members.

W. C. Laidlaw reported on behalf of the Insurance Committee, stating that they had little to do during the year except that, if the proposed measure against the use of wooden shingles should be pressed, it would be up to the association to give the matter attention. At a time when cheaper houses and lower rents were the cry, it did not sound reasonable that the legislature should put up any barrier in the way of construction. There was, no doubt but that shingles were the cheapest roofing because of their economy, durability, convenience and long life.

J. P. Johnson reported on behalf of the Arbitration Committee, showing where a couple of disputes, which might have led to lawsuits, had been amicably adjusted through the good offices of this committee. It was decided that a record of all cases settled should be kept on file as a matter of precedence and for reference purposes.

C. G. Anderson, of the Audit and Finance Committee, reported that the books of the secretary-treasurer had been audited and found correct. Speaking of finances, he said they should not give longer credits, and if they desired to keep things going to-day, collections woud have to be kept up to the mark.

The report of Secretary-Treasurer Boultbee showed practically the same balance on hand as last year, and everything in connection with the financial arrangements in a sound state.

Some discussion took place in regard to the new standard order form which has been prepared by the Ontario Retail Lumber Dealers' Association and is now in use by some of its members. On motion it was decided that the secretary write a letter to the president of the Retail Lumber Dealers' Association, requesting, before the final adoption of this order form and its general use and acceptance, that there should be a conference with a committee from the Wholesalers' Association to see if certain features can not be eliminated and a form drawn up that will be satisfactory to both retailer and wholesaler.

Aim at Standardizing Dimension Requirements

Association of Wood Turning Industries Conducting Extensive Investigation Relating to Dimension Stock—High Grade Lumber Scarce and Waste Must Cease

The National Association of Wood Turners, Inc., of which William A. Babbitt, South Bend, Ind., is general secretary, is taking up a most important and vital work in the task of standardizing the principal elements of the dimension requirements of the manufactures of wood products in order that the economies of properly manufactured dimension stock may be secured to the natural advantage of all concerned. The association is also much concerned in the problem of conserving the waning supplies of wood.

The purpose of the organization is to establish unity of aim and effort among all industries using wood with reference to their principal basic raw material, and to mobilize the influence and resources of these industries to protect and conserve the sources and utilization of this fast diminishing supply.

The first expression of this unified purpose of the wood using industries came in the assistance given in formulating the proposed Forestry bill now before the U. S. Congress; and in securing the practically unanimous support of all interested industries for this bill. The features of the proposed legislation include an appropriation of $1,000,000 a year to enable the U. S. Federal Government to co-operate with the states in carrying out their forest policies. Under this plan the states would be given freedom to decide on the details of their plans so long as they conform to certain standards determined by the Secretary of Agriculture.

Fire prevention is considered the basis of all forestry work and it is expected that most of the money will be used for that purpose.

The plan provides for the further appropriation of federal funds for the purpose of purchasing national forests, and for investigations of various forest problems. The plan is to be effective for five years.

It is admitted that the chief beneficiaries of a constructive forestry programme are future generations, and that the bills must be paid by present day folks. This is as it should be. We have no moral right to hand on our forest heritage looted and despoiled; we have no right to make our country a second China.

The Association of Wood Using Industries has found its second objective in a programme to unify the wood using industries with reference to their raw materials by organizing a thorough going, scientific effort to eliminate every possible waste of stock now consumed by the wood using industries.

Checking the Element of Waste

A brief preliminary survey of this problem developed certain outstanding incontestable facts, most of which are familiar to woodworkers.

1. The estimates of the Forest Service show that if only the economies of lumber could be secured which can easily be expected from the conservation policy of the association, the present supplies of timber can be made permanently sufficient for the needs of the nation.

2. Under present conditions of progressive depletion of timber reserves, there has developed a corresponding factor of waste, also progressively increasing in amount, owing to the decreasing quality of lumber produced.

3. Practically all hard woods, and a large proportion of soft woods are utilized in the form of dimension, and not as plank lumber. But nevertheless, the enormously wasteful process of securing the necessary dimension for the manufacture of the products of the wood using industries, by first manufacturing plank, and then manufacturing dimension from plank, is everywhere almost universal.

4. Furthermore, the production of net dimension has never been a practical commercial proposition, except in a very limited way. There are numerous reasons for this condition, but no excuse. The fault is both with the producer and equally with the consumer. Neither party appreciated the fact that net clear dimension is worth more to produce and worth more to buy than the best grades of commercial lumber. Consequently, we have had careless and shiftless manufacturing and grading of dimension on the one hand; and an ignorant and suspicious buying policy on the other hand.

No Official Standard Lists

5. This situation persists in spite of the high cost of all lumber, aggravated by high rail costs. A series of studies covering over two years seems to establish thoroughly the fact that the economies and other advantages of the production and use of dimension stock are still not utilized because there are no official standardized lists for dimension, covering the requirements of the Wood Using Industries; and consequently no established market for dimension. The hazard is too great for the manufacturer of dimension. Having no general market, a cancellation means practically the total loss of the dimension he has manufactured. The hazard is too great for the user of dimension stock. If he contracts for his raw materials in the form of dimension stock and the contract is thrown up, then he has no place to replenish his stocks.

6. In addition, there are contributory causes due to the heritage of practices which were established when conditions were different. Formerly, low cost of lumber and cheap freights made it convenient to ignore these questions which are now so pressing. Once there was a time, quite recently, when we were able to buy very high grade stuff without difficulty. Now the trees that were passed up in those days are the staple of the lumber market.

No doubt all these reasons were at one time decisive. But not any more. Cheap lumber is gone. High grade lumber is increasingly scarce. Low freight rates belong to the regretted past. Moreover, manufacturers of wood products as well as manufacturers of lumber have come to understand better the utility of properly manufactured dimension stock. One great lumber association is conducting a widespread propaganda among its members along this line.

Task of Years But Worth While

After a careful consideration of this subject, the Association of Wood Using Industries has decided to undertake the task of standardizing the principal elements of the dimension requirements of the manufactures of wood products, in order that the economies of properly manufactured dimension stock may be secured to the mutual advantage of all concerned.

This decision has been reached not only with a full appreciation of the advantages to be secured, but also with an equally full appreciation of the difficulties in the way. It is evident that this great adventure in conserving our forest resources, with profit to the men who do the conserving, can be successful only with full and fank co-operation of all parties at interest. Nor is it to be expected that these results can be quickly secured. It is a task of years, but worth the undertaking.

The execution of the enterprise has been placed in the hands of Mr. Wm. A. Babbitt of South Bend, Ind., chairman of the Standardization Committee. Mr. Babbitt is general secretary of the National Association of Wood Turners, and has conducted very extensive investigations regarding the whole problem of dimension stock.

Will Augment Forest Growth of Province

In an interesting and candid address before the Toronto Board of Trade lately, Hon. Beniah Bowman, Minister of Lands and Forests for Ontario, said that he will introduce a bill at the present session of the Legislature to provide for reafforestation. The Minister, he said, will be given power to buy or lease lands for this purpose, and authority will also be given him to turn over or make use of Crown lands for the same purpose. Provision will also be made for individuals who care to buy rough lands to carry on re-afforestation, and he added, that there were those who were prepared to devote their money and time to such a project. Some farmers were also willing to take up the matter in a small way. It was intended to provide a scheme of re-afforestation for the province larger than had ever been undertaken before. "We have a great deal of land in this portion of the province—sandy land, etc.—which should be growing trees," he said, "and if this land is so used, in years to come there will be growing forests which will be worth a great deal to the generation that is to follow."

Mr. Bowman urged the necessity of taking care of the existing timber resources, and expressed his opinion that the exchange rate between Canada and the United States would be very much higher, but for the large exports of pulpwood from Canada across the border. He intimated that his department intended to put a stop to the waste which has been going on in the past on the timber lands of the province, and said the proper way to handle the problem was to set aside areas for the industries concerned and for the Government to take control of the timber operations.

Western Lumbermen Hold Enthusiastic Rally

Representative Gathering Assembled in Winnipeg—Heard Instructive Addresses on Many Timely Topics—Association Enjoys Most Successful Year

"The best yet" was the slogan which prevailed throughout the recent annual convention of the Western Retail Lumbermen's Association held at the Fort Garry Hotel, Winnipeg, Man., on Jan. 26-28. The addresses given were many and touched on a variety of subjects which held the attention of delegates throughout the entire sessions. It was a great pleasure for the executive to witness their plans being carried out so smoothly and at the end of the instructive three days' proceedings to shake hands with such a satisfied and appreciative body. Co-operation and better service are the watchwords of the Western Retail Lumbermen's Association.

The gathering opened on January 26, with Mr. Theo. A. Sparks presiding. The Lieutenant-Governor of Manitoba, Sir James Aikins, was introduced to the convention by the president, and gave an official welcome to the delegates on behalf of the province in an address which spoke of optimism and courage as the mainspring of future Canadian prosperity.

Outlines Work of the Association

President Sparks, in reviewing the events of the year, and remarking that the entire lumber consuming public had benefited by the existence of the association, said that in their insurance department they had saved possibly half a million dollars annually. Special plans of building were supplied under the supervision of a qualified architect to prospective builders, and the members of the association should not overlook the fact that their association was certainly the first medium in Canada to supply them, and he thought possibly on the continent, thus breaking absolutely new ground in this respect. Speaking of the plan book which was the first of its kind in the West and was distributed free to customers, he observed that the members did not realize the amount of work entailed in its production. Then their Training Course for Retail Yardmen had been sold not only to a considerable number of their members in Canada, but to retail lumbermen in practically every state of the Union.

"Due credit has never been given you as lumbermen in the building up of Western Canada, actually and figuratively," said the president, "as the public has taken the service you render them for granted. The credits of the Retail Lumbermen of Western Canada have run possibly to $40,000,000 annually, granted frequently to the homesteader without capital; enabling him to erect buildings, which was a necessary requisite in the securing of his patent, on credit. The extent to which lumbermen have acted as bankers in this connection, when it was impossible for your customer to borrow money elsewhere, with which to buy lumber, is a page in the history of Western Canada of which I hope to see some day an appreciation."

Fred H. Lamar, association secretary, in his annual report, said that the Western Retail Lumbermen's Association has just passed another successful year financially. This success can be better measured when it is considered that since the inception of the association in 1891, the annual dues have never been increased, in spite of the fact, as you all so well know, that everything purchased to-day in our business, has increased threefold in price. I might also add that the various services available to our members have also increased many times. Another fact, worthy of note, is the growth in the active, or paying membership of the association., Our surplus at the present time is $10,716, and our liquid assets at the present time—and these figures have been carefully compiled—$5,879.04. This calls for no further comment, as the figures speak for themselves.

Cost Factor in Every Business

Curtis M. Johnson, Rush City, Minn., gave an address on "The Cost of Doing Business." Mr. Johnson said he was there to preach a certain ideal. He was a hardware man, but the problems of the lumber man and the furniture man and so on were about identical. There was no royal road to success. Many thought that if they were in the other fellow's line they would get along better, but he did not think they were justified in taking that view. All of us have a long row to hoe. We could not expect to get a profit out of business unless we knew what it cost to run the business. We could not attain what we are striving for, happiness, unless we got a little profit, with the emphasis on the "little." While dollars and cents were not the whole thing, we could not expect to get happiness out of our business unless in the promotion and handling of it we got a fair profit that would keep us on the sunny side of life all the time.

In the business the expense of running it must be bridged before we can get to the shore of profit and happiness on the other side. It was often the ignorant, unbusinesslike man who set the lowest prices in a community, and it was essential to figure out costs in order to sell at prices which would command a fair profit on the investment.

Supplied by members of the audience with items, Mr. Johnson drew up an expense sheet in connection with a small town lumber business, the annual volume of which was $30,000 on an investment of $15,000—$12,000 representing stock and $3,000 yard equipment. The expense sheet was as follows:

Interest on investment at 7 per cent.	$1050
Rent, included in the $3,000.	
Salary	1800
Help for five months	500
Depreciation on stock	100

Theo. A. Sparks
President Western Retail Lumbermen's Association

R. Skov, High River, Alta.
Vice-President of the Western Retail Lumbermen's Association

Fred H. Lamar
Secretary Western Retail Lumbermen's Association

Depreciation on equipment	100
Donations	100
Insurance	75
Light and heat	100
Office and supplies	25
Drayage and delivery	400
Phones	50
Advertising	150
Calendars	150
Travelling expenses	50
Goods stolen	50
Bad debts	300
Collection expenses	50
Taxes	300
Dues in association and for trade papers	15
Miscellaneous	85
Total	$5300

Mr. Johnson showed that the cost of doing business worked out at 17 2/3 per cent., thus (cutting out the fraction to simplify figuring) leaving only 83 cents out of every dollar taken to pay for the cost of the delivered goods.

Instancing how the cost of the delivered goods had to be reckoned with, Mr. Johnson took the case of cement at $4.20. If sold at a profit of 95 cents, the net profit would be 45 cents, with the cost of doing business based on 17 per cent.

In the cast of wall board, if 1,000 feet cost $60, and it was retailed for $85, the profit would be $10.55 on the 17 per cent. business cost basis, and if $4.25 discount for cash was allowed the profit would be $6.30.

In the case of lime, if the cost was $3.75 and it was retailed at $4.50 and the 17 per cent. principle were applied, the net profit on the 76 cents difference in the purchase and selling price would be just one cent.

Mr. Johnson emphasized that prices should be dictated by the cost of running the business. "Unreasonable, ignorant people should not be allowed to rule prices," he said, "nor on the other hand, do we want to get on any proposition to get prices controlled by any other means. Many people believe that we come to these conventions to set prices. That has always been kept out of conventions, and I hope it always will be. There are fellows at home who need this kind of dope. Get the dealers in your community to work together on correct lines of doing business so that you may all get along better.

When speaking on the bad debts item on the expense sheet, Mr. Johnson took the opportunity to urge the importance of getting together and working out a plan whereby bad debts would be eliminated to a large extent by dealers keeping each other informed of men who habitually fight shy of paying.

Many Stirring Addresses Heard

An excellent address was given at the convention by Dr. Stanley Krebs, of New York City, dealing with the psychological end of business. W. P. Dutton, Winnipeg, and F. E. Sine, Calgary, also gave practical talks on the affairs and problems worthy of the attention of the association and every business man of the West. There were many other features, including an able address of H. B. Armitage of Edmonton, on "Selling Odds and Ends," and Curtis M. Johnson of Rush City, Minn., on "Community Development as a Road to Happiness."

Rev. Dr. Leslie Pidgeon, of Augustine Presbyterian Church, Winnipeg, and president of the Rotary Club, gave an inspiring address on "Social Responsibilities." Every man has got to make his contribution to the community through the line in which his energies are chiefly employed, he said. He pointed out the physical and psychological effects of daily actions or habits, showing that the steady practice of good habits wove the matter of sheer right acting into a man's brain centres and made it an easy thing for him to do the right under all circumstances.

The Officers for Coming Year

The officers elected at the Western Retail Lumbermen's Convention for 1921 were:

President—Theo. A. Sparks, Winnipeg.

Vice-president—R. Skov, High River, Alta.

Marketing Western Forest Products in East

Financial Instability Behind Wide Range of Quotations Between Different Mills—Necessity the Mother of Other Things Besides Invention

Editor, Canada Lumberman:—

My attention has been called to an article in the "Canada Lumberman," of recent date, under the title of "Get Too Many Sap Stained Clears," in which your correspondent domiciled in Vancouver, gives voice to certain impressions gleaned by him on a recent pilgrimage to Ontario. The title of that article is at once appropriate and misleading, because any sap stained clears are "too many," and misleading owing to the implication that this class of material—sap stained—as described, has been arriving in these parts in considerable volume. As a matter of fact, the heaviest shipments of rough green fir finish to Eastern Canada were made during last winter and early spring. By the time Old Sol had developed his usual summer energy and was in a position to do much damage the movement of this stock had diminished practically to the vanishing point. The few cars which did come through, however, in hot weather, and in which sap stain developed were unquestionably "too many." The moral is that if green fir clears are to be shipped cold weather is the proper time. Material shipped in summer should be, at least, surface dry.

The question as to whether buyer or seller is to assume the "burden" of loss entailed in this way should not admit of very much argument. If the buyer is informed or cautioned at time of sale that green fir clears carry a certain amount of sap which will stain if shipped in closed cars during hot weather, and assumes the risk—well and good. There is nothing more to be said. If, however, as has been usually the case, the buyer has bought this stock for the first time, and has not had sufficient experience with it to be acquainted with its various peculiarities; and if the seller accepts his order for first and second clear fir rough green, without calling his attention to the probability of stain developing, an interesting situation may arise. The material arrives at destination, a considerable quantity being so badly stained as to be of no use for finish, and for which the buyer refuses to pay. It appears, however, that the seller can and does produce a certificate of inspection showing that the material was graded at the time of shipment by a licensed inspector, and the imposing document, red seal and all duly "sworn to" is put in as evidence. Who is to be the goat? According to the business ethics of a past generation whose central idea was: "Let the buyer beware." There would be nothing to it, but in these "more enlightened days," when business relations carry something of the spirit of service, the seller cannot afford to take an attitude so arbitrary. His position is unfortunate. He must make one of two admissions. Either he can take the position that he did not know that green fir sap clears would stain when closely piled in hot weather, which would at least seem odd; or that knowing the danger he attempted to "put something over"—also "odd" in these enlightened days, or perhaps another word would suit better.

Still we have not settled the question of responsibility. This of course, depends on how the sale was made. If stock was sold f.o.b. shipping point the buyer is stuck; but if, as is more usual, the price agreed on includes freight to destination, the arrival of material in good condition is the seller's affair, and at this point rests the buyer's justification for refusal to pay.

Financial Instability Causes Price Variations

The next point dealt with by your correspondent, viz.. The fluctuation of coast prices being complained of by Ontario dealers, is also an interesting one. Mr. Rockefeller, in another commodity line, seems to have fairly well solved the fluctuating price problem, in perhaps the only way it can be solved. The Ontario dealer's complaint is probably based on his experience of a few years ago when only a few of the larger B. C. operators were looking for a market in this section. In those days of gently advancing prices all the lists carried by the B. C. salesmen were in line and the dealer could figure pretty well from month to month what his replacement costs would be. During the past year, however, and particularly during its latter

half, the Eastern Canadian dealer has been the only prospect in sight. The B. C. manufacturers and wholesalers have concentrated on him and their desire to sell has been reflected in pirce concession varying as that desire has varied in intensity. Taken together the spectacular advances of the winter of 1919-20, and the inevitable reactions of the latter part of 1920, western prices have certainly been leaving a zig-zag trail and it is small wonder if the Ontario dealer would like to know what next is going to happen.

Financial instability is, of course, behind the wide range of quotations between different mills, necessity being the mother of other things besides invention—and unless a second Mr. Rockefeller arises, or the weaker concerns are forced to let go, we may look for more of the same ups and downs.

With reference to one-quarter scant dimension or "bill stuff" Mr. L. L. Brown, B. C. Lumber Commissioner, Toronto, has, in his archives, a document showing comparative strength of B. C. fir, sized three-eighths scant or coast standard and eastern hemlock and spruce sized to Ontario sizes. The verdict is in favor of the three-eighths scant B. C. fir for equal grades, and naturally the western travellers have overlooked this talking point when calling on the trade. In connection with this particular class of material, however, the B.C. operator and his "guide, philosopher and friend," the wholesaler, should not overlook the point that on dimension more than on any other item the Ontario market is, and will be for a good many years to come, strictly competitive. If any of the western mills had been hopeful enough to pile up a stock of one-quarter scant dimension with the idea of selling it in Ontario at prices anything like those obtained during the past summer they would certainly be "out of luck." At the present time southern yellow pine has the field by a margin of about $10.00 per M. over fir, and Ontario hemlock seems more inclined to again enter the contest.

So far as sizes are concerned, while the one-quarter scant is visited on in a good many cases it should not require very long to establish coast sizes with the majority of the Ontario dealers. The strength is there, which is the main thing, and already a large number of the retail yards do not see the force of paying the additional $4 or $5 per M. for one-quarter scant usually asked by the mills. Changed sizes usually meet with considerable opposition at the start.

You will remember the opposition of a few years ago to fir flooring finished ¾ x 3¼ face as against the Ontario size, 13/16 x 3½ face. Now that every one has grown accustomed to fir flooring an objection on account of size is rare. When fir dimension a few years from now becomes firmly established in Ontario it will not be necessary for the B. C. millman to manufacture specially for the Ontario market. He will then be able to ship from the same pile to either Winnipeg or Toronto, even as he does now in a good number of cases.

Respectfully yours,

Toronto, Ont. C. J. Brooks.

What Timber Wealth Means to Canada

"As a filler of pay envelopes and a provider of jobs, the forests of Quebec and Ontario are worth all the Cobalts and Porcupines ever uncovered, or likely to be uncovered between now and Doomsday," declared Robson Black of Ottawa, Secretary of the Canadian Forestry Association, in a terse and logical address before the Kiwanis Club in Toronto, recently.

Mr. Black made clear that the management of public-owned forests on a basis of permanent production called for most liberal and intelligent participation by the Provincial Governments. This was true if for no other reason than that all restrictive measures aimed to produce forest conservation were necessarily costly to the operator. It would be quite unfair to expect individual operators to apply to their own areas a patchy system of timber cutting and reforestation, unless similar regulations were made to fit their fellow limit-holders and rivals in the same markets.

The speaker combatted the idea that the immediate duty of the Governments is to compel limit holders to replant on land that has been cut over. Before any general scheme of replanting must come a "fire-proof forest." "Why," asked Mr. Black, "expend vast sums in spading into the ground millions of seedlings when next week they will likely be swept by fire and ruined, or when a few miles distant a hundred miles of mature timber that required a hundred years to grow is swept away by a conflagration?"

The speaker mentioned the opportunities provided by the forest lands of Canada for creating a great store of national wealth. Of habitable Canada, more than 80 per cent. is non-agricultural. Of Quebec's 250,000,000 acres, exclusive of Ungava, less than 9,000,000 acres have been put under farms and the great bulk of the remaining area is fixed forever as timber growing soil. Ontario had more than two-thirds of her domain unfit for farm crops, and in the provinces of New Brunswick and Nova Scotia fully 70 per cent. was established for all time to come as the habitat of timber trees. Obviously, if the greater part of these non-agricultural areas were covered with heavy stands of trees to-day, not only could Canada maintain its present chain of industries for all time to come, but a powerful magnet would be provided for hundreds of new industries.

Canadians had to face the fact that about two-thirds of the inheritance of timber has been transmuted into smoke and charcoal, causing a greater loss since Conferderation than all other forms of fires combined. To-day it was disputable whether in Ontario and Quebec there existed much more timber than would maintain the present industries permanently. Even this limited position of security was gravely threatened by the ceaseless record of forest conflagrations, so that sober and well-informed Canadians had come to regard the stopping of forest fires as probably the supreme issue facing the people and governments of Eastern Canada at the present time.

Duty on Maple Lumber Shipped From Canada

Members will recall that in January of 1920, says W. W. Schupner, secretary of the National Wholesale Lumber Dealers' Association, New York, we issued a bulletin covering a ruling by the United States Treasury Department imposing a duty of 10 per cent. ad valorem on maple lumber imported to the United States from Canada. Paragraph 169 of the Tariff Act of 1913 imposes a 10 per cent. duty on "cabinet wood," and the Treasury Department has classified maple as a cabinet wood, except when manufactured into flooring or when invoiced at $10 per thousand. The Treasury Department ruled that the scarcity of other cabinet woods justifies the classification of maple as a "cabinet wood."

Since that time some protests have been filed and the board of general appraisers by ruling No. 43873 on protest No. 933672, etc., of W. H. Allison & Company and others has ruled that on the record presented maple lumber was held free of duty.

The Treasury Department will probably appeal from this ruling, which puts maple in the free class, and in the meantime the department will levy a duty on maple shipments coming into the United States from Canada, taking the position that if maple is finally declared free claims must be filed by protestants for duties to be refunded.

We are also informed that the Treasury Department has classified beech as a "cabinet wood," and will levy a duty on shipments of beech from Canada to the United States on the same basis as duties are collected on maple.

The Treasury Department has sixty days within which to appeal from the board of appraisers' ruling.

Protecting Forest From Fires Comes First

Speaking recently in Hamilton, Ont., before the Hamilton Scientific Association, Dr. C. D. Howe, Dean of the Faculty of Forestry, University of Toronto, pointed out that there is at the present time only 40 per cent. of the total land area of Canada that is capable of bearing trees of a commercial size. This is due either to the climate being too dry, too cold, or the altitude being too high. The total area of forest land is 1,900,000 square miles, and only one-half of this is capable of bearing trees of the "saw-log" type, that is, the trunks being 12 inches in diameter. The remaining area bears only small trees that can be commercialized only as the post and pole size of lumber or turned into pulp. The speaker stated that one-half of the area that had borne logs in the past had been destroyed by fire. He went on to say, however, that district, that had been swept by forest fires in the past almost invariably produced trees of the "saw log" size.

"There is no use in talking of forestry until we have better protection against fire, which is the greatest enemy that the lumber industry has at the present time," stated the speaker.

American Lumber Production in 1920

January—for the greater part of 1920 the sawmills in the several larger producing regions cut slightly more lumber than was shipped. Shipments exceeded the cut during January, February, and March which formed part of a period of unprecedented demand in the lumber industry due to a combination of depleted stocks, a stringent car shortage, and great activity in building and manufacturing. Demand lightened in April, and from then on until the last week of the year the output of the mills each week was greater than the quantity of lumber shipped. In June the excess reached a peak of 40 per cent; the weekly average, however, was not great and the year closed with the mills having stocks of practically normal proportions.

Canada's Trade in Lumber Business

What Dominion Exports and Imports in the Way of Forest Products—Record of Past Eight Years

W. E. Bigwood of Toronto, chairman of the committee on trade relations, presented an instructive report to the Wholesale Lumber Dealers' Association, Inc., at the recent annual meeting in Toronto. One of the features of the report was a statement of the imports and exports of lumber and lumber products from Canada to the United States and imports from the United States to Canada. These figures will be read with particular interest at this juncture, in view of the agitation in certain circles across the border to subject lumber from the Dominion to a levy in the way of a tariff.

Mr. Bigwood in his report said: The after war condition has been in evidence but until the last month or two of the year good business controlled. December especially gave marked indications of the re-adjustment of industrial products and lumber by no means escaped.

At this time it might be well to mention the appearance in the horizon of a cloud that daily is taking on ominous shape. We refer to a suggested Tariff Bill in the United States as soon as the new Administration assumes its duties in March.

The war debt is stupendous, taxes are high, the whole industrial situation seems to be more or less chaotic and the time seems ripe for the advent of almost any kind of legislation that will provide income.

For the information of the members we have proposed a condensed statement of the lumber business, as to imports and exports in the United States.

At the present time, and for some time past, there has been no duty on lumber from the States into Canada. Since 1913 there has been no duty on lumber going from Canada into the States. In 1914 there went into the United States from Canada 617,000,000 feet and from the United States into Canada 627,000,000 feet.

While it is true that since 1915 the epxorts from Canada have exceeded imports from the States, this is largely accounted for by the excessive demands for lumber in the States.

U.S. Operators Unable to Meet Demand

For the last three years United States operators have not been able to supply the demand, so that the Canadian lumber has merely filled in the gaps.

During 1919 more lumber was exported from the United States than was imported from all countries, and with the exception of 1918 this was true for the past eight years.

The following statement shows the exports of lumber and lumber products from the United States to Canada, as compared with the total exports to all countries:

	To Canada	To all Countries
1912	685,293,000 Ft.	2,435,641,000 Ft.
1913	789,153,000 "	2,837,136,000 "
1914	627,019,000 "	2,612,403,000 "
1915	275,106,000 "	1,254,503,000 "
1916	214,756,000 "	1,325,921,000 "
1917	To be obtained	To be obtained
1918	276,350,000 Ft.	1,139,291,000 Ft.
1919	264,320,000 "	1,474,719,000 "

Estimates include ties.

The Statement of lumber going into the United States is:

	From Canada	From all Countries
1912	870,323,000 Ft.	905,152,000 Ft.
1913	1,021,810,000 "	1,090,628,000 "
1914	892,575,000 "	924,567,000 "
1915	908,614,000 "	929,006,000 "
1916	1,179,976,000 "	1,200,077,000 "
1917	.....	.....
1918	1,183,015,000 "	1,206,027,000 "
1919	1,119,244,000 "	1,144,187,000 "

1912 & 1913 Entire footage dutiable.

1914 617,832,000 Ft. free of duty from Canada, and 643,352,000 Ft. free of duty from all countries.

All importations from 1915 and subsequent years free of duty.

It seems to be the current opinion that the present Emergency Tariff Bill, now before the United States House, will not include lumber, but upon the advent of the new government next March a complete new Tariff Bill will be one of the first measures to receive attention and it is strongly hinted that a most drastic duty will be imposed some suggesting from 20 to 25%.

Parties, pro and con, are even now marshalling their forces and the most pronounced campaign will be carried on. It behooves us to do all we can to assist our friends across the line who favor no Tariff against Canada on lumber.

Wide Survey of Timber Operations

The Labor Gazette of Ottawa in its last edition gives an interesting survey of lumber operations from coast to coast as follows:

At Charlottetown employment in the woods increased owing to the snowfall. St. John reported the saw and shingle mills quiet. At Fredericton a considerable number of men were employed in the woods but a short logging season was anticipated. Bathurst reported increased activity following heavy snowfall. Sherbrooke reported fair activity in the lumber tie and pole camps in the Province of Quebec. The sawmills at Sorel were active. Ottawa and Hull reported considerable activity in the woods in Ontario and Quebec, but most of the sawmills were closed down. Peterborough reported activity in the woods below normal, few hiring the usual number of men; this condition was attributed to uncertain market conditions. Camps in Owen Sound district were fairly busy, and sawmills were active. Sault Ste. Marie reported lumbering operations as somewhat hampered by deep snow which fell towards the close of the month; additional men were taken on, experienced bushmen being in some demand. At Port Arthur and Fort William a strong demand was noted for experienced bushmen, tie-makers, pulpwood cutters and monthly men; most of the work this year was said to be carried on under piece-work conditions. Winnipeg and Regina reported bush work rather quiet in northen Manitoba and Saskatchewan but there was some demand for experienced bushmen. Edmonton reported bush work rather quiet in northern Alberta, the cut this year being estimated at only about half the normal amount. At Fernie conditions in the lumbering industry were said to show some improvement over the previous month, due to large orders for railway ties and to woodmen excepting a marked reduction in wages; it was expected that many sawmills would re-open early in the new year; during December, however, the only mill in the district working to any extent was at Yahk, where between 700 and 800 men were employed at the company mills; at Wattsburg, between 100 and 200 men were employed in the camps; many sawmills continued to shut down, the largest companies in Fernie district being likely to remain closed all winter. Nelson reported a complete cessation of work at the sawmills early in the month; a small demand was noted later for the woods. At New Westminster the lumber mills were still quiet, one mill being shut down and the others not working to full capacity. Vancouver reported continued depression in the lumbering industry. Similar conditions were noted at Prince Rupert, the only activity being in the camps. Victoria and Nanaimo reported very dull conditions in lumbering on Vancauver Island, practically all mills ceasing operations.

Pulpwood Camp in Deplorable Condition

That the sanitary conditions in many of the lumber camps in the province are simply appalling, was the statement made in Quebec city a few days ago by Dr. C. R. Paquin, chief city medical officer, who returned from an inspection of lumber camps north of Lake Beauport, on behalf of the Superior Board of Health.

The camps in question are situated less than twenty miles north of Quebec and are operated for a company cutting pulpwood.

Dr. Paquin said the camps were not fit for human beings. They were too small, badly ventilated and badly lighted. There were no beds or bunks, but the men slept on the floor on boughs.

In one camp, he said, the found men and horses all housed together. There was no partition; the horses and men fed and slept in the same apartment.

The complaints regarding these camps stated that there was considerable illness amongst the men. Dr. Paquin found that nine men had been stricken with influenza in a mild form. Six of them had recovered and were at work again, but three were still ill.

The company for which this camp is operated will be notified. Dr. Paquin said, to improve conditions.

Twelve Million Roofs in United States

In the report of the recent proceedings of the Canadian Lumbermen's Association in Ottawa, when the discussion on the durability, convenience and service of the wooden shingle was taken up, it was stated that Mr. George H. Holt of Chicago, had said that there were twelve billion roofs in the United States. This was manifestly a typographical error and should have read "twelve million." These are the figures used by the U. S. fire insurance experts in calculating fire losses. Some other authorities increase the number to eighteen million.

Among the callers on the trade in Toronto during the past few days were R. D. Messier of Montreal and Bower Bain, of Cache Bay, Ontario.

Personal Paragraphs of Interest

L. L. Evans has been appointed chairman of the Lumber Committee of the Montreal Purchasing Agents' Associations.

Alex. Lamont, of the C. G. Anderson Lumber Co., Toronto, was recently appointed a member of the Board of Health of Weston, Ont.

F. C. McGonigle passed away recently at his home in Port Arthur after an illness of several weeks. He was office manager for James Stewart & Co., timber contractors, and leaves a wife and two children.

Hugh A. Rose, of Rose-McLaurin, Limited, Toronto, has returned from an extended business trip throughout the Maritime provinces and reports that with the advent of spring, trade in general down east is showing considerable evidence of improvement.

Among those who attended the recent annual convention of the New York State Retail Lumber Dealers' Association at Utica, N.Y., were W. A. Filion of Montreal; Gordon C. Edwards, Ottawa; Sam Thompson, Ottawa; Robert Savage, Ottawa; D. C. Johnston and F. H. Horning of Toronto; George Coyles and A. R. Lowe, Ottawa.

J. R. Carter, of the Fesserton Timber Co., Toronto, while driving his Nash car on King St. West, recently, was run into by a swift-moving street car proceeding in the same direction. The trolley car caught the hind wheel of the automobile and carried the latter partially across the track and back. The result was that Mr. Carter had his car badly damaged and narrowly escaped serious injury himself.

J. S. Emerson, one of the best known lumbermen and financiers of British Columbia, died recently in Vancouver. Sixty-three years of age, Mr. Emerson had been in indifferent health for about a year. Mr. Emerson was born in Ireland, spent his early life in the United States and twenty years ago came to Vancouver from Bellingham. For some time he was the largest figure in the logging industry of British Columbia. He built the Thurston-Flavelle mill at Port Moody, and also constructed a big sawmilling plant at Prince Rupert. He leaves an estate of very considerable value. Besides Mrs. Emerson, there are a son and daughter.

Many members of the Ontario Retail Lumber Dealers' Association who took in the annual excursion last summer to North Bay, Cache Bay and Sturgeon Falls, Ont., will regret to learn of the death of A. Kavanaugh, superintendent of the Spanish Pulp & Paper Mills Division at Sturgeon Falls. Mr. Kavanaugh had been in the service of the company for many years and was particularly attentive to the visiting lumbermen during their stay in the progressive northern town. He presided at the banquet tendered in their honor and through his interest and activity an evergreen arch was erected at the entrance to the company's mills, and many other evidences of welcome accorded the delegates.

Robert Dixon, lumber and coal merchant, of Grand Valley, Ont., died on February 5th at his home in that town. He was born on the old Dixon homestead in East Luther Township, just north of Grand Valley, where his father, Wm. Dixon, was one of the early pioneers, clearing a farm in the dense forest. Later the deceased removed to Grand Valley, where he worked up a splendid business. He had been in poor health recently, but his death was entirely unexpected. Mr. Dixon was 59 years of age and was one of the most active and enthusiastic members of the Orangeville Division of the Ontario Retail Lumber Dealers' Association, as well as of the provincial body. He was always present at every meeting and took a leading part in the proceedings. Many friends in the lumber industry will deeply deplore the passing of this kindly and courteous gentleman.

Costs Still High in Logging Line

Writing to the "Canada Lumberman," James Ludgate manager of the Schroeder Mills & Timber Co., Pakesley Station, Ont., under date of February 1st, said their work in the woods then was going along fairly well. Frost was the greatest shortage. One of the dumps of the company was on a river where the current kept cutting the ice underneath about as fast as the company could make it on top, but otherwise weather conditions were good.

Continuing, Mr. Ludgate said: "Rain seldom does harm in the winter. Of course, it freezes the logs on the skidways pretty hard, but it keeps down the snow and makes the swamps good. Up to date costs are higher than ever. Wages were very high in the fall and labor very poor. Lumbermen will have to hold up prices in order to come out even, and if there is any great slump, they will surely stand to lose considerable money. We will not get out as much timber as last year because of the scarcity of labor in the early part of the season."

The Schroeder Mills & Timber Co. expect to cut more lumber at their mill at Pakesley this season than last. They are installing a twin circular to slab the logs and also a Kendall gang to cut up the cants. The resaw will take care of the slabs so that the company believe that they will more than double their cut during 1921. They are also enlarging their piling ground at Pakesley and intend installing an electric plant for lighting purposes. The company do some farming at Pakesley Station. Last year they grew over 1,000 bags of potatoes and other vegetables, and they are thinking of starting other activities.

John Fraser, who was mill foreman last season, will take charge of the lath mill during the coming year, and Mr. Armstrong, late of Brennan Harbor, takes his place as mill foreman. James Ruxton, an old bush superintendent, who was with the company for years, left lately, and Wm. Spence, late foreman of Camp 5, has succeeded him.

Mr. Merkel, vice-president of the Schroeder Mills & Timber Co., paid the Canadian headquarters a short visit recently and was well pleased with the progress of operations. He stated that conditions appeared to be much better in the lumber line in Canada than in the Western States.

Not Fair to the Wooden Shingle

Editor, Canada Lumberman:—

Are you aware that in every school in the Dominion of Canada our children are being taught that it takes one M of shingles to cover one square? See page 118 Public School Arithmetic. Note (shingles are sold by the thousand. A thousand shingles are supposed to cover one square of roof. a square being one hundred feet. Think of the thousands of young men coming out of our schools every year with the above teaching.

In every hardware store wherever patent roofing is being sold, a thousand shingles are being compared with a square. Is it fair to the wooden shingles? Why should they be handicapped? Is it because the poor manufacturers at the Coast will be put to all the extra expense of cutting one inch off the metal bands, or is it because a few of our city retailers wish to buy by the thousand and sell the "short three bunch square?"

I have handled nothing but the square pack since they were introduced and have had good success. I buy from the Vancouver Lumber Co. and have shipped shingles into the city of Hamilton forty miles away because my square contains twenty-six coarses more than the city square. Yours for the Square Pack,

Simcoe, Ont. W. R. Cutting.

Fraser Companies Open Madawaska Inn

The Fraser Companies, Ltd., of Edmundston, N.B., have recently erected and opened premises, to be known as the Madawaska Inn, at Edmundston, N.B., which is for the benefit of their employees.

The building is beautifully situated, overlooking the Madawaska River, and consists of 45 bedrooms, 4 complete bathrooms and washrooms in basement. There are steel fire escapes at each end of the building, with electric light throughout, the power being supplied from the company's power house. An electric bell system is connected from all the rooms to the office of the Inn. The stairways, halls, dining room and kitchen are laid with hardwood flooring, and the walls are finished with rock wall plaster, protected with burlap up to 4 feet. The dimensions of the Madawaska Inn, which is four and a half storeys high, are 80 x 35 feet. There is a modern dairy barn, 100 ft. long and 36 ft. wide, and a dairy house 45 x 25 ft. with foundations and floors in concrete. The latter building is fitted with forty steel stalls, supplied by the Lowden Machinery Co. The dairy herd consists of pure bred Holsteins. The company are supplying all their employees with milk, delivered to their houses.

New Mill Will Cut Million Feet Daily

The purchase of 2,500 acres of land near Kelso, Cowlitz County, Washington, has been announcel by The Long-Bell Lumber Company, of Kansas City, and will be the site of a sawmill of one million feet daily capacity.

It is probable that the new mill will be electrically driven. Construction work, it is planned, will begin within a short time. Some preliminary work will be necessary, including the erection of a bridge over the Cowlitz River.

One advantage of the site chosen is the deep water transportation available. Ships bound for export or for coastwise trade may load at the plant. Besides, three transcontinental railroad lines are easily accessible.

Plans for the erection of this mill follow the recent purchase by the Long-Bell Company of 60,000 acres of timber land. It is probable that the construction of a mill on the site chosen will require the building of a town. Other improvements will necessarily follow in time.

Prominent Lumberman Joins Silent Majority

The late James G. Cane, Toronto

James Gilbert Cane, wholesale lumberman, passed away in the Toronto General Hospital on Sunday, February 6th, after a week's illness. He had not been in the best of health for some time. It will be remembered that, while attending the annual convention of the Canadian Lumbermen's Association in Quebec in February, 1920, the sleigh in which he was riding, upset while going up Palais Hill and all the occupants were thrown out. Mr. Cane sustained a broken shoulder bone and received a severe shaking up, from the effects of which he never fully recovered. A few days before his death he was operated upon for peritonitis and was unable to survive the strain.

In the passing of James G. Cane, one of the most widely-known and best-liked lumbermen in Canada has been called home. He was born in 1864 near the village of Weston, where his father, the late Martin Cane, operated the first sawmill in the vicinity of Toronto, being manager of the plant of Edward Scarlett, which he subsequently purchased.

Educated in the public and high schools at Weston, Mr. Cane started at an early age to work for his father. After learning a good deal about the manufacturing in this way he went into the planing mill business and secured an insight into it for several years. His next move was embarking in the wholesale lumber sphere as a salesman for the Hargreaves Lumber Co. of Toronto, and later he occupied a similar position with the firm of McCool, Boyle & Wilson of Toronto. Subsequently Mr. Cane joined the old Toronto Wood & Shingle Co., and after being with them for some time, felt justified in embarking in the wholesale lumber line for himself, which he did in 1894 under the name of James G. Cane & Co. They have offices in the Stair Building, corner Bay and Adelaide Sts., Toronto, and have specialized in softwoods.

Mr. Cane was a director of the Canadian Lumbermen's Association and at the 1920 meeting, held in Quebec, was re-elected for three years, heading the list in a large number of nominees. He was also a member of the Wholesale Lumber Dealers' Association, Toronto, and attended the last convention of the C. L. A. in Ottawa. He was enthusiastic in anything that he undertook, and the C. L. A. owes much of its strength and influence to his active support and interest.

Outside of the lumber arena, Mr. Cane was a past president of the Commercial Travellers' Association, and at the annual meeting, held recently in Toronto, was re-elected a member of the Board of Directors. The subject of this reference was also prominent in politics and fraternal circles and twice contested the riding of North Toronto as a Liberal standard-bearer in bye-elections against Hon. W. D. McPherson and Hon. Thomas Crawford. Fraternal associations also had a large place in the life of the deceased, who was Past Grand Junior Warden of the Grand Lodge of Canada, A.F. & A.M., Past Master of Zeta Lodge, A.F. & A.M., a member of Mount Sinai Chapter, R.A.M., and a member of the Caledonia Society. Mr. Cane also represented the Commercial Travellers' Association on the National Exhibition Board, and was one of the oldest members of the Caer Howell Lawn Bowling Association.

Mr. Cane was prominent in military circles, having fought with the 10th Royal Grenadiers during the Northwest Rebellion in 1885. He was wounded at the battle of Fish Creek and was represented in the late European war by three sons, two of whom were wounded. Mr. Cane is survived by his wife and nine children, all of them in Toronto. The sons are James M., William E., Chas M., and Gordon G. In religion Mr. Cane was a Presbyterian, being a member of Chalmers Presbyterian Church.

Ross-Saskatoon Operation Outlined

A. B. Davis, sales manager of the Ross-Saskatoon Lumber Co., Waldo, B.C., is spending his vacation in Portland, visiting with his parents, Mr. and Mrs. W. G. Davis, says "The Timberman. The mill cut 15,000,000 feet in 1920 and hopes to cut 20,000,000 this year. The mill is located on the C. P. R. and Great Northern roads. Mr. Davis says the Canadian Pacific takes excellent care of the mills on its line, and generally manages to find enough cars to keep the mills going. Shipments over the Great Northern take a rate of 2 cents higher than over the C. P. R. Mr. Davis has just returned from a trip into eastern Canada, where he finds the conditions are favorable for a fairly good demand early in the spring. The mills in the Crow's Nest have some business on hand, and orders for dimension on a basis of $23 have been turned down. The Ross-Saskatoon Co. has an order to cut 150,000 ties by July 1. An effort will be made to secure an export trade to Vancouver on a basis of probably 30 cents, in order that shipments of B. C. pine may find their way into the export trade of Australia and New Zealand. There has been some exports to Great Britain via Halifax on a basis of $1.10 per hundred pounds. Logging will be a little lighter this winter than last year, and summer logging will be pushed pretty energetically if business demands. At the present time southern pine is a pretty strong competitor in Hamilton, Toronto and London with British Columbia timber.

The Canadian railroads made advances of 35 and 40 per cent. last year in freights. A reduction of 5 per cent. to Canadian points was made effective on January 1. Another reduction of 5 per cent. is scheduled for July. Mr. Davis says the preliminary tariff issued, however, did not reflect a 5 per cent. reduction from the Crow's Nest Pass to Calgary, but apparently the reduction favored points farther east. Rates on lumber from Canada, entering the United States, are based on the American rate.

National Association Will Meet in Chicago

Gordon C. Edwards, of Ottawa, and A. E. Clark, of Toronto, who are trustees of the National Wholesale Lumber Dealers' Association, attended the recent executive meeting of the Board in New York City.

One of the most important matters discussed was the selection of the time and place for holding the 29th Annual Meeting. Strong invitations were received from many cities, including St. Louis, Mo., Cincinnati, O., Chicago, Ill., Richmond, Va., Buffalo, N.Y., New York City and Atlantic City, N.J., and the trustees finally concluded it to be in the interest of the association to hold the meeting at Chicago, Ill., the latter part of March. The membership of the association has reached its pinnacle of 529 and is growing toward the west and central west to such proportions that the trustees recognize the desirability of selecting a place which would appeal to this contingent.

A. L. Stone, chairman of the Board of Managers of the Bureau of Information, reported on its investigations among the members with a view of obtaining information of assistance in securing the enactment of legislation clarifying the guarantee clause of the Railroad Act. Many members of the association have vast sums tied up because of a ruling of the Comptroller of the Treasury preventing partial payments to railroads who are not in a position to file their final accounting and who urgently need funds to meet current obligations. Hundreds of thousands of dollars are due members of the association, and the Bureau of Information is co-operating with others in an effort to obtain early payment of these needed funds.

J. Randall Williams, Jr., Philadelphia, chairman of the Committee on Forestry, submitted a lengthy report on the question of national forest policy. The association has joined with others in requesting the Chamber of Commerce of the United States to issue a referendum to its members on this broad question, and an appropriation has been made to assist the National Forest Policy Programme Committee in its propaganda.

Some Suggestions For Shingled Roof

F. A. W. Taylor, 50 Bloomfield Ave., Toronto, in writing on the anti-wooden shingle legislation in Ontario, says: I should like to point out that, if iron is used as suggested by many, it will prove a retrograde step, as any metallic construction is a conductor of heat and cold, and naturally houses clothed in such material would make houses hotter in summer and colder in winter. Surely a fireproof paint could be evolved and enforced or the shingles immersed in some fireproof mixture which could increase their life. Failing this, asbestos mixed with cement in either corrugated or flat (shaped in any design) would be highly efficient, and will take paint if necessary, is easily manipulated and can be sawn to fit.

If Both Could Clearly See

"If I knew you and you knew me,
If both of us could clearly see,
And with an inner sight divine
The meaning of your heart and mine,
I'm sure that we would differ less
And clasp our hands in friendliness;
Our thoughts would pleasantly agree
If I know you and you knew me."

Forest Products Laboratories Reorganize

Canadian lumbermen and wood-users should be glad to hear of the improvement in facilities for research into wood which has been made possible by the reorganization of the Forest Products Laboratories of Canada in Montreal. These laboratories have suffered from the sudden recognition of the need for technical men by the pulp and paper industry, which in its present ultra-prosperous condition is easily able to entice men from the Government service.

During the past few months, however, the process of reorganization has proceeded rapidly, a number of appointments being rendered possible through the recognition by the Civil Service Commission of the necessity for higher salaries for technically trained men and by the allotting of increased remuneration to a number of technical positions in the laboratories.

The position of superintendent has been filled by the appointment of Mr. William Kynoch, whose experience in forestry and wood

William Kynoch, Montreal
Newly-appointed Superintendent of Forest Products Laboratories of Canada

technology should be of value to the lumber and wood-using industries. Chiefs have been found for three divisions, viz., Timber Physics, Wood Preservation and Timber Tests, and the staff of the latter division has been increased. It must be remembered, however, that the division of Timber Tests has, without intermission, carried on its programme of testing for strength, hardness, etc., all the commercial species of Canadian woods. In all, six new technical men have been added to the staff and two other appointments are pending and may be made soon. The branch laboratory at Vancouver, which was established and equipped for the purpose of testing western woods, has also been reorganized and is continuing the work for which it was founded.

With this reorganization of the laboratories the industries interested in lumber should receive improved technical service, and the solution of many problems connected with the proper utilization of Canadian woods may be confidently anticipated.

Gatineau Company Now in Control

The Gatineau Company, Limited, which is owned and operated by Riordon Company, Limited, has formally taken over the business carried on by W. C. Edwards & Company, Limited, at its New Edinburgh mills, Ottawa. Mr. Carl Riordon, president of the company; Mr. F. B. Whittet, accountant, and Mr. V. Drury, of the Royal Securities Company, Montreal, were in Ottawa lately attending to the final details of the transfer, which aroused no small interest when the gigantic $60,000,000 merger of the vast pulpwood and timber holding and other properties of the W. C. Edwards & Company, Limited, and Gilmour & Hughson, Limited, with the Riordon Pulp and Paper Company, Limited, was consummated last May. The value of the Gilmour & Hughson, Limited, property, approximates $3,500,000, and that of W. C. Edwards & Company, Limited, more than $8,000,000.

Most of the office staff and other employees of the W. C. Edwards Company at New Edinburgh will continue in the employ of the Gatineau Company, Limited, of which Mr. Sam Thompson, former sales manager of W. C. Edwards & Company, Limited, will be manager.

The W. C. Edwards & Company, Limited, which also owns Watson & Todd, will continue in the wholesale lumber business, and will still be identified with several large manufacturing lumber concerns. Its new office, however, will be in the Rideau Club Building, Ottawa, and its capitalization is $4,000,000. The following are owners and directors: Messrs. W. W. Humphries, E. R. Bremner, N. F. Wilson, Col. C. M. Edwards. John A. Cameron, and Gordon C. Edwards.

The business of W. C. Edwards & Co., Limited, was established at Rockland, in November. 1868. It was originally a co-partnership and was afterwards merged into a joint stock company. The original co-partnership was composed of William C. Edwards and James Wood, but John A. Cameron and John C. Edwards became partners of the firm in 1871. In 1895 the limits of James MacLaren & Company, on the Gatineau and Temiskaminque, were acquired along with the mill property at New Edinburgh, which has been operated until now.

New Transportation Committee Appointed

The Transportation Committee of the Canadian Lumbermen's Association for the coming year is composed of A. E. Clark, chairman, Toronto; E. R. Bremner (Watson & Todd), Ottawa; Arthur D. Huff (Riordon Co.),Montreal; J. W. Smith (Colonial Lumber Co.), Pembroke; E. A. Dunlop (Pembroke Lumber Co.), Pembroke; and E. C. Barre (Cleveland -Sarnia Sawmills Co.), Sarnia.

This committee has been delegated the authority to complete the details in connection with the establishment of a transportation bureau for the Canadian Lumbermen's Association, as decided upon at the last annual meeting and to engage a traffic manager for the organization. It is expected that a meeting will be held in Ottawa within a few days to consider further this important project.

A number of the members of the committte are former railway men, and all are familiar with transportation problems.

Too Much One Sided an Arrangement

Sir George E. Foster is always pleasing and happy in his public addresses. He can also be gentle, yet incisive when it comes to pointing the way which others should follow. Recently the Canadian Minister of Trade and Commerce spoke in New York City, during which he took occasion to point out a few plain facts to our neighbors across the border. He declared that, during the past year, Canadians had bought from the United States $921,000,000 worth of goods. This meant that every man, woman and child in Canada spent on an average $115.00 in purchasing from the United States. The latter country had purchased from the Dominion only $560,000,000 worth, which was exactly $5.00 for every man, woman and child in the United States. "Then," declared Sir George, "let us be neighbors. Buy as much from us as we do from you, and when we come down here with our goodwill security Canadian dollars, be above offering us 88c."

Open New Office in Vancouver

The Main Belting Company, Limited, 10 St. Peter Street, Montreal, makers of the Leviathan and Anaconda belts, are opening an office in Vancouver, B.C., in charge of Mr. E. F. Vincent. The company was until recently represented in Vancouver by the Taylor Engineering Company, but as the agreement has ceased, the Main Belting Company have decided to open a permanent branch. A large stock of belts in all sizes, with fasteners and other supplies, will be carried, and the company will give the same service to customers as is given at the head office in Montreal and at the branches in Toronto, Winnipeg, Edmonton and Calgary.

Increase in Commercial Values of Sawdust

Sawdust as a waste product is a thing of the past for it now serves many purposes and has an ever-increasing commercial value, says a recent despatch from Chicago. Mixed with clay it makes good tiles and bricks and combined with concrete a good flooring material is obtained. It also finds a place in the dye industry for coloring purposes. A gas excellent both for lighting and heating purposes, can be made from sawdust. It is believed that, particularly in the neighborhood of sawmills, the gas could be produced so cheaply as to be supplied for a few cents per thousand feet.

The deficit on the Government railway system, now controlling all Canadian roads but the C. P. R., was estimated recently by a leading authority at eighty millions for the year 1919. Ominous notice of an even greater deficit for 1920 already has been given at Ottawa. The trend of things sounds an alarm in every Canadian home. The whole bright promise of the future may be blasted in a railway wreck. The almost priceless natural resources of the country may be consumed to no purpose.

Lowly Jack Pine is No Longer Despised Tree

For Years the Weakling of the Timber Breed It has Emerged into Sphere of Usefulness and Value in Paper Making—Its Powers of Reforestation

Who is Jack Pine? What is Jack Pine? Where is Jack Pine? asks Mr. T. K. Dickinson of Montreal.

From the investors' standpoint, from the pulp and paper producers' standpoint and from the national standpoint, Jack Pine is quite a big fellow in his own particular way.

For generations of tree life, jack pine has been a sort of poor relation. It has been the weakling of the timber breed. But henceforth it will be quite an important member of the forestry family. Hitherto, jack pine has had a very indifferent place in the assets of the producing companies; it has had practically no place at all in the active operations. It has been used for the extraction of certain chemical properties, for railway ties, and for kraft wrapping paper—not a big market as timber markets go. And there are scores of millions of cords of jack pine. The woods are full of them, so to speak.

Jack pine, alias Banksian, alias Cypress, in the past has been a stubborn and reluctant servant of the pulp and paper mill; so much so that the expert woodsmen and mill operators deliberately ignored it as a means towards the end of pulp and paper making. Operators occasionally, inadvertently or with aforethought, put jack pine into the stewing pot with the more respectable spruce and balsam, and always there was trouble—mostly pitch trouble. Jack pine, being a self-confessed culprit, was relegated again and again to the tall timbers.

Daily Dance of the Wood-chips

Jack pine, it will be observed, has had a very bad name, and as a consequence was not invited to the daily dance of the wood-chips, or the jamboree in the mill digesters. Now we find that jack pine is not at all the sort of chap we thought he was. He has been exclusive, that is all. He can go into the digester, unaccompanied, and come forth a one-hundred per cent. specimen of sulphite pulp, equal to the best composition requisite for the making of good and sturdy newsprint.

And this is the point: Most of the companies in which investors are interested have supplies of jack pine to the extent of 15 to 35 per cent. of their standing timber areas. Most of these companies, in appraising the value of their physical assets, write the jack pine timber at, perhaps, less than one-half the value placed upon the timbers ordinarily used for the manufacture of pulp and paper.

My information is to the effect that in the Abitibi and the Mattagami companies' areas, for instance, jack pine represents over 15 per cent. of the standing timber. Riordon, Price Bros., and North American Pulp run from 10 to 15 per cent. Brompton appears to have none. The St. Maurice River territory has 20 to 25 per cent. of jack pine, while this timber on the Spanish River properties predominates all other classes of standing pulpwood. In the Upper Ottawa district, there are some 20 million cords of pulpwood, with jack pine giving an additional 3 to 4 million cords.

Splendid Pulp From Jack Pine.

Thus, the available supplies of timber for newsprint production is some 15 to 25 per cent. greater than has been estimated by the companies operating the areas. To put it another way, it has been estimated that the province of Quebec has 155 million cords of paper-making timber. With the addition of jack pine the available resources will be increased to 185 million cords.

From experiments recently made, and successfully concluded by commercial as well as laboratory practice, the fibre from jack pine was found to be about 25 mm. longer than that of spruce fibre, which makes it particularly suitable for newsprint. The pulp made from jack pine proved to be as good as, if not better than, anything that can be purchased on the market.

It has long been an established fact that if jack pine is cooked in a mixture with other wood, trouble will result, owing to the fact that jack pine requires a stronger acid and a longer time for cooking than required for other woods.

It now is an established fact that jack pine, cooked alone, will make a newsprint product equal to the best that has been coming from the Canadian mills.

Therefore, it is possible for those companies which in the past have been compelled to leave large areas of standing jack pine and cut further and further afield from their mills, to begin afresh near the source of manufacture, with several seasons' run of the near-by product and thus reduce the average of the cost ratio by a very substantial and profitable margin. The clearing of those areas will also make available the shut-in balsam and spruce not economically workable in the past.

The Most Rapidly Growing Conifer.

The additional advantage in respect to jack pine as a newsprint producer, is in the fact that the tree grows more rapidly than any other conifer. As a rule it is peculiar to dry and sandy soil. Its powers of natural reforestation after fire, are greater than any other conifer. On the average, jack pine, attains twelve inches diameter, whilst a spruce grows six inches in the same period of growth. There are more cords per acre, on a given area of jack pine, than there would be even in black spruce, which probably has the speed record to date.

Incidentally, besides those companies already mentioned, Laurentide is high in jack pine holdings. The Provincial Mills and the Belgo Canadian have a high percentage of jack pine.

The causes which have kept this valuable timber from practical consideration are: a remarkable degree of ignorance; much prejudice; a modicum of laziness, and no doubt the fact that only too often is invention still-born when necessity has no need to function.

Clearly, the scientific and chemical resource which has brought jack pine within the scope of the paper-maker, has given to Canada's forests a renewed lease of life; while to investors has accrued an unexpected increment in the shape of increased physical assets, where a decrease might reasonably be expected through seasonable depletion of the reserves of what to date have been considered the only timbers suitable for paper production.

I am indebted to an article which appeared in a technical journal, from the pen of Mr. Frank Ritchie of the Wayagamack Pulp & Paper Co., which article prompted my investigation of the subject.

A Lowly Lumberjack

Come with me to yonder camps
And I will tell you why,
I am a lowly lumber jack,
At least, I'll surely try.

I am a lowly lumber jack
And like the lumber life,
Far away from crowded cities
With their vanity and strife.

I like to live out in the bush
And breathe the fresh ozone,
And listen to the lofty pines
That sway, and sigh, and moan.

I like to view the lofty spires,
As minarets of old
Inviting man to look above,
To yon celestial fold.

I like to live among the trees,
For they give life and health,
More worthy to be coveted
Than fleeting fame or wealth.

I like the snow-clad winter woods,
They give me vim and zest,
And I can lay me down at night
Close to nature's breast.

"There's a pleasure in the pathless woods"
To potentates unknown,
Who wade through bloody battle fields
Of slaughter to a throne.

There's a grandeur in the rugged wilds,
That no wealth ever gave,
And all the paths of power and pelf,
Lead but to the grave.

—Holmes

Public Spirited Eastern Lumberman

Alfred S. Gravel
Etchemin Bridge, Que.

Alfred Samuel Gravel, who is vice-president and managing director of the Gravel Lumber Co., Etchemin Bridge, Que., is widely known in the lumber industry in the sister province where his firm are large manufacturers of dressed lumber and box shooks.

Mr. Gravel was born in Montreal in 1862 and after receiving his education at the Plateau Academy, Montreal, joined the staff of Matthews & Hickok, Burlington, Vt., with whom he remained two years. He travelled in the Southern States and was later inspector for the Export Lumber Co. at their Greenpoint yard in Brooklyn, N.Y. He became accountant with the A. Gravel Lumber Co., Limited, in 1885 and four years later was promoted to the vice-presidency and managing directorship, which post has necessitated numerous trips to Great Britain and much travelling throughout Canada and the United States.

Mr. Gravel is a member of the Canadian Manufacturers' Association and the Canadian Lumbermen's Association. He was appointed Harbour Commissioner of the Port of Quebec eight years ago when Sir Wm. Price was chairman, and since that date has been twice reappointed, Sir David Watson now being chairman of the present commission.

Mr. Gravel, who is fond of motoring and yachting, is a member of the Garrison Club of Quebec and of the Knights of Columbus. In 1883 he married Miss Flora Dessault, daughter of Stephen Dessault, and has three sons and one daughter.

Getting Rid of Water in Payrolls

The Birmingham News commenting on the commercial conditions ediorially has something to say that will no doubt interest every operator in the South who recognizes the conditions as put forth in this article: Water in Payrolls as Well as in Stock; Big Lumber Company Makes Experiment.

In order to meet depressing conditions in the lumber market, the Great Southern Lumber Company a Bogalusa, La., concluded to reduce its working force, and accordingly discharged 300 men, aggregate, by a "weeding out process." Only the best workers were retained, and the slackers, the clock watchers and the fellows whose ambitions were merely to "get by" were dispensed with.

The startling fact has now been developed that, notwithstanding such a considerable reduction in force, the output of the plant was increased 50,000 feet per day by those who remained on the job; and lowered production cost of from $10 to $12 per thousand feet was the result by clearing off the rolls.

It is an interesting demonstration of the fact that in the past year there has been much half-hearted work, and apparently the desire to do a full day's work has not generally actuated those who were employed. Several large employers about Birmingham claimed months ago that labor was only about 70 per cent. as efficient as before the war, and notably, this claim was made by an official of the Gulf States Seel Company.

Conditions are rapidly getting back to the normal state of competition where employers, no matter be they executives, an office worker or a day laborer, must deliver full measure of service for remuneration. If they are not willing to do this, there are plenty who are. Corporations have been accused by some of having a good deal of "water" in their stock; but it seems that there can be "water" in the payrolls as well.

Forest Inexhaustibility is Pure Myth

The inexhaustibility of Canada's forest resources is a myth which is rapidly losing credit, according to a statement issued by the Commission of Conservation. The symptoms of an actual timber shortage in eastern Canada are already being felt in the form of high prices. White pine is disappearing rapidly, and, for the most part, is not being replaced by new growth. Spruce is steadily giving way to less valuable species, such as balsam and the hardwoods. Each year preventable forest fires still levy an enormous toll upon forest wealth.

One symptom of the timber shortage, is the increasing pressure for a modification of the regulations which forbid the cutting of timber under a stated diameter, such as are in force on Crown lands in Quebec and New Brunswick. This diameter limit is, for spruce, 10 inches in Quebec and 12 inches in New Brunswick. In both Quebec and New Brunswick, provision has been made for the local modification of the diameter-limit regulations, but only after examination on the ground, and a favorable report by the Forest Service.

Unquestionably, there are conditions where even clear cutting may be the best form of management. Other cases exist, where a scientific modification of the diameter limit regulation will permit of the removal of a materially greater volume of timber than is possible, under a strict adherence to such a system and still leave the cutover area in a better position to produce a second crop of timber.

The future of Canadian forests depends upon the increased application of approved forestry methods to cutting operations, and the total or material abandonment of the existing restrictions. means a reversion to the system of unbridled forest devastation which has resulted in the extermination of the forests on enormous areas in Canada and the United States.

Selection of Right Kind of Lumber

Our forefathers, when they shouldered their axes and went to the forests in quest of the wherewith to build, exercised far more care and discrimination in selecting material best suited to their needs than most people do in buying building material to-day. To the majority, lumber is just lumber, and since they have no extensive technical knowledge of its various species, forms and grades, they buy and use it somewhat blindly, trusting to luck that it will serve its particular purpose long and well.

Enormous sums could be saved by builders if this most valuable structural material were selected and used with the same care that marks the utilization of other important commodities. There are numerous species of wood largely used in building, some adapted to a very extensive and others a very limited number of uses; there may be a wide variation in quality of lumber of the same species, and there is an important saving in utilizing for any special purpose the grade of lumber best suited to that purpose.

Unfortunately, selection based on actual knowledge of quality is impossible for any except the specially trained builder, and even he sometimes is unable to make a personal inspection of the material he buys before it is delivered on the job. It is a fact, however, that lumber is being manufactured and graded to-day more carefully and accurately than ever before, and the buyer who makes certain of his source of supply and plainly states the intended use of the lumber he requires, may be protected from mistakes in quality and unnecessary expense. It is entirely possible to-day to obtain lumber which bears the manufacturer's trade mark—this trade mark carrying with it a guarantee of grade and quality.

Now Enter Industry in the West

The recent purchase of 60.000 acres of timber land in Washington, reported to involve a consideration of upwards of several million dollars, marks the entry of The Long-Bell Lumber Company of Kansas City, Mo., into the industry on the Pacific Coast.

The most recent purchase, just completed, was for 33,000 acres in Cowlitz, Lewis and Wahkiahum counties, representing approximately two billion feet of fir, cedar, spruce and hemlock timber, and was purchased from the Weyerhaeuser Timber Company, of Tacoma, Wash.

The beginning of operations of the Long-Bell Company in Washington, which will follow at as early a date as possible after mill sites are definitely chosen and mills are constructed, will largely increase the distribution of Pacific Coast lumber products through Kansas City sales offices.

The entire acreage of timber lands purchased contains several billion feet of the four species of commercial wood.

The Long-Bell Lumber Company, established in 1875 and having done business in Kansas City for some thirty years, has heretofore operated largely in the South, its principal product being southern pine lumber. The company has ten southern pine mills in operation now in Louisiana, Texas, Arkansas and Mississippi, besides several hardwood mills. Much southern pine timber remains to be cut, and it will be many years before the company leaves that district.

Quebec Receives Large Estate Taxes

According to a report from the Provincial Treasurer's Department, Quebec, the duties to be collected on the estates of the late Hon. S. N. Parent, Victor Chateauvert and William Power will amount to nearly $100,000, being on a taxable amount of nearly two million dollars. In the case of Hon. Mr. Parent the taxes could have been collected by Quebec or Ontario, but the former Province was chosen by the heirs. It is also announced that Mr. William Power has left one year's salary to all his employees.

Canadian Timber for Special Uses in Britain

Large Trade Can be Done in United Kingdom But Care Must be Exercised in Cutting, Sawing and Grading—Many Possible Openings Outlined

Canadian Trade Commissioner Norman D. Johnston, of Bristol England, in a recent letter to the Department of Trade and Commerce, Ottawa, says: "There is undoubtedly a large trade to be done in the United Kingdom in Quebec red pine, Western pine, Quebec spruce and St. John spruce for special purposes as mentioned hereunder. If this trade is to be done in a large way in competition with the timber from other sources, Canadian firms will have to take great care in their cutting, sawing, and grading, so that each grade may be up to the required standard, the dimensions absolutely accurate, and the surfaces as clean cut or smooth as possible. It is suggested that those concerns that are able to export these woods and have agents in Great Britain should communicate with their representatives regarding the marketing of these products for the purposes mentioned, or if the Canadian firm is not represented on this side this office will be pleased to place them in touch with likely people to handle their goods. All the appended facts are the result of information obtained from an expert and reliable source, and Canadian timber firms would do well to give this subject serious consideration.

Quebec Red Pine for Joinery Work

The opinion is given in this district that Quebec red pine is very suitable for various classes of joinery work if it is properly graded before shipment into firsts, seconds, and thirds and sold accordingly. Different kinds of joinery work require different grades of wood. If thirds or seconds are suitable for the work the users naturally do not wish to pay for firsts. When all grades are lumped together and sold at one price the importer has not the time or room to divide the timber into different grades, and the man who only wants third or second class wood does not want to pay the high price which includes all grades, firsts as well as seconds and thirds, while the man who requires only first-class lumber for a high-grade trade has no use for the lower grades. It is therefore thought that as Quebec red pine is entirely suitable for joinery work a very large trade could be done if the wood was graded as suggested. The sizes most required are:—

4 by 11, 4 by 9, 4 by 8, 4 by 7 inches.
3 by 11, 3 by 9, 3 by 8, 3 by 7, 3 by 6 inches.
2 by 11, 2 by 9, 2 by 8, 2 by 7, 2 by 6 inches.

Western Pine for the Moulding Trade

Before the war a large proportion of the timber imported into the United Kingdom for the moulding trade was Archangel wood, but since it has been impossible to obtain lumber from this source Swedish red fir has been largely used. It has, however, been suggested that if Canadian firms would supply Western pine graded clear free of knots in such sizes as 1 by 3, 1 by 4, 1 by 5, 1 by 6, 1½ by 3, 1½ by 4, 1½ by 5, and 1½ by 6 inches they would experience a large sale, as this timber is better suited for the moulding trade than the Swedish wood, as it does not twist or cast about after machining, which is the great trouble with the Swedish product. The Archangel wood used to remain absolutely straight after it had been machined. The Swedes divide their red fir up into four grades and also cut the wood into quarter sizes. Of course price is the principal factor in marketing these woods, and in order to give an idea of ruling prices a leading firm paid within the last six months the following prices per standard for Swedish red fir, f.o.b. Sweden:—

	Swedish Red Fir per Standard							
	Grade I		Grade II		Grade 111		Grade IV	
Sizes	£	s.	£	s.	£	s.	£	s.
1 x 5½	38	10	36	10	32	10	31	15
1 x 5								
1 x 4½	38	0	36	0	32	0	31	5
1 x 4	37	10	35	10	31	10	30	15
1 x 5	38	10	36	10	32	10	31	15
1¼ x 4	38	0	36	0	32	0	31	5

In addition to these prices is added the cost of freight from Sweden to England which amounts to £6 per standard. Since these prices were given there has been a falling market and of course freight rates from Canada to the United Kingdom would be higher than from Sweden, but even so the Canadian firms who can supply good clear wood in the sizes to meet the requirements of the moulding trade should be able to obtain a price which would make the trade worth while. Canadians would also have the advantage of supplying a wood which would be more suitable for this trade than the Swedish red fir and it will probably be a long time before large quantities of Archangel timber will be offered on the market.

Quebec Spruce for Railway Wagons

During the war and at the present time the railways have been under Government control. The result has been that railway wagons have been sent all over the country and have not been returned promptly to the companies owning the trucks as is the case when the companies are under their own control. It has therefore been impossible for the companies to have the same oversight of their wagons and to keep them in as good repair as formerly. All railway companies, however, take over the responsibility of their lines after August 24, 1921, when the Government gives up control and there is likely to be a big demand for timber for new wagons and repairs, such as wagon bottoms, etc. For this purpose Quebec spruce is very suitable and the size most required is 2½ by 7 inches in lengths of 7½, 14, 15 and 21 feet. For some time they have been using home grown timber as the prices for spruce have been prohibitive for this purpose. Quebec spruce is, however, very well adapted for the building and repairing of railway wagons and with the lowering of prices a large trade should be done.

Many people have no idea of the number of railway wagons used in the United Kingdom by the railway companies and also privately owned. The numbers run into a great many thousands. In the coal fields of Wales alone there are approximately 150,000 railway wagons on hire and privately owned, not including the great quantity of rolling stock of the railway companies. It will thus be readily realized what large quantities of timber are required to build and repair wagons in the whole of the United Kingdom.

There is also a great demand for Quebec spruce in 2 x 4 inch, 2 x 5 inch and 2 x 6 inch sizes in first quality timber for the manufacture of small-sized products of various kinds.

St. John Spruce for Shipwrights

A good trade is to be done in shipping lots of from 15 to 100 standards of St. John spruce on the regular steamship liners to the Bristol channel. The lengths in greatest demand are from 16 to 24 feet in the sizes 9 x 2½ inches and 11 by 2½ inches. The latter is used principally for shipwrights for division boards to prevent grain and other cargoes from shifting, for hatch coverings and other purposes.

The endeavour has been made in this article to point out briefly some of the special sizes of certain woods which will find a good sale and the purposes for which these products are required in the United Kingdom. If Canadian manufacturers of these or other woods will communicate with this office the Trade Commissioner will be glad to give them all possible information regarding the possibilities of the market and assistance to get in touch with a firm or firms likely to be interested in their lumber.

Eastern Export Lumber Trade Languishes

The lumber trade of Nova Scotia is not in as satisfactory a condition as those engaged in it and the community generally would like, according to recent Halifax advices. The British Government has sold the timber it held on this side to an organization called the Associated Importers. They paid about £5,000,000 for the holdings of the Government on this side and overseas and at the same time obtained certain guarantees as to freight rates. The lumber they could sell at $22 a thousand feet and make a profit, a lower price than is asked by the operators. Fully 25 per cent. of the Nova Scotia cut of last year is unshipped. Prices remain nominal, but it is inevitable that there must be liquidation and the cut this winter will be small.

In this connection the condition of the wooden shipbuilding industry is interesting. It has been mentioned that a large number of the Nova Scotia vessels were finding a fairly good trade in the Gulf of Mexico. Later information is that shippers in that region were offering the owners of vessels half the charter price to cancel, but this the owners are slow to accept because of the extreme difficulty of obtaining other business. Wooden vessels built during the war in the province cannot be sold for half what they cost to build.

Every Other Material Must Come Down

The lumber interests of the United States are greatly exercised over the general stagnation in their business. Lumber manufacturing is the second largest industry in the country, says an exchange, but at the present time it is practically at a standstill, and the dealers have decided to take an inventory of all the facts so that this injurious condition of affairs may be remedied.

It is realized that if lumber is to be sold the building trade must be resumed. All over the country building work is suspended pending the proper readjustment of the trade, it is said that over one million and a half houses are needed for the immediate accommodation of the people. The building trade is five years behind. One firm of architects in Chicago alone has plans for $40,000,000 worth of construction work which is being held up solely by the unreasonable costs connected with the building trade.

Before the situation can be stabilized it is frankly recognized that building costs must follow the trend of all other business and come down if a prosperous era is to take place. It is contended that

Let Other Materials Take Their Turn in the Drop

no prudent man will build under the present conditions. Lumber prices at the present time are below the cost of production, but before building will be resumed to any extent every element that enters into the trade must come down to the right level. That means that no single item of any importance can be left out, and sand, gravel, cement, plumbing supplies, fixtures of all sorts, and materials of every kind must come down to a price which will permit their purchase so as to make the building pay. Even lower wages must be accepted in the interest of the workers themselves.

This is the ground taken by the lumber dealers, and at their association meetings they are making the fullest investigation of all the facts relating to the building trade. They claim that it is good business to put out their stocks of lumber below cost, rather than to hold them, in order to get trade. They assert that too many business men are thinking in terms of what things cost them, and that now it is time to think of what the present market will bring and get things moving.

Planting Evergreens in the Garden

The following letter recently appeared in an Orillia paper and will be read with interest:—

In your last issue I notice an invitation to discuss the cutting of Christmas trees on other people's property. I would say that a prosperous community requires cosy farm homes. These homes require trees to form windbreaks to make them cosy. These windbreaks must have their growth of young trees carefully protected. A windbreak is like a home. If the young people are taken out of a home, the home will soon cease to exist. And if the young trees are taken out of a windbreak of natural forest, then the windbreak will soon be gone, because the old trees cannot adjust themselves to changing conditions and therefore soon perish. I love a good windbreak of natural forest, and I also love a Christmas tree. To get the Christmas tree I have obtained some young spruce trees from a nursery, and planted them in a garden. They serve as an ornament to the garden while they are growing. As the tree gets bigger each year, a less number is sufficient to ornament the garden. So I cut one of these trees each year to decorate the house for Christmas. I thereby escape doing harm to any windbreak of natural forest, and I also run no danger of getting a stolen tree. I would recommend this plan of buying yearling evergreen trees from a nursery and planting them in the garden, to both town and country people. They are convenient for Christmas day, and they are an ornament to the garden all the year round. They encourage young people to enjoy their home with their parents. And they relieve the pressure on other people's evergreens and windbreaks. I remain yours truly,

Subscriber B.

Lumber Exports Almost Doubled

Statistics compiled on the lumber exports from British Columbia for the seasons 1919 and 1920 show an increase for 1920 over 1919 of between twenty-five and thirty million feet, bringing the total season's export by water to over 20,000,000 feet.

During the past season a total approximating 90,000,000 feet was shipped through Vancouver from mainland points, which was about 30,000,000 feet in excess of the 1919 shipments.

A rough total of this year's exports set the figure of 89,792,241 feet, divided as follows:

	Feet
Australia	29.791,173
Orient	22,745.696
India	3,800,000
United States	2,300,000
United Kingdom	30,346,372
South America	1,079,000
Total	89,792,241

Lumbering Activity in Edmonton District

The lumber industry in the Edmonton district is due for some busy times during the coming year. Practically all the companies operating out of Edmonton and in the near north are calling for men to work in the bush, and in some cases larger crews are being taken on than last year.

The Northwest Lumber Co., which is now logging on extensive timber berths on Lesser Slave Lake, expects to saw 20,000,000 feet of spruce lumber next summer. Its logs are brought by rail to Edmonton and milled there in the largest lumber plant in the province.

D. R. Fraser Co., one of the old established firms, will re-open its mills after a shut-down of six years. Logs will be brought down the Saskatchewan river from berths 105 miles upstream, and application is being made to the Dominion Public Works Department for permission to build piers and booms in the river to facilitate driving operations.

Paper From Southern Pine and Red Gum

The possibility of using southern pine and red gum for the production of high grade book and magazine paper has been demonstrated in recent tests at the U. S. Forest Products Laboratory, Madison, Wis. The experiments indicate that one cord of loblolly pine and one of red gum are together capable of yielding one ton of paper, at a cost which would allow a good profit under prevailing conditions. The utilization of southern pine for this purpose would also spread the burden of the pulpwood supply over considerable territory, which has a large annual growth of timber.

Book paper requires for its manufacture two kinds of wood, a long-fibered wood, such as spruce, to impart strength, and some short-fibered hardwood to give the formation, finish, and other printing qualities. The southern pines are long-fibered woods, excellently suited for the manufacture of wrapping paper and fiber board, but their pitch content and the difficulty of bleaching them have heretofore been obstacles in the way of their use for white paper. These obstacles, it has been shown, can be overcome in a large measure by proper cooking conditions and improved bleaching methods. Red gum is typical of many southern hardwoods that might be used with the pine for the manufacture of the better grades of printing paper.

There are two well balanced questions which the successful lumber merchant must ask concerning a prospect. One is—"Will he Buy?"—and the other is—"Will he Pay?"

Research Facilities for Lumbermen

Greater Recognition Should be Accorded the Industry in Forest Products Laboratory Work

If there is one industry that should receive federal encouragement and official recognition in respect to research of the varied uses to which it can be put, the peculiar properties contained, etc., it is the lumber and woodworking industry.

It has been suggested by the Canadian Pulp & Paper Association that a Research Institute be established, but, according to the information at hand, the proposal does not take into consideration the requirements of lumber and woodworking. This would appear to be a short-sighted policy and one which should not be overlooked.

At a time when Britain, India, Australia and Norway are founding institutions on the lines of the forest products laboratories and laying great stress upon the proper utilization of lumber, it is highly advisable that Canada should do something in this direction. The Dominion is the largest timber-producing country in the British Empire, and it would seem an ignoble part for Canada to play to take a secondary position in respect of investigation into forest products.

The forthcoming meeting of the Canadian Lumbermen's Association might well give consideration to the establishment of a Division of Lumber in the Forest Products Laboratories of Canada. Among the many activities which could occupy the time and energies of such a division the most pressing are:—

(a) Utilization of wood-waste by chemical or mechanical means.
(b) Storage, seasoning and kiln-drying of Canadian woods.
(c) Mill scale studies.
(d) Technology of veneers and plywood.
(e) Use of glues and adhesives.
(f) Finishing of wood.
(g) Manufacture of special products, wood-wool, wood-flour, dowels, etc.
(h) Selection of woods for special purposes.

To-day inquiries along these lines reach the Forest Products Laboratories in Montreal almost daily. In some cases a little research enables those in authority to answer the questions satisfactorily, and in other cases a reference can be found in books or periodicals. As a rule, however, there has to be made a candid confession that the Forest Products Laboratories have no staff for investigation either by study or experiment into such problems.

It would not involve a heavy expenditure to establish a Division of Lumber, undertaking the work already outlined. As a beginning, a staff of four persons would suffice and about $10,000 should cover the salaries for the first year, while the cost of equipment would be about $2,000. Much would, of course, depend upon the problems selected for attack. The benefits which would accrue in general and to the industries connected with lumber may be enumerated as applying to the forest lines of research already stated.

(a) Reduction of loss incurred in the disposal of waste materials and probable conversion of the latter into a source of profit.
(b) Reduction of loss incurred by the de-grading effects of seasoning and kiln-drying.
(c) Exact information concerning the yield of the log.
(d) Improvement in manufacturing processes and in the quality of the product.
(e) Increased efficiency and economy in the use of adhesives.
(f) Increase in the decorative possibilities of Canadian woods.
(g) Development of industries new to Canada.
(h) Technical and scientific service to manufacturers.

An Active Committee on Reforestation

The Belleville Rotary Club has appointed a committee on reforestation. The members of the committee are Judge Wills, J. O. Herity, E. Gus Porter, K.C., and Capt. W. E. Schuster, president and general manager of the Schuster Co., lumber and timber merchants, Belleville. Ont. Capt. Schuster served with the overseas forces from 1916 to 1918.

It is the intention of the new committee to go into the work of reforestation, particularly as it applies to the county of Hastings, and keep at it until something is accomplished. Capt. Schuster announces that the committee intends to be an aggressive, vital force along the line of conservation and reforestation.

Largest Trestle on the Continent

It is learned from an authoritative source that plans are under way for the construction next year of a new union station in Camrose, Alta., and that Canadian Northern and Grand Trunk Pacific trains will enter that place over tracks of the Canadian Northern Railway. This project is the result of the condemnation for railroad traffic of Duhamel Bridge, which spans the Battle River, about eight miles southwest of Camrose. This structure, described as the largest trestle on the American continent, and perhaps the largest in the world, is 3,287 feet in length and 118 feet high. Approximately 3,800,000 feet of lumber were used in its construction.

The Man Who Has Tided Us Over

By G. R. Wells

Man from time to time has been enabled to so order the state of affairs that he or some few select ones are in a position to command not only the attention of their less fortunate fellowmen, but also to eliminate them entirely in business activity.

Even so, the poor wholesaler has ofttimes been consigned to more torrid regions where he would know neither snow nor cold. But he, like the cat, through some unforeseen agency, lives on.

Let us all remember this—The wholesaler is a very necessary evil.

You, who have for so long been held with nose to the grindstone and have been unable to forget business cares to close on the last day of the week for even a brief spell of four hours.

You, who have so often purchased your lumber from the traveller, only to have the order cancelled, so that the wholesaler could resell at a greater margin of profit and have then left you in the lurch. Please remember.

He who runs may read; but do not in endeavoring to read, forget the time when an extra thirty days with the two per cent, (not beer) was ofttimes a friend indeed.

Then who was there to tide you over an occasional spot of extra hard sledding, and with his lumber and time added to the due date of the drafts, enable you to smile once more and look forward to the day when we as wholesalers could be eliminated and the government would be the agency from whom you would buy your requirements.

Of course since we handle the long end of the deal and not the stock, we must be prepared to step away from our position and with open arms allow all the wild harum scarum schemes, which anyone may devise, be put in our stead.

In dealing with profits, it has been stated that as retailers, you require thirty-three and one-third per cent. of a gross profit. Assuming all things equal, may we as wholesalers accept even one-half or one-third as great a profit?

Well, enter the game and the fields far aways will not appear to such an advantage as they apparently do now, if one may judge from the sayings of those who are ever ready to voice an opinion ruinous to the wholesaler, but which is calculated to bring a greater profit to themselves. Yet how long is it since the same wholesalers were friends indeed to them.

In conclusion, let us remember it is the time of year when peace and goodwill ought to prevail; and only by the closest harmony can we one and all hope to succeed in weathering the present storm of unrest. Therefore, let us remember to have more charity towards the poor unfortunates called wholesalers.

How Pulp and Paper Exports Grow

Comparative statement of value of pulp and paper exports for first six months of fiscal years 1918, 1919 and 1920 should read as follows:

	1918	1919	1920
Paper	$21,821,915	$27,119,246	$43,025,764
Chem. pulp	15,903,189	14,008,388	33,579,554
Mech. pulp	2,512,086	2,618,338	10,638,158
Totals	$40,237,191	$43,745,972	$87,243,476

Exports for the first six months of 1920 were about 105 per cent greater in value than were those of the corresponding period of 1918

Trinidad Grants Canada Preference

Canadian food and cattle stuffs exported to Trinidad are to be given preference over goods not produced within the Empire, according to a cable received from Edgar Tripp, Canadian Government commercial agent, Port of Spain, Trinidad. The cable reads: "All duties have been removed from food and cattle stuffs produced in countries of the British Empire. Sufficient duties will be imposed on foreign goods to give Canada a preference."

General Jottings of Timely Interest

The employees of the Abbotsford Lumber, Mining & Development Co. were entertained to a lavish dinner on Christmas Day, and each man was presented with a cash bonus.

Kaministiquia Pulp & Paper Co., who are erecting a groundwood plant at Port Arthur, will increase the capacity from 25 to 100 tons a day, and are issuing bonds in order to carry out this undertaking.

J. Ernest Michaud of St. Quentin, a well-known lumberman, died recently at the St. Louis Hotel, Campbellton, N. B. He became suddenly ill when starting for his home on the train and had to return to Campbellton for medical attention. He passed away shortly after.

The Wayagamack Pulp & Paper Co. of Three Rivers, which is one of the largest producers of sulphate pulp and kraft paper in Canada, have shut down for some time owing to having large stocks on hand and the demand for their products being comparatively quiet.

The Shuniah Pulp & Paper Co. will erect a 100-ton ground-wood pulp plant at Port Arthur in the building known as the "Port Arthur Wagon Works." Among those interested in the new industry are R. Whiteley Plummer, of Chicago, Ill., and John Stirrett & Sons of Port Arthur.

Frank Paterson Currie, who was president of the Diamond Paper Co. and of W. & F. P. Currie, Limited, Montreal, died recently after an illness of several months, from heart trouble. Mr. Currie was in his 82nd year and came to Canada in 1862. He was a well-known figure in the manufacturing and commercial world.

The mills in the State of Washington recently cut the wages of their employees from 15 to 25%. The wage reduction will affect 60,000 workmen, and a new scale has been adopted by all the mills. Under the new schedule common labor is reduced from $4.40 to $3.60 per day, while skilled labor will receive a proportionate cut. The lumber manufacturers declare that prices are at the lowest level known in years.

John B. Cook, for over twenty years a clerk in the Department of Lands and Forests of Ottawa, who gave evidence before the Timber Commission last summer, disappeared several weeks ago from his house, 384 Sackville St., Toronto, and has not been heard of since. It is understood that Mr. Cook was to have been retired at the first of the year under the civil service superannuation scheme. For some time he had been suffering from a nervous breakdown.

Simonds Mfg. Co., of Fitchburg, Mass., has issued an instructive and illustrated booklet on "How to File a Cross-Cut Saw." This brochure should prove of great value to users of cross-cut saws, no matter what make. A copy will be sent to anyone who takes the trouble to drop a line to the manufacturers. The Simonds Mfg. Co., have four factories, two at Fitchburg, Mass., one at Chicago, Ill., and one in Montreal, and they also operate the Simonds steel plant at Lockport, N. Y.

The Laberge Lumber Co. of Sudbury, report that they expect a fairly good building year during 1921 providing the nickel mines and smelters are operating. 90% of the business in the north is dependent upon the nickel industry, and if there is a lively requisition for these products, the result is much activity in building and other lines. J. A. Laberge, secretary-treasurer of the Laberge Lumber Co., who was recently re-elected mayor of Sudbury, says the labor situation is much better as the men now do a fair day's work for the money they receive.

The Spruce Falls Co., of Neenah, Wis., are making good progress in the erection of their sulphite pulp plant at Spruce Falls, formerly known as Kapuskasing. They hope to have the sulphite department in operation early in May. The mechanical pulp plant will not be running until late in the fall because the operation of the latter depends upon water power, and it will be impossible for the company to get their hydro-electric development in shape for some months. The company are operating two small sawmills in connection with cutting lumber for their construction programme. They have plenty of pulpwood on hand to meet their requirements for the coming year.

The Brompton Pulp & Paper Company held its annual meeting recently in Montreal and the regular quarterly dividend at the rate of seven per cent., was declared payable. The financial statement showed earnings after expenses and taxes of $1,853,588, which after deduction left $676,886 for carrying forward.

F. N. McCrea, president, in his address, said that the earnings shown represent only those of the parent company and the subsidiaries at Claremont and Groveton, in the United States, ended their fiscal year December 31, but their combined earnings would, he said, equal those of the parent company. The board of directors was re-elected without change.

The H. R. MacMillan Export Co. of Vancouver, recently issued a neat leaflet, entitled "Yours for the Extension of Canadian Trade Throughout 1921." Inside was a picture of a shipment of creosoted ties being made by the MacMillan Co., to India. There is shown a large pile of ties on the dock and also several scow-loads drawn up alongside the steamer, "Canadian Inventor," which carried the "sleepers," as they are known overseas, to India. Opposite the picture was a note to the effect that such shipments helped Canada's trade balance and that the cargo was Canadian timber creosoted in a Canadian plant, with Canadian creosote, exported by a Canadian firm insured in Canadian companies and carried to its destination by the Canadian merchant marine.

G. Mason & Co., who some time ago acquired by purchase the timber limits and sawmill properties of Manley Chew at Midland, Ont., of which Major G. L. Main is manager, report that the camps have given a record cut of logs so far this season, and they are anticipating an exceptionally long, busy cutting period during the coming year. The mill is being put in splendid shape to run to capacity. It is the intention of the company to enlarge the sorting shed and alter the trimmers so that they can pull both ways. They will also make some alterations to the interior of the plant. At the recent municipal elections in Midland, the town granted the company a fixed assessment of $25,000 for ten years on the mill, plant and any future extensions. The by-law was carried by 883 to 36, so that the verdict was almost a unanimous one for the passing of the measure.

There is a feeling in the ranks of B. C. lumbermen that conditions will right themselves in the spring and that along about the first of March there will be a turning of the tide, when wider purchasing is anticipated. At that time it is believed that more building will be started and from that on the market will show a steady improvement. The shingle trade has also been very dull for quite a while or, as one of the manufacturers recently stated, "in a very comatose condition." The B. C. Mills, Timber & Trading Co., are still operating on export business to Australia, New Zealand and the United Kingdom. The plant is working to full capacity and will be for some time. The Canadian Western Lumber Co. have, during the past few months, been producing only about 70% of their capacity. There has been a wage cut but the men were satisfied to accept it rather than see the plant close altogether.

When the Season's Cut is on

When the red squirrels frisk from limb to limb,
When the ice goes out of the log pond dim,
When the bull-frog croaks by the reedy bank
And the musquash flops right in "ker-plank"—
When the long brown logs lie side by side—
Deceptive brutes—look easy to ride—
When the sunshine warm floods the green clad hills
I'm crazy to work in a lumber mill.
Ain't you?
If you ain't what would you do?

Then I'd like to have a peevy-stick
Or a long pike pole to turn the trick,
And crawl right out on the log pond boom.
I wouldn't care a darn if there wasn't much room—
A lay old log I'd try to ride
And pole myself "o'er the silvery tide."
If I fell right in I'd splash with a will—
Oh, I'm crazy to work in a lumber mill.
Ain't you?
If you ain't what would you do?

There's the pond man's job I'd like, I think,
He teeters around the dizzy brink
And punches the ribs of the logs that glide
Into reach of the dogs on the chain log slide
His feet are wet—in his back a crick—
But what's the odds, he's never sick—
Why, "Century Pete," he works there still—
Oh, I'm crazy to work in a lumber mill.
Ain't you?
If you ain't what would you do?

You can hear, inside the bandsaw's whine,
And the splinters fly and the sawdust fine
The carriage shoots, as the saw tears through—
The old exhaust goes "cho-o-o-o, Chu——"
The carriage men bend to catch the slack—
The nigger pops up—the log falls back—
The edger man hops to his job with a will.
Gee, I'm crazy to work in a lumber mill.
Ain't you?
If you ain't, what would you do?

You can snuff pine smell till your rib bones crack.
You can eat all the grub in the cookin' shack,
You can sling, like toothpicks, boards of pine—
You feel as fit as a fiddle fine.
Your job is right—your work is play,
It's fun to live when you feel that way.
It's a man-sized job—takes a man-size will—
I'm crazy to work in a lumber mill.
Ain't you.
If you ain't what would you do?

Keeping the Truck Running Steadily

A leading sales manager recently sent out some valuable pointers and suggestions with respect to getting the maximum service out of a truck and adding to its length of service. Here are the instructions:

What underlies sound motor truck maintenance? How long will a truck last?

These question are often asked and cannot be answered. except by saying "That depends."

It depends, to a considerable extent, on the quality of the truck, its construction, its constitution; somewhat on the work it is called upon to perform, and the way in which it is handled.

But, most of all, it depends on the attention it receives—its monthly weekly, daily, even hourly care. "Maintenance" is the word which describes this care.

As an illustration. A locomotive, after a trip, goes into the roundhouse. An expert mechanic goes over it, inspecting every part, trying every bolt with his wrench, sounding every rivet, testing every piece for looseness or play, adjusting this and tightening that, until the engine is declared fit to travel another trip. This is "maintenance." A searching for troubles while they are small before they become big. If this is necessary to the locomotive, how much more so is it to the truck.

"Inspection" is the basis of truck maintenance.

The first step is to question the driver, or rather make him feel that it is up to him. That he is a part of the system. On him depends the proper operation of his truck. He may know little or nothing about a truck, but he is operating the truck during the day under all conditions, and troubles or symptoms of troubles come to light on the road which might remain hidden during the inspection.

Trucks should receive a regular inspection, at least once a month. This and that tightened up, and the radiator drained of water, flushed out by allowing a constant stream of water to flow through it, then refilled with clean water when filling same. Oil should be drained, drip pan cleaned and new oil put in. Discs, clutch, brakes and brake-bands, transmission, every part of the truck inspected, all nuts tightened up. This insures the life of your truck.

The more care and attention given to trucks, the less cost of operation, the longer its life and less parts to replace. The less trouble encountered in the operation of a truck, the less the cost of upkeep—avoid delays or loss of its use, and more satisfied drivers.

No truck owner allows a mechanical trouble to continue after he knows that it exists, but how many little mechanical ailments develop into serious troubles before they are discovered.

The secret of successful truck operation and maintenance is not to be found primarily in the prescribing—repairing—replacing or readjustment, but in the diagnosis, the inspection which discovers which parts are in need of attention.

Of course you will see many trucks that are poorly cared for, giving service for two, three or five years, but consider the additional years that can be added, by proper care and the saving in its operation, to be had from such care.

The old adage that "The ounce of prevention is worth a pound of cure," has no more forceful application than to the maintenance of your truck, whether you operate one, two or a fleet of them.

Motor Truck Industry Has Biggest Year

Despite depressed business conditions, the motor truck industry in 1920 not only equalled the 1919 production of motor trucks, but exceeded it by 43,000 vehicles, giving a total 1920 production of 348,000 trucks.

While the average business man is not particularly interested in tht motor truck industry, he is vitally interested in the means of highway transportation supplied by that industry as will be exemplified at the coming Highway Transportation Show, to be held by the Motor Truck Association of America at the 12th Regiment Armory, 62nd Street and Columbus Avenue, and the 1st Field Artillery Armory, 68th Street and Broadway, New York, N.Y., beginning Monday, January 3rd, and closing Saturday night, January 8th, 1921.

All the newest models of highway transportation vehicles. bodies, auxiliary equipment and accessories will be on exhibition at the two armories. Educational conferences will also be conducted in daily session at each armory for the benefit of those who are interested in knowing more about present means of highway transportation and new methods to make highway transportation even more efficient than it now is.

Perhaps the greatest single factor in making the 1920 production of trucks greater than that of 1919 was the tremendous increase in the manufacture of small speed trucks of three-quarter to one-ton capacity. In previous years trucks of one-ton capacity and under, generally did not exceed sixty per cent. of the total production; but in 1920 almost seventy-five per cent. of all the trucks made were of one-ton capacity and under. Speed waggons of the Reo and Oldsmobile type are perhaps the best examples of this classification of vehicles which has had a very wide sale during the past year, on account of its ability to be used economically in practically all classes of light haulage work. Of course, the Ford one-ton truck, of which approximately 150,000 were produced in 1920, has also had a very important bearing on the increased production of the small, lightweight, speedy trucks as compared with the heavier vehicles up to five and seven and one-half tons in capacity.

According to an analysis made by "The Commercial Vehicle" in its review issue of January 1, 1921, the average prices of all different sizes of trucks have increased only eight and one-half per cent. up to January 1, 1921, as compared with January 1, 1920. Taking the different sizes of trucks separately, those of less than one-half ton capacity have increased most in price. Trucks of less than one-half ton capacity have jumped twenty-five per cent. in price. Three-quarter tonners have increased nineteen per cent.; one-tonners ten and one-half per cent.; and one and one-half tonners 12.3 per cent. Trucks of from two tons capacity up have increased individually anywhere from one-tenth of one per cent. to 7.3—these low individual price increases helping to bring down the total average price to the figure of eight and one-half per cent.

According to the same authority, trucks of one and one-half ton capacity form the most popular model—no less than one hundred models or twenty per cent. of the total number of 527 trucks listed on the 1921 market being of one and one-half ton capacity. The next most popular model is the two and one-half tonner, with ninety models; followed by the three and one-half tonner with eight-four models.

An analysis of the final drive situation as made by "The Commercial Vehicle" shows the predominance of the worm-driven rear axle when considered from both the viewpoints of trucks actually produced and the number of models offered for 1921. The 1921 production of trucks were fitted with the types of drive shown in the table below:

Worm	63
Bevel	15¾
Internal-gear	15
Double-reduction	4½
Chain	1¾

When the final drive situation is considered from the viewpoint of the number of different models offered for 1921 with each type of drive, the analysis gives the following percentages:

Worm	68¼
Internal-gear	21½
Chain	4½
Bevel	3½
Double-reduction	2¼

Further analysis of the new trucks for 1921 indicates that pneumatic tires have now become standard equipment on trucks of one-ton capacity. Last year, trucks of this capacity were fitted with solids as standard equipment. The use of four-speed gearsets to produce trucks with greater speed ranges, and a greater pulling power at low speed has increased considerably; and four-speed gear boxes are now average standard equipment on all trucks of two-ton capacity and over.

The trend of design on other truck units show an increased use of cast case radiators and tubular cores, as against sheet case radiators with cellular cores; dry disk clutches at the expense of other forms—amidships location of the gearset for easy repairs—vacuum fuel feed systems; and the use of metal instead of wood wheels, especially on the heavier models.

Mr. Payette Steps Into Civic Chair

J. T. Payette, who was recently elected Mayor of Penetanguishene, stepped into the chair direct from private life instead of through the usual route of serving in the town council as alderman or reeve. However, many a good Mayor has had his first municipal experience in the chief civic seat, and no doubt Mr. Payette will make as successful a record in this arena as he has in connection with his industrial career.

Mr. Payette is 35 years of age and is a native of Penetanguishene. He quit school when he was 14, but prior to this in the summer holidays assisted his father, who was a contractor. In those times it was not unusual to work 10½ hours a day. Mr. Payette's first job was with the late P. Payette in the office. He then secured an in-

J. T. Payette
Mayor of Penetanguishene, Ont.

sight in every department of the foundry and machine shops and also took up a course with the International Correspondence Schools in mechanical draughting. Later he spent some time at a business college in Belleville taking up special work. When the subject of this reference took over the business from the heirs of the late Peter Payette, manufacturer of high-grade sawmill machinery, the number of hands on the payroll was 10. This has been increased to 75 and the company are shipping material to all parts of the world. Their foundry department alone turns out over 20,000 tons of casting a year.

The P. Payette Co., of which Mayor J. T. Payette is the proprietor, have in their shop all the latest model machines, and nearly five years ago purchased the Adams Launch & Engine Co. This business alone has added quite an item to their work, as it has been run to full capacity for a long time.

Mayor Payette purchased the town park from Penetanguishene some three years ago, and had it converted into one of the best race tracks in Canada. He is the lover of a good horse and says the race track has been quite an attraction for Penetanguishene.

Rapid Development of Lumber Industry

Canada's 225 million acres of merchantable timber is the second largest asset of her natural resources wealth. The bulk of this timber is within easy reach of tidewater. Nova Scotia, New Brunswick and British Columbia can almost dump their logs in the oceans, while Quebec and Ontario have the St. Lawrence River for a path to the sea.

In 1908 the greater part of Canadian lumber exports went out in the raw state, only a little over one-third was manufactured in Canada. The next ten years saw a strong and continued increase in industrial development and by 1917 the tables had quite turned. In that year more than 70 per cent. of Canada's lumber exports were manufactured and less than one-third left the country in a raw state.

Ever increasing demand for pulpwood and paper is responsible in large measure for this rapid development. American imports, of Canadian woodpulp (all kinds) for four months, ending July 31st, 1920, amounted to $20,839.881. According to latest statistics Canada's available supply of pulpwood is 901,000,000 cords and covers 350,000 square miles. Over a third of this spruce and balsam stands in the eastern provinces, convenient to the eastern states with their many newspapers and publishing houses. It is estimated that, at the present rate of cutting, this supply will hold out for 62 years. Strict cutting regulations, wise conservation and reforestation plans are looked to, to prevent the annihilation of Canadian forests and lumbering industries.

British Columbia's woods are attracting much foreign capital. American money is going into new pulp and paper mills on the Pacific Coast. Approximately 85 per cent. of all capital invested in the paper pulp industry in Canada is American. An English syndicate is building a $250,000 furniture factory in British Columbia. Box factories flourish all over the province. The small fruits, vegetable, honey and poultry ranches of the southern part of the province need countless crates and boxes for getting their produce to market. British Columbia's strategic situation for shipping to Pacific Coast ports and the Orient, its numerous good harbors and the fact that the climate permits all the year round lumbering have not been overlooked by capital seeking investment.

Will Float Cottonwood Logs to Mill

Mr. Shean of the Laminated Materials, Ltd., of New Westminster, arrived in Pemberton, B.C., recently, to speed up work in connection with the cutting and delivery of cottonwood timber to the river bank for water transportation to Harrison Lake, and thence to the company's mills at New Westminster.

The transportation of cottonwood logs by the water route from Pemberton to the Fraser is considered by some to be a doubtful undertaking owing to the sand bars at the head of the Harrison. The shallow area at this point appears to be a moving quantity, thus making impossible any permanent construction. In the meantime Mr. Shean will use long timbers and boom chains to confine the cottonwood timber to the deep channel. The question has been asked whether cottonwood logs, water-soaked, will float, but it is said actual demonstration proved the fact that there is no fear of the timber not keeping the surface of the water.

The company is paying the owners in Pemberton $1 per M. on the stump and offering the ranchers $6.50 a thousand for delivery of the logs of a minimum thickness of 20 inches to the river bank.

Quebec's Heavy Receipts From Forests

The receipts from the Department of Lands and Forests of the Province of Quebec during the last fiscal year were very large, totalling $3,033,587, of which $2,604,456, came from the Forestry Department. It is expected that this revenue will be considerably increased during the current year. Under the new arrangement, lands will be added to the Department of Colonization, Mines and Fisheries, in charge of the Hon. J. E. Perreault, while the Hon. H. Mercier will continue to take charge of the Forest Hydraulic Department.

In his report Mr. G. C. Piche, chief forester, states that it will be necessary to increase the size of the Government Nurseries at Berthier. Mr. Piche states that the use of hydroplanes in the Lake St. John region has brought excellent results. The airmen are also rendering service in getting information on the unexplored regions.

Lumber Exports From St. John Are Quiet

The exports of lumber from the St. John district, which were exceedingly heavy the past summer, have suddenly fallen to a low ebb. It is understood that no contracts have as yet been made for any winter sawn timber. Stocks of deals and scantlings are heavy. but those of low-grade refuse lumber are well reduced.

The exports of lumber from the district of St. John to the United States for the years 1918, 1919 and 1920 were as follows:

Quarter periods	1918	1919	1920
First	$ 587,107	$ 132,527	$ 898,859
Second	966,281	464,545	1,467,377
Third	652,698	909,824	1,371,756
Fourth	602,693	997,901	.....
Total	$2,808,779	$2,504,797	$3,737,992

Do Not Have Characteristic Fiber Length

Thousands of measurements by the Forest Products Laboratory at Madison, Wis., on wood fibers do not confirm the general supposition that each species of wood has a characteristic fiber length. These measurements show that a greater difference may be found in one tree than exists between the average fiber lengths of different species.

In one Douglas fir disc the fibers varied from .8 to 7.65 millimeters (.03 to .3 inches) length, which is a variation of nearly seven millimeters. On the other hand, the average of seven thousand measurements on Douglas fir and longleaf were less than one millimeter apart. being 4.41 and 3.67 millimeters, respectively. In the first case, 67 per cent of the fiber measurements in one tree fell between 4.5 and 6.5 millimeters, which roughly indicates the meaning of the common term "average fiber length" for the tree or species.

Not Brought for Ulterior Purposes

The Attorney-General for Ontario was successful in an appeal to Justice Orde, and the Russell Timber Company, Limited, and Walter H. Russell, must strike out from their statement of defence the allegations of "ulterior purposes" on the part of the Attorney-General, and their counter claim for $100,000 for damages. Paragraphs 14, 15, 16, 18, 19 and 20 of the defence are to be struck out.

The Attorney-General brought suit against Walter H. Russell and the Russell Timber Company, of Port Arthur, to set aside certain timber patents, and for damages for alleged trespass and cutting of timber on Crown lands. The timber company replied by the allegation that the suit was brought for "ulterior purposes." It was alleged that the Attorney-General was suing on behalf of His Majesty the King, as he had not so stated, and Master-in-Chambers, J. A. C. Cameron, upheld this view, which was reversed on appeal to Justice Orde, who gave evidence recently.

Valuable Contribution to Lumber Literature

The Long-Bell Lumber Co. recently issued a handsome black and white edition of a new book entitled "From Tree to Trade." The publication is a de luxe one in every respect and in wealth of engravings, letter press and general artistic effect, is undoubtedly the most attractive publication ever turned out by this widely-known firm. "From Tree to Trade" is a valuable contribution to the literature of the lumber industry, and replete with interesting information and beautiful illustrations.

The Long-Bell Lumber Co., whose headquarters are at Kansas City, Mo., state that they cannot plan for a wide distribution of these booklets as such an expensive edition is necessarily limited, but as far as possible copies will be passed out through the salesmen of the firm.

Canada Stands Strong in Pulp Line

Full confidence in the excellent prospects of the pulp and paper industry of Canada; a realization of the importance of forest conservation as a matter of vital national interest; and a strengthened conviction in the capacity of Great Britain to meet the difficulties of post-war adjustments are some of the impressions brought back by W. G. Mitchell, engineer, who for twelve months has been surveying conditions of the pulp and paper industry throughout Europe on behalf of the Canadian Export Paper Company, Limited, He is more than ever convinced that, in the field of pulp and paper production Canada stands in a most favorable position.

Three of the leading pulp and paper exporting countries of northern Europe are Norway, Sweden and Finland. As regards the two former, Mr. Mitchell believes the development of the pulp and paper industry has reached the maximum, and possibly in Norway it has passed the peak of productive capacity. Finland stands in rather a different position, as there is still some margin for increase, although there, too, there has been a substantial addition to production during the past four years.

With reference to Canadian prospects in European markets, Mr. Mitchell pointed out that considerations of transportation enter largely the direction of overseas pulp and paper trade. The outlook of pulp and paper world trade prospects indicate still further increases in consumption and little probability of over-production or crowding of markets for any long period.

In European production of higher grade papers and specialty products, Germany, Austria and other countries of Central Europe formerly held an important place. In these countries production is still below normal and in some cases recovery will probably be slow.

Retailers Want Duty Free Lumber

Retail lumber dealers urged the House Ways and Means Committee to allow lumber to continue to come in from Canada free of duty.

They declared a duty on lumber such as is sought by some American manufacturers, will increase building costs and retard huge activities.

The position of the retail dealers was stated by A. Malone of Minneapolis. His contention was supported by E. B. Hill, a retail lumber dealer of Pittsburg, and George Comfort, representing retail and wholesale lumber dealers of Cleveland.

Death Blow to One Big Union

An action which labor men believe will prove a death-blow to the One Big Union west of Winnipeg was taken by the delegates at the British Columbia Coast Loggers' Convention, according to reports of the meeting. The delegates, after a long discussion, decided to withdraw from the One Big Union and carry on their own industrial organization independently. This step taken by the loggers is the outcome of a dispute which existed between the loggers' organization and the general office of the One Big Union, and indicates the refusal of the loggers to vote on the amendments to the One Big Union constitution introduced at the Port Arthur convention. The decision of the British Columbia coast loggers was taken as an almost sure indication that at the general convention the entire affiliated industrial workers, camp, mill and agricultural, of loggers' unions will sever connections with the One Big Union.

Death of George W. Kilburn

George W. Kilburn, manager of logging operations for the Nashwaak Pulp & Paper Co., died recently at his home in Fredericton, N. B., after a short illness from pneumonia. He was 41 years of age and was born in York county, New Brunswick. He had been engaged in lumbering all his life, having been a superintendent on the Upper St. John River for John Kilburn of Fredericton, before taking charge of logging, driving and rafting operations on the Nashwaak River some eight years ago. He is survived by his wife and three children. The late Mr. Kilburn was highly respected and was secretary of Victoria Lodge, Independent Order of Odd Fellows.

Woods Wages in the East Take Drop

Wages in the lumber woods of New Brunswick have taken a big drop this year. The prevailing rate of pay at this time is sixty dollars per month. with board, whereas last year it was seventy-five or eighty dollars per month. In one camp a crew that had been receiving sixty dollars a month recently made a demand for ninety dollars. When the increases were refused, fifty quit the job at once, but their places were filled in short order by other men, who accepted the sixty dollar rate.

So far the pulp mills have been busy cutting their raw materials in the woods, but there are rumors afloat that these will shortly reduce their staffs.

Chicago Paper Has Limits in Quebec

Pulpwood cutting is now proceeding on an extensive scale on the timber limits bought by the Chicago Tribune on the North shore of the St. Lawrence, 400 miles below Quebec. The area purchased by the Tribune comprises 500 square miles of forests. The new towns have been created by the company, namely Shelter Bay, and Baie des Cheldres, with a population of 1,200 people, and more than 100 horses. The company has damned a river and constructed a power house and built tugs for loading the logs onto freights. The logging operations are now in full swing. The logs are cut to 4-foot lengths at the mills and during the season of navigation are to be taken up the river on freighters to the Chicago Tribune's paper mill at Thorold, Ont., near Niagara Falls.

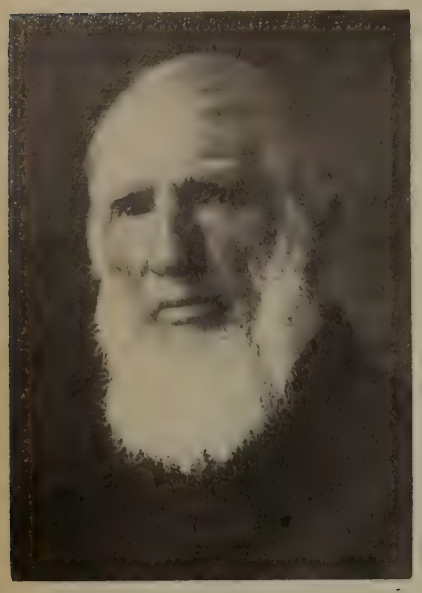
The Lumber From Dead Trees

The prejudice held by certain builders against the use of lumber from fire or insect-killed trees has been proved groundless by recent experiments of the United States Forest Products Laboratory. Here it has been found that lumber cut from sound dead trees is in no way distinguishable from any other, except that it may be partly seasoned. If the wood has not been injured subsequently by decay or further insect attack, this "dead" lumber is the equal of "live" of the same grade for all structural purposes.

An Old Friend Sends Greetings

The Georgian Bay Lumber Co. of Waubaushene recently received an interesting letter from G. H. Jenkins, assistant to the general purchasing agent of the Grand Trunk Railway. It explains itself and is as follows: "We have heard with regret through the "Canada Lumberman," and from other sources, that you are likely to cease operating your Waubaushene mill. We hope the report is not true. As you know, your company and the old Georgian Bay Consolidated Company have supplied the Grand Trunk with millions of feet of lumber over a long period of years. The business has been very satisfactory to us and our work is not going to be the same if there is to be no Georgian Bay Lumber Company to deal with. We hope some way may be found to enable you to offer us lumber. In the meantime, we want to say how much we will miss the connection if you do go out of business, and we also want to extend our good wishes if it should be found you are to continue."

Merges Big Interests in Joint Stock Company



J. R. Booth, Ottawa
"Canada's Lumber King"

After having conducted and built up one of the largest lumber and pulp and paper businesses on the north American Continent as an individual, John R. Booth, Canada's lumber king, has in his ninety-fourth year, consented to merge his mammoth interests in a close corporation joint stock company, having capitalization of ten million dollars. Henceforth, the business known all over the American continent, and in most other parts of the world as John R. Booth, will be known as John R. Booth, Limited.

Despite newspaper reports, ascribing the change over in the style of the firm to an attempt to evade taxes, etc., such is not the case. The real reason is a protective one, and not a tax dodging one.

The capitalization of $10,000,000 does not, it is generally conceded, indicate anywhere near the value of the assets, holdings, and business of John R. Booth's interests. It is doubtful if it represents twenty-five per cent. of his immense wealth, when taking into consideration the present day value of his vast timber areas, some of which are untapped as yet, and are of virgin growth, his mills, camps connection with transportation companies, and his pulp and paper enterprises.

Official announcement on behalf of John R. Booth, Limited, was made to the correspondent of the "Canada Lumberman," that the operations hitherto carried on by Mr. Booth would be continued in exactly the same manner as in the past. No stock in the new company will be placed on the market, as it is already all held by the incorporators, who are: John Rudolphus Booth, lumber merchant Charles Jackson Booth and John Frederick Booth, Esquire, Helen G. Fleck, wife of Andrew Fleck, Esquire, and Wentworth Greene, solicitor, all of Ottawa.

The terms of incorporation cover every one of the many different phases of the operations conducted by John R. Booth and which, through his efforts, he built up and established to make him one, if not the greatest of any individual, on the North American continent, doing business as an individual.

Among the chief purposes for which the limited company is incorporated are: To acquire or purchase or take over as going concerns any or all of the businesses or business enterprises or undertakings as lumberman, lumber manufacturer, lumber merchant, pulp and paper manufacturer, mine and smelter owner, landowner, agriculturalist, financier, now or heretofore carried on by John R. Booth, and all or any of the liabilities in connection therewith, upon such terms and conditions that may be agreed upon, and to issue in payment or part payment therefore fully paid up shares, bonds, debentures, or other securities, of the Company. There are also included, water lot and water power rights, water records, real estate and a lengthy list of other provisions and powers.

John R. Booth first came into the Ottawa Valley district about sixty-five years ago. For upwards of five years he was employed in different capacities by a man named Lemay in Hull. Somewhere around 1860, the year that the corner stone of Canada's parliament buildings was laid at Ottawa, he began to conduct his own personal operations as a lumberman. Since then his march of progress ownership, and construction has been one of the outstanding features of individual enterprise on the American continent. Next April Mr. Booth will be 94 years of age. According to the latest information at Ottawa he is going strong, and daily superintending his industrial operations at the Chaudiere.

Sturdy Defence of the Wooden Shingle

Speaking of the legislation which was to have been introduced this session in the Legislature by the Ontario Fire Prevention League against the use of wooden shingles—which bill has by the way been temporarily withdrawn—H. Addison Johnston, of Toronto, who as an experienced and widely known builder and construction engineer, recently said:

"I desire to make a most strenuous protest against such a measure as is proposed. It would prohibit the use of wooden shingles on any new building to be erected nearer than 50 feet to an existing structure and the same regulation as to distance would be made to apply in all cases of extensive repairs."

Taking all things into consideration, shingles laid over asbestos building paper make about the most economical and satisfactory roof for building in this country.

I have lived in Toronto pretty nearly forty years and I have not yet seen a burned down building which would have still been standing if it had been roofed with slate, tile, or metal in place of shingles over asbestos paper.

If there is a fire in a building which is hot enough to burn through the roof boards, asbestos and shingles, it is hot enough to burn through the rafters and let the roof fall in, no matter what is used in place of shingles.

If there is a fire outside which is hot enough to set fire to the shingles, the window frames, cornice, and other exposed woodwork will be blazing about the same time and no slate or other roof will save the building.

However, in the city of Toronto at least, I have never seen a brick or stone house burned down no matter what kind of roof it had. The fire always starts in the interior of the house, it burns awhile, is discovered, and the fire department puts the fire out before the framework of the roof is burned, no matter what kind of roof it has.

Mr. John Robertson of the Fire Underwriters recommends tile roofs. I presume that most citizens, after paying for a new Toronto City Hall roof will need further argument to persuade them of its superiority. Tile costs several times as much as shingles and needs heavier construction to support it.

Athletic Association Holds Fine Banquet

The banquet held by the Athletic Association in connection with the Wm. Hamilton Co., Peterboro, Ont., which took place on January 24th in the Board of Trade rooms in that city, was a pronounced success. The spirit of good fellowship between employer and employee prevailed and camaraderie was shown throughout the whole proceedings.

Over 100 men of the plant, who are members of the association, sat down with the executive officers of the company and heard addresses that were able and inspiring. Arthur Sharpe, president of the association, acceptably occupied the chair, and on his right was Mr. P. B. Westbye, general manager of the company. Mr. Sharpe, in opening the programme, gave a short address on the aims and objects of the Athletic Association. He spoke of the good results that could be accomplished in the organization, both for the building up of the men of the plant and for the splendid spirit that it so admirably developed.

P. B. Westbye, honorary president of the association, gave a short history of sport from early times down to the present, and spoke of the development and improvement that had taken place in the athletic arena. He presented to the association a handsome cup which was donated to the five-pin inter-shop bowling league for competition. The trophy was formally accepted by President Sharpe of the association and presented by him to Capt. Gibbs of Team A, winners of the premium. B team took second prize, and were awarded handsome prizes as well. Mr. Fred Roberts was also awarded a prize for the highest average score, and Mr. A. J. Halliday was the winner of the blind score. The recipients of the prizes presented their thanks to the association for same, and predicted a fine future for the association.

His Worship Mayor McIntyre, who was present, drew attention to the fine sport that he found prevailing in the shops of the Wm. Hamilton Co., and felt that the Athletic Association had a great deal to do with this condition of affairs.

Leon Fraser, Chas. Curtis, Ald. Jos. Crowe, Superintendent Chas. Norley, Mr. R. M. Glover and members from different departments throughout the shop, all spoke enthusiastically of the association and the results that would accrue from it.

The secretary's report, given informally, gave an idea of the activities of the association from its inception about six months ago, and also showed a substantial balance in the bank.

The toast to the ladies, proposed by Mr. Westbye, was responded to in one of the best speeches of the evening, by Mr. J. J. Dorris.

Paper Industry Men Hold Convention

A two-day's conference of members of the Pulp and Paper Traffic League was held in Montreal, when questions relating to the carriage and freights of the commodities of pulp and paper companies were discussed. The members of the league, who are the traffic managers of Canadian and American pulp and paper companies, had before them the subject of devising rating and routing systems, so that pulp and paper freight could be transported at the minimum of cost.

Specialize in Lumber and Pulpwood

The J. Robert Landry Company, Limited, have opened an office at 704 Drummond Building, Montreal. The firm are wholesale dealers in pulpwood and lumber, specializing in the former branch. Mr. J. R. Landry is the president, and before coming to Montreal

J. Robert Landry, Montreal

spent some years in the United States. During the war he joined the Air Force. His father, Mr. A. C. Landry, who died recently in Mont Joli, P.Q., was a lumberman and general storekeeper, and built up a very extensive business. He at one time owned a sawmill at Mont Joli, and also dealt extensively in pulpwood. The J. Robert Landry Company, Limited, have opened an office in Montreal in the belief that the city offers a central point from which business can be done.

Adoption of Trailer in Lumber Line

It would by no means be a waste of time to any prospective purchaser of a truck trailer to first give some thought to conditions under which the trailer will be called upon to work. The materials to be handled and the methods of handling will both play a big part in the success or failure of the trailer in its many adaptions to the different industries. For the most successful adaption of the trailer the lumber line really affords the best advantage. The prime benefit that a trailer will be to a lumberman is in the increased carrying capacity and the second most important point is the appreciably lower hauling costs realized. If a truck can accommodate three tons and the addition of a trailer will add three more tons to the trip load, with a comparative slight increase in the operating expense, it may readily be understood the advantage of the purchase. It woud, however, be a poor investment if the community in which the trailer is intended to be used is noted for bad roads and the grades above an average of 10 per cent. But assuming that these somewhat natural disadvantages are in the minority and the weather conditions do not greatly enter into the situation, the trailer should prove a revelation to the lumber trade.

It is of course, imperative to the lumber dealer to keep his truck moving, for this unit of transportation automatically becomes a loss if used for a loading platform or allowed to stand idle through any delay in handling. The use of the trailer, as much as it is desired to to keep it working and moving, may be disconnected and loaded while the truck makes a trip. Sometimes two and even three trailers are used by some companies in making comparative short hauls of large quantities of material by using them at both ends of the trip thus converting the truck into a tractor, hauling the loaded trailers, which are loaded between trips of the truck, eliminating the lost time in loading and unloading.

Very often a third trailer is used, one accompanying the truck in transit, again increasing the carrying capacity. Another important factor is speed, especially in long hauls. A trailer should be built so as to run at the same speed as the truck. A low speed trailer will naturally retard the capacity speed of the truck. If, however, the truck and trailer are being used in a section of congested traffic and the average speed of the truck is reduced and in consequence slower hauling results, the use of a trailer will offset this drawback scoring another point in favor of the trailer.

As a concrete illustration of the utilization of the trailer showing the practical saving realized by a company (which happens to be a brick making concern) but whose figures will afford nourishing food for thought to lumbermen interested in keeping down their hauling costs; the following example is quoted:

The Salt Lake Pressed Brick Company, of Salt Lake City, Utah, was using a four-ton truck to haul brick six miles from its plant to an apartment house under construction in that city. The truck made four round trips a day with 2,500 bricks to a load, or 10,000 daily, at a total cost of $17 per day, of $1.70 per 1,000.

The Boss and the Valuable Employee

By J. H. P.

Disagreeing with the boss does not constitute a kicker. Most employees knuckle down and agree with everything the boss says. They follow the line of least resistance, and seem to bask in the sun of that great indoor sport—agreeing with him in everything that he suggests or proposes. The valuable man is big enough, and has back-bone enough, to disagree with the boss. He has opinions and ideas of his own and is not afraid to express them. He is the man who will go up, every time, if he has the boss who is big enough himself to see the value in this employee.

Cream will rise to the top, and the old saying that "you can't keep a good man down," obtains strongly in the business world.

This "yes-ing the boss,"—for this is exactly what it means—is divided into two classes.

The first is the nut-brained individual who never had and never will have an original idea. He always says: "Yes," and our Mary's little lamb has nothing on him, as he is its progenitor. He is never late, in fact he is generally several minutes ahead of the appointed hour, even though he waits outside for as many minutes until the door is opened. He takes just his hour for lunch, and religiously quits just at the stroke of six. There being routine work in every organization, and he being able to do it, he is considered a more or less necessary evil.

The second is the fellow who really has good ideas of his own but is so lacking in courage that he does not dare to state them. The big fellow tells him how so and so is to be done. While he knows his own idea is better—as he is more accustomed to handling that work—his spine fails to work, and water instead of blood runs through his veins. He says "yes." He is a little higher than the other fellow but he gets no farther—there are no other rungs to the ladder for him. He is afraid the boss would not like his suggesting anything else and might lose his good will.

There are however, two classes of men who don't always say "yes."

The first is the pin-head who is so small as not to see the value in any kind of suggestion, except his own. He will spend much time arguing over trifles, and every miserable little thing that he can find, and when matters are finally decided, he continues with his petty objections. Pin-head stays around because the boss knows he has ideas and is not afraid suggest them, and hopes that some day the narrow mind will broaden out.

Then there is the fellow who has his own ideas, and is not afraid to speak and mention them, but is broad enough to admit that the other's plans are better. He then gets behind the idea with his whole sole and pushes. He develops in detail everything that is in favor of his plan, and also takes into serious consideration every detail of other suggestions. Taking the standard of what is best for the business and for all concerned, regardless of who suggested it, he accepts gladly his share of carrying the load.

For goodness sake suggest a plan or an idea if you have one, whereby better results can be obtained from this or that, or something done better. Offer it. The boss cannot follow every detail of all departments and everything going forth from each desk. You are paid and expected to improve your work, to study it, and no matter how unimportant your job may be, stick to this principle. The boss wants your ideas. If you find someone else offers a better idea, get behind it and be broad enough to accept it.

If you fail to suggest you can not be of practical help to the boss. Always agreeing with him won't help him. You are not preparing for a better job and larger responsibilities, if you are passing your business years always know-towing to the opinions of the boss.

Will Urge Big Federal Loan

One of the most important gatherings, which has been held in a long time, took place recently in Winnipeg, when representatives from different provinces gathered at the assembly of the Canadian Building and Construction Industries.

J. P. Anglin, the president of the association, presented his annual report, followed by those of other officers, showing that a good work had been accomplished, and everything was in a healthy condition.

Mr. Anglin was re-elected president for the coming year, and J. R. Caswell of Toronto, first vice-president; J. R. Mackie, Winnipeg, second vice-president; J. M. Piggott of Hamilton, honorary-treasurer, and G. H. Whitlock ,Moose Jaw, Sask., honorary secretary.

In his address, Mr. Anglin said that comparatively little construction work had been done in Canada since the war started and he expressed his belief that the greatest building period in the history of the country was about to be entered upon. Whether it was realized or not, the welfare of the country depends more on a revival of building activity than on any other single factor. "Think of the mines, forests, mills, industries, railroads and ships that are kept going when we are all working full capacity," said Mr. Anglin. Regarding overhead costs, Mr. Anglin believed that the peak had been reached for this generation. The same could also be said of building costs. Most of the responsible concerns were getting even with the game, and there was a tendency already toward a reduction of prices.

One of the main wants of Canada is housing. All over the country there is a demand for more homes. The meeting favored that the Dominion Government be urged to float a $250,000,000 housing loan by the sale of Government bonds. In moving the resolution, Mr. Anglin pointed out that provision was made for an owner to make use of his own labor in constructing his house, that the owners would be encouraged to build on his on individual lots, that the maximum value of the house on which a loan might be granted was $8,000 (although he had originally favored $10,000), and that lonas could be available for duplex and 3-flat houses. He was strongly of the opinion that the money should be made available through the existing channels, which were the loan companies. The ordinary builder and the ordinary owner of a lot were accustomed to negotiating with the loan companies. Inquiries had resulted in convincing him that if there was a solution of the housing problem it was to be found in making money available through existing loan channels. In taking the question up with the joint conference board, he did not think the labor representatives of the conference had any selfish motives whatsoever.

Costs of Getting Out Material High

A. J. Murphy, of Latchford, Ont., is now carrying on the business formerly conducted under the partnership of Conkey & Murphy. The retirement of Mr. Conkey was due entirely to his not being in good health and he is now spending some time in the South.

Messrs. Conkey & Murphy were in partnership for nine years. This season the latter is carrying on the operations in a general way, and will take out the usual cut, about 3,000,000 feet of lumber and from 7,000 to 10,000 cords of pulpwood.

Mr. Murphy reports that labor has been a little more steady during the last six or eight weeks. Men are not shifting around so much, but the cost of operating in general during the present winter will be just as much or a little more than last year. This will make material very high; in fact a little more so than in 1920 under the same circumstances.

Value of Sawdust as Cheap Fuel

The calorific value of sawdust as a fuel has often been demonstrated and referred to in these columns. Further abundance of this seemingly waste product in the country and the cities has again made the producer keen to turn it to good account.

Few more practical ways in turning this waste into good money has been demonstrated than by supplying it for the "Methuen stove" for cooking and heating.

The Methuen Stove Co., Ltd., situated in the little historic town of Corsham, Wiltshire, Eng., are supplying these stoves, and Corsham people, proud of their new industry, are anxious to demonstrate how easily coal shortage and heavy costs of gas and oil can be met.

To be able to cook a full-course dinner for one penny for fuel is no light feat, yet it is done daily, and to produce stoves for warming rooms, garages and greenhouses, movable at will, and which keep the room or greenhouse warm day and night without smell or fumes, is something that this Wiltshire town is proud of.

The origin of this invention is interesting. Field Marshal Lord Methuen, appointed Governor of Malta during a period of the war, realizing the extreme difficulty that the island experienced through shortage and high price of coal, introduced a simple—though in crude form—stove for the burning of olive husks, and many thousands were used throughout the island. On returning to his ancestral home, the whole system was perfected for the burning of sawdust, and even dried leaves, with good success. Those who have at hand a ready supply of dry sawdust have here an opportunity of materially reducing their own coal and gas bills, and assisting others to do the same. —Timber Trades Journal.

Will Uncle Sam Place Duty on Canadian Lumber?

In the face of the most acute housing shortage in the country's history American lumber manufacturers are making a drive on Congress for a 25 per cent. ad valorem tariff duty on all imports of lumber from Canada, says a recent despatch from Washington. The first result of such an American tariff, as witnessed before the House Ways and Means Committee have testified, would be to shut out Canadian lumber, eliminate what little competition there now is between Canada and the United States and restrict American buyers to American lumber at a time when the forests of the United States are being rapidly depleted.

This is the situation disclosed by hearings on the lumber schedule. The lumber men have a friend at court, as it happens, in Chairman Fordney, who is for a high tariff on all manufactured articles and is particularly interested in a lumber tariff as one of the big lumber manufacturers of the country.

Fordney is president of the Coates-Fordney Lumber Company, of Aberdeen, Washington, and vice-president of the Gilchrist-Fordney Lumber Co., of Laurel, Miss. He is extensively interested in lumber operations in both states, having practically withdrawn from Michigan operations, in which he was engaged originally. He began life in the lumber woods, logging and estimating pine timber, thus acquiring a thorough knowledge of the pine land and lumber industry. If his judgment goes with the Ways and Means Committee, and the House, the lumber manufacturers will get what they want in the way of a tariff.

At the present time imports of lumber from Canada are relatively insignificant as compared with the consumption of lumber in the United States. The lumber men, however, look forward to the time when the depleted forests of the United States will make it ncessary to look elsewhere for building material. Then it is they expect to reap their harvest. having—if lumber is taken from the free list and protected as desired—a 25 per cent. advantage over Canadian lumber supplies shipped into the United States. In the northwest particularly, they will have an additional advantage in the fact that Canadian labor costs in some districts are higher than costs in this country. Canadian lumber cuts little figure in competition with the American lumber industry now except along the Canadian border. As that strip of territory includes most of the automobile and furniture concerns, however, it is important.

Not all lumber men are agreed in advocacy of a 25 per cent. tariff. Some of the southern pine manufacturers and one or two of the northerners think 15 per cent. would be sufficient. A very small group of manufacturers in this country cleaned up during the war, and assert further that because of high freight rates, Canadian competition is not a factor except within the 200-mile border strip. Chairman Fordney apparently agrees with the high tariff group, for he is one of those who favor a 25 per cent. duty.

Even the hardwood floor manufacturers have joined in the request for a tariff duty, though hardwood flooring in the Payne-Aldrich Act was on the free list. Some of the manufacturers seek protection under the guise of urging a tariff duty on lumber for revenue purposes. When pinned down, they invariably admit their interest lies in protection.

One of the opponents of a tariff, calling the committee's attention to the insignificant character of Canadian competition and consequently the lack of any need for protection, declared Canada exports to the United States approximately one billion board feet of lumber annually, as against an annual cut in the United States of forty billion. In other words, Canadian competition, limited to a restricted territory along the border, amounts to only 2½ per cent. of the American production of lumber.

Canada is practically the only country that would be affected by an American tariff on lumber. Japan exports some oak to the U. S., and high grade hardwoods come from South and Central America. As the latter woods, such as mahogany, are not grown in this country, the proposed tariff would not affect any lumber sold here in competition, but would, as an immediate result, add 25 per cent. to the cost of hardwoods that go into high grade furniture manufactured for consumption in the United States.

Pulpwood and Its Varied Activities

Great Growth of National Industry

The remarkable growth of the pulp and paper industry in Canada was traced by T. Linsey Crossley of Toronto in an interesting paper delivered before the Engineering Institute of Canada recently in Toronto. Mr. Crossley pointed out that paper was first made in Canada at St. Andrew's, Quebec, in 1803, but so vast had the industry now become that in the year ending March 30, 1920, this country's pulp and paper exports were valued at $104,000,000, while the exports to the United States "made exchange" at the rate of over $340,000 every working day in the year. The most marked progress was made in the period since 1890, as in that year the Dominion's export of pulp and paper were valued at only $120.

Mr. Crossley remarked that the development and maintenance of this industry called for the display of great engineering ability offering a field for the structural, hydraulic, electrical, mechanical, chemical and forestry engineers. The average per capita consumption of paper per year was about 125 pounds in the United States and 100 pounds in Canada and the United Kingdom.

"Our forests have many enemies from the careless camper to the care-free caterpillar," he continued. "The former should be 'beaten with many stripes,' for he knows better. A forest is one of those things of beauty which may not be a joy forever. It may become an ash pile over night, or an aggregation of worm ridden joss sticks between seasons. Fungus and budworm and blister take their toll continually, and throughout the timber limits the forest engineer holds the front line trenches of a war between brains and betes noires.

"The best pulp wood limits yield about five cords to the acre, and it takes one and a half cords of wood to produce a ton of paper. Canada has about 350,000 square miles of pulp wood capable of yielding about 1,000 million cords, which we are now using at the rate of about 3¼ million cords annually. If the paper industry alone depleted the forest, our supply ought to last 300 years at the present rate. Forest fires, however, destroy more pulpwood than all the manufacturers put together, and there are in addition the forces of decay. The best wood for pulp is spruce, and it takes about 100 years for a spruce tree to mature."

Quebec Alarmed at Pulpwood Exported

The pulpwood situation has undergone very little change. There is very little demand from the United States paper and pulp mills, and the Quebec farmers have stopped cutting the wood, and the consuming mills have, with few exceptions, shut down. Prices have naturally, in the face of these facts, decreased, and the wood that cost $25 per cord and more three months ago, is now being offered at $16 per cord, and even at this discount in price, the dealers are receiving very few orders. The hardest hit by the change in conditions are the men who are indebted to the banks. This caused the drop in prices. On the other hand, the farmers and dealers who are independent, have determined to "sit tight" until the prices mount again. It is admitted that the action of the United States mill purchasers of Canadian pulpwood, in their sudden stoppage to buy, came as a surprise, but the Quebec dealers have accepted the situation in a philosophical manner and claim that sooner or later the American mills will want their wood and pay the price, which they can well afford to do, considering the profits they are making from their manufactured production.

In the meantime, the Quebec Government has become alarmed at the immense quantity of pulpwood that is yearly cut and shipped to the United States mills. There is a strong pressure being brought to bear upon the Government to place an embargo upon the shipment of this raw material that should be kept at home and here manufactured into paper. It is pointed out that, apart from the privately-owned limits—exploited for production of the manufactured article at the Quebec pulp and paper mills, there is only enough of the wood left in the province for another fifteen years at the rate it is now being cut and shipped to the plants across the border.

New Type of Hydroplane for Patrol Work

George R. Gray, of Sault Ste. Marie, who is woods manager of the Spanish River Pulp and Paper Co., in the course of his evidence before the Ontario Timber Commission in Toronto, made reference to experiments which were made with a hydroplane at the company's limits last year. "We found we had not the right kind of plane," he said, "and this year we are having a hydroplane built which will carry a canoe, bedding, five men and outfit, and a month's provisions."

Mr. Gray said the plane would be used for "cruising" purposes as well as for locating fires. They were able to detect fires last year by the use of the hydroplane.

Aerial Efficiency First Consideration

The Commercial Air Pilots' Association of Canada, whose headquarters are at Camp Borden, Ont., comprises a large majority of the active commercial air pilots of the Dominion. The association recently came into existence for the express purpose of elevating the standard of requirements of commercial aviation both from an equipment and personnel point of view.

G. H. Thompson of Camp Borden, is the secretary of the association, and in writing the "Canada Lumberman" says: I wish to quote an extract from our constitution, and here it is: "The association is to try to uphold a high standard of efficiency and professional conduct so that the fact that a pilot is a member of the association will be a guarantee of his professional ability."

Continuing, Secretary Thompson remarks: "It has come to the attention of a number of our members that certain pulp and paper interests have suffered severe losses during the past season, due mainly to the numerous accidents to aircraft. It is our aim to keep repetitions of such occurrences at a minimum by first making absolutely certain that a pilot holding membership in this association is qualified for commercial work, and second, by asking the co-operation of the industries making use of aircraft, to the extent of making application to this association when in need of commercial pilots."

There are three classes of membership in the association:

1. Senior Member; one holding a commercial pilot's certificate issued by the government, and having had, at least, one season's actual experience in commercial aviation.

2. Junior Member; one holding a commercial pilot's certificate issued by the government, but who has not had one season's experience in commercial aviation.

3. Associate Member; a senior member who has ceased flying for a period exceeding twelve months.

We believe you will at once recognize the importance and value of such an association, and we ask your assistance and co-operation and invite your enquiries.

Price of Pulpwood in Neighboring State

The four leading States in the manufacture of paper in 1914 were: Maine, Massachusetts, New York and Wisconsin. They reported more than one-half the total value of products. In that year 4,470,763 cords of wood were used. Maine led in the consumption of wood with 941,204 cords. New York followed with 894,098 cords. The total tonnage of paper of all kinds was 5,270,047 tons. of which newsprint contributed 20 per cent., says Geo. B. Oberton of Canton, N.Y. Now in regard to the pulpwood business as it applies to New York State and Canada, a certain firm in Canton, N.Y., (owners of timberlands) have a contract for 15,000 cords of mixed wood, spruce, balsam and hemlock, delivered to mill, at $19 per cord. This is hauled to the mill by teams. Wood is quoted at $33 per cord, f.o.b. Watertown, which means the Black River district, in which are located some 29 mills. Remember, there is a long expensive freight haul to figure out of that, which would cut the price down at the point of shipment. Now, my Canadian friends, do not be afraid of American mills running indefinitely on Canadian wood. The expensive freight haul is against it.

How Costs May Be Brought Down

Austin & Nicholson of Chapleau, Ont., who conduct a general lumbering and pulpwood business, say that the prevailing rate of wages for men in the woods in their district is $75.00 to $80.00 a month and board. Some men, who are working by the piece, of course, make much higher wages, as much as $200.00 per month and board, in several instances.

The firm report that it has not been their policy to reduce wages. The position they have taken is that their help was hired and put into the camps at a given rate of wages, and that rate will be paid without reduction provided that the employees do a fair day's work. "If labor efficiency can be restored to a pre-war basis," says Mr. Nicholson, "production costs can be brought down, so that reduced

commodity values may be met without the necessity of cutting wages. This, of course, is one of the problems that has to be solved and will be determined by the general attitude of the working men."

School for Forest Ranger Instruction

Messrs. Piche and Bedard, chief and sub-chief of the Forestry Branch of the Quebec Department of Lands and Forests, returned to Quebec recently from the Pulp and Paper Association convention, held at Montreal. Mr. A. Bedard, assistant to Mr. Piche in the administration of the Forestry Branch of the Department, as well as one of the professors of the Quebec School of Forestry Engineering, in an interview with the correspondent of the "Canada Lumberman," said, "Two of the outstanding features of interest in connection with the convention, was the interest manifested by the delegates in fire protection of forests and the establishment of a Ranger's Shool in the city of Quebec under government auspices for the education of young men to qualify for forest rangers and cutters.

During the discussion in forest fires and their protection against fire, it devolved that though the greatest danger rested with railway operation, the control of which lay with the Dominion Railway Commission, and strange to say that there was a large section of the Transcontinental Railway not subject to the control of this Commission. It was decided that both the Federal Government and the

G. C. Piche, Quebec, P. Q.
Chief Forest Service

Avila Bedard, Quebec, P. Q.
Assistant Chief Forest Service

Railway Commission be approached on the matter and have the Commission take over control and enforce a system of fire protection for the preservation of the forests against the ravages of fire.

In regard to the question of creating a school for the education of young men to become forest rangers, that will be submitted to the Quebec Government for approval, I am inclined to believe that the request will be acceded to, and that the Engineer's School will form part as a branch of the School for Forestry Engineering, which has accomplished much, since its foundation, in technical forestry and research work. During the war, students dropped in number to five, but now we have twenty young men taking the studies.

This school was established in 1910 for the promotion of educational research and experimental work in forestry, in connection with the Laval University of Quebec. Since 1919 it has been amalgamated with the Surveying School and is, therefore, designated under the name of School of Forestry Engineering. Its object is to train foresters not only for the rovincial forest administration but also for private companies engaged in the exploitation of forest resources.

The duration of the curriculum is four years. Every year free tuition is granted to the five successful candidates after a competative examination.

In connection with this school the department carries on a campaign of education in connection with the Canadian Forestry Association in all parts of the province, in order to educate the settlers to take better care of timber lands and assist both the government and the Forest Protective Association in their work of forest protection.

Mr. Bedard was asked if the serious disease that made its appearance a few years ago in balsam fir and threatened its destruction, has as yet had its origin traced. if so, what was the nature of the disease and the remedy to combat the microbe that was just killing and stunting and causing the entire destruction of the trees.

He replied that in 1918 we discovered and mentioned this serious disease of the balsam fir, the origin of which is still unknown and seems to us to be of a physiological nature, as a consequence of the spruce budworm that enters the galleries and corridors and eats the tree to such an extent that they are unfit for lumber. Various reports that we have received in regard to this disease demonstrates that it is making such progress that before long the balsam fir will practically have disappeared from our forests. Mr. J. M. Swaine, of the Federal Division of Entomology has been studying the nature of the disease as well as the ravages caused by an insect of the pabygraphus gender, which has been attacking the spruce. We regret to announce that the white pine blistef rust is extending its ravages, but so far has confined its attack in the United States. It has, however, been found on the south shore of the St. Lawrence west of Quebec, also in the central plain of the north shore as far as the port of the Laurentians.

The white pine weevil is another insect that threatens to do great harm to young white pine plants. This matter is also being studied by Mr. Swaine. In the meantime the Forestry Service has been giving great attention to these diseases, and has contributed in certain sections to check their spreading.

Artificial Regeneration

In recent years beginning from 1908 the Government has established at Berthierville, P.Q. a forest nursery for the regeneration of waste lands and the restocking of unwisely exploited areas. This nursery has for reforestation purposes supplied up till now some 3,000,000 trees of various species. It has an actual stock of 4,000,000 trees, a certain number of which was raised in the nursery is given away to schools and colleges with the object of promoting a campaign for tree culture. The bulk of them has, however, been used for reforestation purposes, the reforestation work being carried out either by lumber companies or by the Government.

It might be said that great success has been obtained in reforestation work with such exotic species as the European larch the Norway spruce and the Scotch pine. Through the bull pine (pinus ponderosi) New Austrian pine European walnut, black walnut, common alder and other foreign species have been cultivated. We have not as yet obtained results that would justify us in expressing conclusions.

New Railway Will Tap Rich Resources

The syndicate of British and New York capitalists interested in the building of the Quebec and Chebougamou Railway from Lake Misstassini via Chicoutimi to Quebec in connection with the development of the timber and mineral resources of the northern timberland of the province of Quebec, as well as the Ungava territory, have in mind a far bigger project under consideration than the Canadian public has any idea of, and in the near future will come as a revelation to the business world. The gigantic project in question is the outcome of years of study and practical exploration since 1917 by parties of civil engineers, geological and mineralogy students, who, in the unpublished reports, recount unlimited possibilities in wealth of forests, immense water powers and minerals.

The syndicate above mentioned, with a capital of $500,000, in its initial organization. held a meeting in New York City lately to map out a plan to be put into execution this coming summer and start the practical work of construction for development. Though the meeting was held in camera and nothing given out for publication, it is learned through authoritative channels that a concrete plant submitted by the engineers, has been adopted and carried to England by Capt. Eastman, to receive the approval of the British financial interests who form part of the syndicate. It is said that the project includes the building of a net of branch railways to communicate with the Quebec and Chemougamou Railway at Lakes St. John and Misstassine, and will encircle the whole of the northern timberland and Ungava, and have an outlet at the northeast point of Labrador that will secure a short sailing distance of three days for steamers carrying freight to reach England. It will also include a connection between the Labrador and the Hudson Bay straits and the Hudson Bay Railway and the province of Alberta by railway connection, as well as the operation of a line of steamers from Quebec to the Labrador and northern sea waters to the Hudson Bay.

Will Change Into Two Departments

The Quebec Government announces that it is proposed to divide the Lands Department from the Forest Department. Premier Taschereau in making the announcement, stated: "If the Government is willing to give the true colonist all possible assistance, even spending much money to aid him, I can assure the House that the fake colonist, the man who pillages forests, will be treated without mercy. The man with a timber cutting license, who respects the law and forestry regulations, is one of the best factors in our industrial growth. He has a right to our protection and it is not just that he should be plundered in his limits by an alleged colonist."

Adams Gasoline Alligator Pointers

Lumbermen find it quicker and easier to work with an Adams Pointer. It is a powerful and efficient gasoline boat that has given satisfaction to the lumber industry throughout the Dominion.

Adams Pointers are made by expert workmen at Penetang. They are easier and safer to use than alligators and tugs. They have a well built, easy running engine and a powerful reverse gear towing winch that render them equal to the heaviest work.

An Adams Pointer should be included in your equipment. Send for further particulars and blue prints, which will give you full details.

16 H. P. Adams Pointer complete with winch and reverse gear.

Adams Engine Co., Penetang, Ont.

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

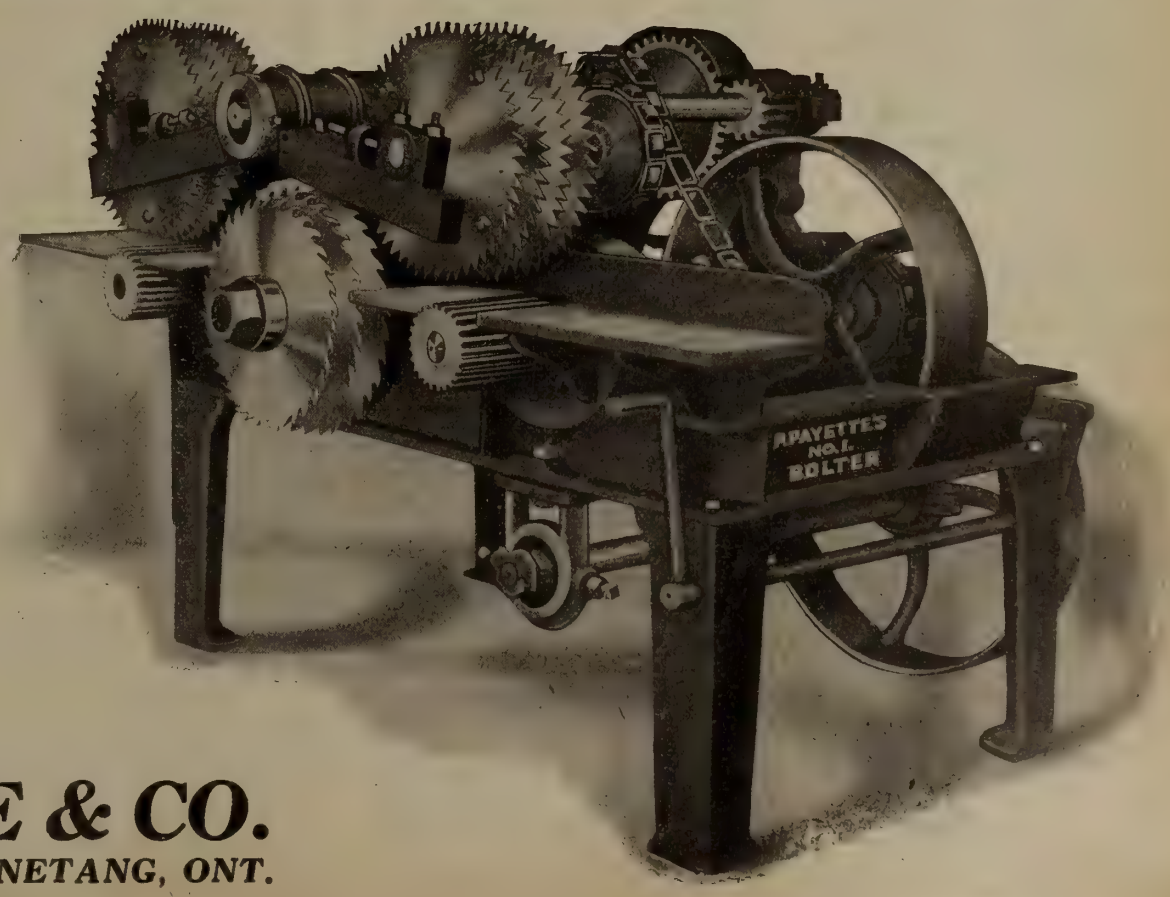
Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ⅜ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?



P. PAYETTE & CO.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

WANTED DRY BIRCH—Quote best price for immediate shipment on one hundred thousand feet four quarter No. 3 Common, Dry Birch. Box 483, Canada Lumberman, Toronto. 4

Wanted

In car load lots, Maple, White Birch and Beech strips 1¼" x 3¼" x 18" and upwards in length. For further particulars apply to Box 479, Canada Lumberman, Toronto, 4t.f.

Wanted Lath

Prices on Hemlock, Pine and Spruce lath; delivered Detroit rate. Brewster Loud Lumber Co., No. 1307 Majestic Bldg., Detroit, Mich. 3-8

Wanted

ROCK and GREY ELM 3¼" thick suitable for bending purposes.
Quote prices to
The St. Marys Wood Specialty Co.,
1-4 St. Marys, Ont.

Wanted To Buy

WANTED to buy Pine, Basswood, Spruce, Hemlock, mill run, culls out. Will pay good prices for Rock Maple and Elm logs, of our specifications. Terms cash. Log Export & Import Company, 241 Beaver Hall Hill, Montreal, Que. 4

Wanted—Timber Lands

Large or small tracts of softwoods and hardwoods in Ontario. Address Lock Box 262, Sault Ste. Marie, Ont. 4-7

Wanted

15,000 No. 1 railway ties. Can be supplied in Cedar, Jack Pine, Tamarac, or Hemlock. Must be up to standard specifications. Also 2,000 No. 1 railway cross and section ties in hardwood. State what you can supply, giving point of shipment and when shipment can be made, with prices for each kind. Box 478, Canada Lumberman, Toronto. 4t.f.

Lumber For Sale

For Sale

One carload cheese box veneer. C. A. Moses, Osgoode Station. 3-4

FOR SALE—3000 Cords of Mixed White Birch and Tamarac, ready for shipment 10th December, 1920, at Stone Siding, A.E.R., 28 miles west of Sudbury. For further particulars apply to C. G. Hyett, Worthington, Ont., Soo branch C. P. R. 24-5

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 6-t.f.

Cedar and Maple

We offer at attractive prices two cars cedar squares 6 x 6, and 4 x 4 running largely 16 ft. long. 2 cars 1" and 2" cedar edged; 2 cars 1" hard maple No. 1, 2 and 3 Common.

Peterborough Canoe Co., Limited.,
4 Peterborough, Ontario.

For Sale

34,000 ft. 1 in. No. 1 Com. and Btr. Basswood
33,683 ft. 2 in. No. 1 Com. and Btr. Basswood
30,000 ft. 1 in. No. 1 Com. and Btr. Elm
22,000 ft. 2 in. No. 1 Com. and Btr. Elm
17,000 ft. 3 in. No. 1 Com. and Btr. Elm
57,000 ft. 1 in. Nos. 1, 2 and 3 Com. Elm
17,000 ft. 1 in. Nos. 1, 2 and 3 Com. Ash

3-4 18 Toronto St., Toronto, Ont.

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Machinery Wanted

WANTED—Two heavy log or lumber trucks. Box 257, Canada Lumberman, Toronto. 11-t.f.

WANTED—A second-hand light double edger; state price. Gordon B. Hallman, Petersburg, Ontario. 4

WANTED. Good second-hand log truck; must be in good condition and cheap for cash. St. Marys Wood Specialty Co., Limited, St. Marys, Ontario. 4

WANTED; 1 only six saw edger. Must be in excellent conditions. Also one circular saw grinder. Give name of manufacturer and price in first letter. Apply Box 459, Canada Lumberman, Toronto. 3-6

Machinery For Sale

For Sale—Locomotive

One 28 Ton 3 Cylinder 8 x 10 Standard Gauge Lima Geared. Located in Canada.
Box 376, Canada Lumberman, Toronto, Ont.
19tf

For Sale

1 four-saw Filer & Stowell edger, 1 ten-inch steam feed, complete with valves and piston rod, 1 used Waterous carriage, 1 friction clutch coupling, 14 in. diameter, 3 7/16 in. bore. Apply Bishop Lumber Co., Ltd., Nesterville, Ont. 3-6

For Sale

500 to 600 h.p. Harris Twin Corliss Engine, drive pulley 18 ft. dia. x 52 in. face; also main drive belt 90 ft. long; complete with or without condenser; will sell cheap before moving. Laurie Machinery Co., Ltd., 335A Craig St. W., Montreal, Que. 3-6

For Sale

No. 6 Linderman Automatic Dovetailer and Glue Jointer, heavy 4-side planer and matcher, 12-inch moulder, 4-side sash and door moulder, shaper, jointer, trim saw, power feed saw, planer, drum sander, band saw, other machinery. A J. Lindsay, 42 Gloucester St., Toronto. 3-6

For Sale

Waterous Big Champion Edger for six saws, Waterous Log Kicker 10 inch cylinder with arms all complete, Waterous Ratchet Set works, Two single bevel friction live roll drives complete. For further information apply Conger Lumber Co., Ltd., Parry Sound, Ont. 22t.f.

Wickes Gang

GANG: No. 12 Wickes Gang, 40" sash, 15" stroke, steam binder rolls, front and back in two sections, feed and oscillation combined, 1908 model, and has been in use for five years. We furnish with this gang 11 rolls for cants and stock, one filing machine, and 4 sets of saws.

THE PEMBROKE LUMBER CO.,
1t.f. Pembroke, Ont.

For Sale

One 10-inch four sided moulder; also one planer and matcher. C. A. Moses, Osgoode Station. 3-4

For Sale

One 100 H.P. engine, slide valve, in good condition. One 75 H.P. boiler, 75 lbs. steam, good condition. One smoke stack, 36" x 65', good screen on top, all good repair. Kindly give us a price. Box 476, Canada Lumberman, Toronto. 4-7

Second Hand Machinery

We have over $250,000 worth of used machinery of all kinds for sale. Suitable for mines, quarries, railroads, pulp and lumber mills, etc.

Everything carefully overhauled at our shops before shipped.

Send us your inquiries.

R. T. GILMAN & CO.,
19tf Montreal.

MILES' BARGAINS

Wickes Gangs, 44", 40", 36", 26".
8' Garland band resaw.
8' Allis band mill.
7' Prescott band resaw.
Fischer slab resaw.
54" Mershon band resaw.
42" Invincible Sander.
No. 3C Mitts-Merrill hog.
Single band mill outfit complete.
3—72" x 18' 125 lb. Boilers.
500 KVA. Turbo generator, 480-60-3.
275 H.P. slip ring motor, 240/440-60-3.
20 x 42 Corliss engine.
1500 gal. Worthington fire pump.
14 x 14 x 16 Chicago air compressor.

MILES MACHINERY COMPANY,
1-4 Saginaw, Mich.

I Offer for Quick Shipment the Following Machines

Subject to Prior Sale

Please give me an inquiry if you do not find the machine you want among those listed below, as I have about one hundred additional woodworking machines of various types.

American 30" x 12" 4 Side Timber Sizer and Matcher.
4 x 7" Berlin No. 89 Hardwood Flooring Planer and Matcher.
15 x 16" 77-B American Fast Feed Planer and Matcher with double profiler.
Berlin 30" x 6" No. 182 Fast Feed Double Surfacer.
American No. 229 Hardwood Flooring Machine.
American No. 22 Planer and Matcher.
Hall & Brown 12" 4 Side Moulder.
10" Hermance Wide Open 4 Sided Sticker.
Greenlee Bros. 6" 4 Side Sticker.
6" C. B. Rogers 4 Sided Moulder.
American 10" Moulder.
Berlin 10" No. 118 Inside Moulder.
200 Prs. Moulding Knives Ground to Shape.
Mershon 44" Band Resaw.
Connell & Dengler 60" Band Resaw.
44" Circular Resaw.
Circular Saw Mill Hoosier Pony.
American No. 1 Band Rip Saw.
Rogers 40" Circular Saw Sharpener.
Simplex Double Belt Edge Sander.
30" Brand New Clarage Fan.
E. B. Hayes Dowell Gluer and Driver.
E. B. Hayes Dowell Rod Machine.
E. B. Hayes Dowell Power Door Clamp.
Buss Machine Works 30" x 7" Single Cabinet Planer.
12" x 24" Jointers or Buzz Planers.

C. J. ANDERSEN,
e.o.i.-t.f. 15 W. Swan St., Buffalo, N. Y.

Situations Wanted

SAW MILL ENGINEER wants employment for coming season. Can do all own repairs on engine or boilers. Go anywhere. R. Cornthwaite, 213 Dease St., Fort William, Ontario. 4-7

Circular filer wants position for coming season. Best of references. Will go anywhere. Box 474, Canada Lumberman, Toronto. 4-6

Sawmill foreman open for coming season. Good millwright on installation of machinery or repairs. Twenty years' experience in saw, pulp barker and paper mills. With good recommendations. Box 490, Canada Lumberman, Toronto. 4-5

WANTED

to commence work April 15th, a sawyer, for a left-hand circular mill, gunshot feed, steam nigger and loader. Box 464, Canada Lumberman, Toronto. 3-6

Well educated you man desires position, having good experience in wholesale and retail lumber business, and understands grading, also has done considerable selling; and can furnish the best of references. Box 481, Canada Lumberman, Toronto. 4

Young man, 27, several years' general office and accounting experience, desires employment in lumber camp, preferably where his duties require him outside, such as scaling and working in the bush. Box 432, Canada Lumberman, Toronto. 1-4

WANTED: Permanent position by young man who desires to better his position with lumber firm. Four years' woodworking office experience. Like place where he could handle some of the correspondence. Excellent references. Box 492, Canada Lumberman, Toronto. 4

Experienced millwright and lath mill contractor open to contract to cut lath by M. Twenty-five years' experience cutting lath, pickets and basket bottoms. Have good rerences from the companies for whom I have worked. Box 489, Canada Lumberman, Toronto. 4-5

Young married man, 24, sober, both languages, five years' experience, desires employment with a lumber firm, preferably where he will travel, such as scaling and shipping lumber and pulpwood. Will go anywhere in Quebec or Ontario. Can furnish good references. Box 446, Canada Lumberman, Toronto. 2-4

Situations Vacant

ENGINEER WANTED—Engineer qualified to take charge of sawmill power plant, only competent man need apply, duties to commence immediately. Box 484, Canada Lumberman, Toronto. 4

WANTED

Sawmill men, filer, sawyer, setter, lath sawyer, edger and trimmer men. Apply Box 491, Canada Lumberman, Toronto. 4-9

WANTED.—Left hand band sawyer, single cut; one who has had experience in hardwoods preferred. Also one setter (steam set works). For mill in Ottawa Valley. Steady work. Apply Box 488, Canada Lumberman, Toronto. 4-5

STENOGRAPHER—Wanted immediately for Quebec office expert male stenographer who has had at least three years' lumber experience, must be quick and accurate at figuring lumber and making and checking invoices. Apply Knox Bros., Limited, Drummond Building, Montreal. 4

WANTED: Chief Draftsman by concern manufacturing very extensively, Sawmill and Pulpmill Machinery, Boilers, Engines, etc. Only those with suitable experience need apply.

Waterous Engine Works Company, Limited,
2-5 Brantford, Ontario.

WANTED—One first class band sawfiler for a double cut mll, cutting all white pine stock. Apply to Box 475, Canada Lumberman, Toronto. 4-7

WANTED: At once—Capable man with sawmill to cut one million feet mixed timber. Apply Seneca Lumber Co., c/o Percy E. Heeney, Kitchener, Ontario. 3-4

ACCOUNTANT—Wanted immediately for Quebec office an expert bookkeeper who has had at least five years' lumber experience. Must be thoroughly familiar with every branch of lumber accounting. Apply Knox Bros., Limited, Drummond Building, Montreal. 4

WANTED—Thoroughly experienced sawmill men for large, fast mill, for coming season, including foreman, millwrights, band saw filer, sawyers, setters and trimmermen. Only thoroughly experienced and capable men need apply; state age, experience and wages expected. Address 460, Canada Lumberman, Toronto. 3-6

Wanted—Sawmill Man, also Logger

Who can each invest or form a pool of ten thousand dollars to buy timbered land with Atlantic tide water frontage at ninety-five cents to two dollars per acre and join a lumbering and farming enterprise on a salary in Central America, this side Panamal Canal. Transportation from stump to Eastern U. S. seaports is less than any U. S. stumpage west of Florida. Woods classed as Cabinet Wood by U. S. government should be shipped in log to save duty, balance sawed there. Stumpage will not cost thirty cents per thousand, land free. Stumpage begins at the sea. Want to plant land as fast as timber is cut. Have farmed there, destroying timber to plant land.

H. W. Baxter, 258-3rd St., Niagara Falls, N. Y. 4

Business Chances

A Planing Mill with complete machinery; small stock of lumber; favorable yard lease, with plenty room, well located in Toronto, for sale, terms to suit. Box 480, Canada Lumberman. 4

FOR SALE.—Retail lumber yard, saw and planing mill, good business established for 20 years, in an excellent village of Southern Ontario. Would sell sawmill separate. R. S. Robinson, Waterford, Ontario. 4-6

Manufacturers, Attention!

The best location in Northern Ontario for sale, suitable for the manufacture of Fruit Barrel staves and heading, Fruit Boxes, Fruit Baskets—in fact wooden containers of all kinds; abundance of timber. Would sell outright, or would form company and take bulk of sale price in stock. Apply in first instance to Box 456, Canada Lumberman, Toronto. 3-4

Wanted

Wood working industries for the Town of Massey, Ont. 1,000 population. Gravity water system. Situate junction of Sable and Spanish Rivers. On C. P. R. Soo line 58 miles west of Sudbury. Unlimited Raw Material for Box Lumber, Veneer and Hardwood Workings. Telegraph and local and long distance telephone service. Four passenger trains daily. Ideal building sites. Unlimited water power awaiting development. Three water powers within the town limits.

Interested parties communicate with Board of Trade for further information regarding concessions on taxations, water supply and building sites.

A. A. HALLETT,
4-7 Sec'y. Board of Trade.

Lumber Property For Sale

About 8,000 acres (held in fee) of lumber lands estimated to contain about 30,000,000 sp. feet of merchantable soft wood.

As a pulp wood proposition, this property should contain 60,000 cords or more.

Included with the lands, is a saw mill, equipped with Dutch furnaces, Waterous edger, planer and lath machine, and situated along the line of the C. N. Railway, the port lies within three miles of the mill, so that water shipments may be made as well as rail.

All the lands are within easy distance of the river, and stream driving does not exceed a distance of more than six miles.

For further information apply to

E. A. SMITH,
23t.f. Shediac, N. B.

For Sale—Pulpwood Rights

We control several high-class freehold properties on rivers entering into the Atlantic Ocean, containing large quantities of Spruce Pulpwood. We would sell outright, or stumpage rights and agree to deliver the wood on vessels. Address Box 458, Canada Lumberman, Toronto. 3-6

Pulpwood 1921-1922

Firm in Northern Ontario is in a position to offer from 20,000 to 40,000 cords Spruce pulpwood yearly, both Winter and Summer delivery, for a number of years. Also large quantities of Poplar pulpwood. All exportable. Would consider proposition as Agents for U. S. Mill. References.

Apply Box 470,
c/o Canada Lumberman,
Toronto.

For Sale

Planing Mill on Canadian National Railway Lines, between Levis and Mont Joli, doing a Milling In Transit business, working night and day, with work ahead, guaranteed for several months at profitable prices. Fully equipped with planer, sticker, ripper, re-saw; handling several cars daily, with siding capacity of five cars, which is shortly to be extended to nine cars capacity; right in the heart of lumber section where more than ten times mill's capacity has been refused due to over-taxing of mill. Mill built of cement with cement floor, with additional buildings for Sash and Door Factory or Box Factory attached, and sheds for piling, also with piling ground for around half of million feet of lumber. Sellers will guarantee work several weeks ahead. Price $30,000.00, on terms that will be satisfactory. A live man or group of men can easily clean up $20,000.00 a year net profit, and mill can be extended for increased business very easily up to ten cars per day. Principals only. If interested write to Box 430, Canada Lumberman, Toronto, Ont. 24-4

Miscellaneous

TENDERS FOR PULPWOOD and TIMBER LIMIT

Tenders will be received by the undersigned up to and including the **15th day of June, 1921**, for the right to cut pulpwood and pine timber on a certain area situated on the Nagagami River and other territory adjacent thereto, in the District of Algoma.

Tenderers shall state the amount per cord on pulpwood, and per thousand feet, board measure, on pine, that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for spruce and 40 cents per cord for other pulpwoods, and $2.50 per thousand feet, board measure, for pine, or such other rates as may from time to time be fixed by the Lieutenant-Governor-in-Council for the right to operate a pulp mill and a paper mill on or near the area preferred to.

The successful tenderer shall be required to erect a mill or mills on or near the territory and to manufacture the wood into pulp and paper in the Province of Ontario.

Parties making tender will be required to deposit with their tender a marked cheque, payable to the Honourable the Treasurer of the Province of Ontario, for fifty thousand dollars ($50,000), which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said $50,000 shall remain on deposit until the pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation the deposit of $50,000 may be applied on account of bonus dues as they accrue, but the regulation dues, as mentioned above, shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelope and marked plainly on outside, "Tender for Nagagami Pulp and Timber Limit."

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, January 24th, 1921.

N.B.—No unauthorized publication of this notice will be paid for. e.o.i.-4-11

Sale of Timber

Tenders will be received by the undersigned up to and including **Saturday, the 5th day of March, 1921**, for the right to cut timber in the Township of Childerhose, in the Porcupine Mining Division in the district of Temiskaming.

For further particulars apply to the undersigned, or to Mr. W. G. A. Wood, Crown Timber Agent, South Porcupine, Ontario.

BENJAH BOWMAN,
Minister of Lands and Forests.
Toronto, February 1st, 1921. 4-9

PROVINCE OF QUEBEC

Leasing of Water Powers and Timber Limit

Notice is hereby given that on **Wednesday, June 1st, 1921**, at 10.30 a.m., in the sales room of the Department of Lands and Forests, at Quebec, the following will be offered at public auction:

1. Different water power sites on the Megiscane and Bell Rivers, in the County of Temiscamingue;

2. A timber limit 400 square miles in area in the projected township of Louvicourt, Narrias, Tiblemont and Vauquelin, in the upper part of the Bell River watershed.

For fuller details and information please apply to the Department of Lands and Forests at Quebec.

ELZ MIVILLE DECHENE,
e.o.i.4-10 Deputy Minister.

TENDERS FOR PULPWOOD and TIMBER LIMIT

Tenders will be received by the undersigned up to and including the **4th day of July, 1921**, for the right to cut pulpwood and pine timber on a certain area situated in the vicinity of Long Lake, District of Thunder Bay.

Tenderers shall state the amount per cord on pulpwood, and per thousand feet, board measure, on pine, that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for spruce and 40 cents per cord for other pulpwoods, and $2.50 per thousand feet, board measure, for pine, or such other rates as may from time to time be fixed by the Lieutenant-Governor-in-Council, for the right to operate a pulp mill and a paper mill on or near the area referred to.

The successful tenderer shall be required to erect a mill or mills on or near the territory and to manufacture the wood into pulp and paper in the Province of Ontario.

Parties making tender will be required to deposit with their tender a marked cheque, payable to the Honourable the Treasurer of the Province of Ontario for fifty thousand dollars ($50,000), which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said $50,000 shall remain on deposit until the pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation, the deposit of $50,000 may be applied on account of bonus dues as they accrue, but the regulation dues as mentioned above shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelope and marked plainly on outside "Tender for Long Lake Pulp and Timber Limit."

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, January 24th, 1921.

N.B.—No unauthorized publication of this notice will be paid for. e.o.i.-4-13

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

Review of Current Trade Conditions

Ontario

Conditions in the Ontario market show a considerable improvement since the last report, and while no large sales are being made, there are more inquiries, and as spring approaches, trade is opening up more promisingly. It is a little early yet to hazard predictions regarding what is likely to eventuate during the latter part of March and April. Much will depend upon building prospects and the attitude of labor and whether supplies in other lines of building requisites come down in consonance with the trend of lumber. Many things seem favorable at the present juncture, but there are so many slips between predictions and realizations in these days of ups and downs in demand, that no accurate forecast can be made.

January was a very fair month with the majority of firms, as retailers sorted up a great deal of stock and are content to let matters rest there until they know what the demands from the farmers will be and also what new projects in the structural line will be undertaken in their own towns and villages. Many more carloads of V jointing, boards of all kinds, shiplap, and dressed finish from B. C. were disposed of than for several weeks previous. Everything in this line has been moving a little ,which is an encouraging sign, although prices are not in any way stabilized. The demand for dimension and timbers is limited, while shingles are decidedly quiet.

Hemlock is still being sold at slashed prices and white pine took a slight drop in some grades. It is reported that on spruce quotations have also declined rapidly, and mills, which are offering their cut in 1921 are anxious to make sales to several firms, owing to the rather uncertain outlook for export.

It is a little too early yet to figure on what the prices of cuts for the coming year will be, but for box and better in white pine, it is rumored that the prevailing quotation will be from $5.00 up less than last spring, and on hemlock from $5.00 to $15.00, according to the grade and location and quantities available.

In the hardwood line there is a brightening up in some spots, but generally speaking, not much is being sold at the present and things are in a mark-time condition. Considerable will depend upon the activity of automobile factories, furniture plants, musical instrument works and agricultural implement companies during the coming season.

In woods operations satisfactory progress is being made, but operators declare that the cut this year is going to cost them practically as much as last season in spite of many reports about great reduction in wages and supplies.

"It is simply amazing," declared one manufacturer this week, "the number of misrepresentations so far as lumbering conditions are concerned, and the lack of knowledge on the part of those who should know better. All this talk about wages being generally cut is largely a myth. The majority of our men went into camps at a certain figure, which was from $5.00 to $10.00 higher than last year. We have to pay them this right through, and there was no sign of reduction until December, and even then any decreases applied only to new men who came on. Our supplies were bought so far ahead that we could not cash in on the benefits of any reduction until very late in the season. Everything connected with the operation of the camp is practically as dear as it was last year, so far as the major requirements are concerned, and to think because a few lines of commodities have been reduced, or a certain decline in wages has gone into effect that the lumberman instantly and automatically benefits, is a far-drawn supposition. Many of the logs that are being taken out this year will, as every lumberman knows, not be cut until 1922, so that reduced costs of production, if any, will not be experienced in this year's output.

"If the cost of 1921 lumbering is to decrease any, it will have to be brought about in reduced wages on the drives, the towing and around the mill and yards. Personally we do not believe there will be any very material reduction. It looks as if both rough and skilled labor is going to cost equally as much as in 1920."

Great Britain

The market with regard to American hardwoods shows no signs of improvement, says the Timber Trades Journal. Values are still on the decline, and many merchants are holding off from buying in the hope that prices will go lower.

It will be a difficult matter to determine when the market has reached its lowest limit, because the rate of exchange is now beginning to react in our favor, and almost every week there is a change for the better. This is as it should be, and one of the principal factors towards bringing trade back to the normal will be, when the rates of exchange return to the normal. So long as dollars, francs and marks show such a disparity between the value of the pound sterling, and to the value obtaining before the war, the general conditions under which trading is pursued will remain difficult.

There can be no prospect of business resuming its normal course until the monetary value for each country has fully recovered its former pre-war status. We all look forward towards more prosperous times in the future, and no matter what the pessimists say the general opinion in the timber trade here seems to be in favor of taking a more hopeful view of the future. At any rate, indications point to greater prosperity when normal conditions prevail once more.

There is a good basis of trade in Great Britain, and the prospect of an increase in the volume of business, but all facts now seem to point to a lower level of values. Importers are, therefore, determined not to be tempted to fresh buying, but to wait off until a larger part of their present holdings are cleared. While, therefore, as far as prices are concerned, there is nothing favorable to report, there is a more confident tone in the market, and the future is not quite so obscure. Further realizations of stock below cost price are quite probable, but this is the inevitable outcome of over-trading and speculation. Such a state of affairs can only be of short duration, and provided the present policy of importers is continued until the stocks in this country are greatly reduced, the market for the coming season should open in a satisfactory manner, and on a level of values which should enable a steady and profitable business to be done.

While a better tone prevails in market conditions generally, there is as yet no improvement in the prices for common quality spruce. The supplies of this wood are still too ample, and stockholders are too anxious to quit. 7-in. and up St. John's spruce is being offered from the Manchester district at £27 and 27£ 10c. per standard, and there is no dearth of wood at this figure. Quebec spruce is not so plentiful, and is not being pressed on the market, while quotations are considerably higher. There is evidently not much hope for a revival in prices for common spruce just yet, as stocks in the country are large, and the possible auctions of the wood in the hands of the Associated Importers will affect prices for some little time to come.

United States

The United States Congress has now under serious consideration the conservation of the forest resources of the United States, by the introduction of a bill known as the "Smith bill" in the House of congressional representatives. Hearings have been arranged and public support asked for the legislation, in order that the nation may establish a definite forest policy, which will effectively provide for an adequate and continuous supply of timber from Federal, State and privately owned forest land. These conclusions have been arrived at by the lumberman and timberland owners after a more or less fragmentary and spasmodic consideration of the question of a national supply which had been going on for thirty years, during which time the most important report was that of the National Conservation Commission in 1908. It was given added impetus in 1919 by the their chief forester, Col. Henry S. Graves, who participated in a series of countrywide conferences with lumbermen, timberland and forestry organizations, state officials and other interested parties in the United States. This was followed by the present chief forester, Col. W. B. Greeley, on June 1st, 1920, who definitely outlined the national legislation in response to Senate resolutions needed for the consolidation and extension of federal forest holdings and for co-operation with the state in fire prevention and forest renewal. In the meantime, measures having the same end in view, but somewhat different in character, have been suggested by the American Paper and Pulp Association, the Association of Wood Using Industries and other organizations, while the American Newspaper Publishers' Association of the United States appointed a committee on National Forest Resources to study the various measures proposed.

The final result of these several steps in the same direction was a conference in New York, at which a unanimous agreement was reached on all essentials of the comprehensive policy set forth in the Snell Bill (H. R. 15327) and the authorization of the National For-

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

estry Programme Committee to further study the various measures proposed.

The following is an outline of the Snell Bill:—

Provides forest protection and renewal in co-operation with states and other agencies.

Federal expenditures for this purpose not to exceed expenditures by the co-operating state.

Directs survey of forest resources and timber requirements of nation.

Appropriates $2,000,000 yearly for five years to carry out provisions 1, 2 and 3, of which $1,000,000 must be for forest protection.

Appropriates $1,000,000 yearly for five years for forest research and investigations in wood utilization including study of forest taxation.

Appropriates $1,000,000 yearly for five years for reforestation of denuded lands in national forests.

Appropriates $10,000,000 year for five years for acquiring additional land for national forests.

Defines procedure in purchase of lands suitable for forest production.

Authorizes acquisition of similar lands by exchanges of land or timber, when clearly in the public interest.

Provides for classification of other public lands which are valuable chiefly for timber production or watershed protection, and appropriates $250,000 yearly for five years for this purpose.

Provides for addition of such lands to national forests upon recommendation of National Forest Reservation Commission.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Demand Has Quickened Some in Montreal

Conditions in the Montreal market have not changed to any extent. Demand is still slow, although it has quickened a little since a month ago. An encouraging sign is the increase in inquiries, showing that the state of almost absolute stagnation which at one time prevailed is passing.

In spite of the comparative lack of business, there is a general belief that trade will soon pick up. If any reliance can be put on the judgment of architects and contractors, Montreal and the province will see a pronounced revival in building. The acute shortage of houses has been taken advantage of by owners who have raised rents, sometimes to very high figures, throughout the city. It is probable that this action, which is, of course, unpopular, will result in a large number of houses being constructed. In certain directions the cost of materials has declined, and it is expected that labor will be slightly cheaper. But even if costs keep at the present level, the rentals which will be obtained in May will be sufficient to give a very satisfactory return on invested capital. Although the provincial government is not favorable to the idea of a loan of $20,000,000 for workmen's houses, the committees, who have the matter in hand, are still at work on a scheme, and hope to persuade the Government to do something to relieve the situation.

For the month of January the building permits for Montreal totalled $353,225, as compared with $227,655 for the corresponding month last year.

It is too early to say anything definite as to exports to the United Kingdom. At present, it looks as if the season will open very slowly owing to the poor market on the other side and the heavy stocks there. The exports last season totalled 109,355,497 feet, a decrease of 35,020,285 feet as compared with 1919.

Exports of pulpwood, pulp, and paper during December all showed substantial increases. Pulpwood sent to the United States totalled 172,024 cords of a value of $2,621,081, as compared with 46,747 cords, valued at $480,609 in the corresponding month. For the nine months of the fiscal year the exports amounted to 1,087,360 cords, valued at $14,125,577, compared with 678,688 cords, valued at $6,802,209, for the corresponding months of 1919, and 1,205,455 cords, valued at $11,593.228, in 1918. In December the total gain in pulp and paper was $4.813,711, of which paper accounted for $2,424,784, chemical pulp $1,280,227, and mechanical pulp $1,108,700. The United Kingdom continues to be a good customer for pulp, although the United States are the chief buyers. For the nine months the total gain of the three commodities was $58,491,087.

Conditions Remain About the Same in Quebec District

There is very little change in the lumber business, and the prospects up to the present are no brighter than they were one month ago. Advices from the United Kingdom are not very encouraging; nevertheless the Quebec trade is not pessimistic. There is also no change in the pulpwood business, in regard to activities, and the exporters of the wood to the United States mills say the situation is identical with what it was two months ago. The mills are certainly not buying, and exporters cannot quite understand the reason. In the meantime, the farmers have stopped cutting the wood and have no intention of resuming until the recent drop in prices improves. The American mills are buying large supplies of pulpwood from the state of Maine, where the forest resources of that state are being cut down without the least restriction on account of the havoc being made there by the budworm, which no doubt is the cause for the stagnation of activities in the district of Quebec.

Having heard that the forest resources in the state of Maine were being exploited wholesale for the production of pulpwood, the Quebec correspondent of the "Canada Lumberman" made inquiries and found the story to be absolutely correct. It appears that the entire forest resources of Maine are being destroyed by the budworm, and it was only a matter of time when the trees would become useless and the cut unmarketable. This decided an immediate action for the cutting down of the trees, covering an area of over 200 miles. The attention of Mr. Piche, chief forester of the Quebec Department of Lands and Forests, was called to the foregoing story. He said he was well aware that all the forest areas in Maine were being cut for the production of pulpwood on account of the ravages being made by the budworm, and added that Quebec had the same danger to contend with. Many millions of cords of pulpwood were cut last season on burned limits. People had no idea of the danger that existed from the budworm, and "out of that cut we salvaged all we could, and the rest was burned." "The department," said Mr. Piche, "is insisting that the lumbermen used damaged balsam and have reduced the diameter limit on balsam. We have saved a good deal of cutting in many sections in order to concentrate the cutting on damaged balsam where killed timber is located. About 40 per cent. of the wood cut in the province has been balsam and burned timber."

In the year 1920 approximately 3,500,000 cords of pulpwood were cut in Canada, and about 1,500,000 exported, Quebec supplying 1,250,000 cords, which shows a tremendous loss of raw material leaving the country to swell the finished manufactured products of the United States and elsewhere, which should be kept in Canada to feed Canadian paper and pulp mills.

The changes in departmental regulations in Quebec have been made to prevent the cut from Crown Lands, and cause the pulpwood operators to buy extensively wood from private lands. Canadian mills will buy close to one and a half million cords of the 1920 cut, and in 1921 the purchase in the province may be higher.

The cut on private lands at Quebec will be almost as great as upon Crown lands in 1909, when the cut on the Crown Lands was 1,055,358,731 ft. b.m. and on private lands 985,961,355 ft. The people claim that the lumbermen were completely destroying the forests on lots prior to their sale to the settlers. This cause of complaint will, it is hoped, be obviated in regard to pulpwood cutting, with the change to take place in the administration, when the forest lands will come under the Colonization Department.

It is not thought that the Government will introduce the bill for the changes in the Departments of Lands and Forest Colonization that will control of all lands or lots sold to settlers to the Department of Colonization will not be ready to come before the House for legislation until the end of February. As already pointed out in these columns, the proposed legislation will in no way discriminate against the timber and lumber interests.

In the past the Department of Colonization sold all lots to settlers, and this conflicted with the Department of Lands and Forests by the fact that the first-named department often sold lots to settlers owned by limit holders, or later were auctioned off, when it was discovered later that the Department of Colonization had privately sold parcels of these limits to settlers. It is to avoid these mistakes and confusion attending them, as well as losses to the Department of Lands and Forests, that the changes are to be. But herein lies a grave danger and the Government is taking every means to guard against the entry of the bogus settlers who obtain settlers'

lots for no other purpose than to exploit the timber. These gentlemanly human woodpeckers, who have been watching for the changes laid down in the Government measure, have already begun to sharpen their axes, and after grabbing all the lots they can, cut down the timber and then desert the land ot seek new fields.

Premier Taschereau and his cabinet colleagues are well aware of the tricks of the bogus settlers, and their influence over a portion of the rural members of the legislature, and are taking every precaution to guard against all such dishonorable contingencies. Judging by the knowledge in the possession of the Government and its determination to frustrate the nefarious plans of the schemers, the bogus settlers will sharpen their axes in vain.

Intelligent Machines and Ignorant Operators

By Richard Newbecker

When new equipment is installed in any plant it is frequently left to run itself, is sadly neglected or placed in the hands of an incompetent operator. Then if anything goes wrong, the machine is blamed for not being nearly as efficient as the maker or the salesmen represented it to be. There seems to be a growing disposition to censure the manufacturer or his project for many ills which should not to be laid at his door. As the manufacturer is generally located some distance away, he becomes an easy prey in case of any difficulty in a new outfit.

However, if every little cause for trouble with new equipment, and especially with equipment of national reputation, would be carefully looked into, before raising Hades with the machine manufacturer, it would be found, in the majority of cases, that the fault is not so much with the machine as with the human element side of the setting up and operating. This does not alone include the average factory help, but, on the contrary, frequently all the cause of the trouble experienced lies with the "Powers that be" in adopting the wrong policy for the right operation of the new installation.

Many managers of plants when they install modern machines are all too willing to fold their arms and say to the machine, **"It's up to you, now turn out the work,"** and because the machine does not do all the things in the manner expected, it is condemned off-hand along with its maker.

It should be remembered that our present modern machinery is the product of the best brains in the land. No manufacturer has as yet been able to perfect a machine with reasoning power, nor endow one with intelligence, yet these are the two very potent factors, essential to the proper operation of any outfit. The more evidences of a high order of intelligence there are present about the machine in regard to its manufacture, the more that machine is in need of proper intelligence, in its operation to bring out the best results that were put into the machine by its creators.

There are many individuals who seem to think that the more nearly perfect a machine is, the more unintelligent and ignorant its operator can be. To this cause fully 90 per cent. of all the trouble with new equipment can be ascribed. Remember, that it has taken years of hard labor and brains on the part of the manufacturer to bring the machine in question to its present high state of perfection and adjustment, and it is equally as essential to back the manufacturer's product up with intelligent operators, in order to obtain the highest possibilities out of the machine.

There is also another class of men present in our industrial life and that is the man, who claims to be capable of working out and building all kinds of home-made machinery at a much less figure than that asked for similar equipment. Many of our woodworking plant managers and proprietors have learned to their regret, after spending on home-made contrivances the purchase price of several modern machines that the former are but a sham against a proper, intelligently constructed article both as regards production and quality of work such as our woodworking machinery producers are turning out to-day.

Originating, creating and designing machinery of the type, such as present-day woodworking manufacturing plants find essential, requires vision and ability to look into all the operations and movements necessary to perform them, and to see the completed machanism with all its details in full productive operation. The manager who depends upon a lot of home-made make-shifts to turn out production and quality superior to his competitors, who believe only in the installation of the most modern and efficient equipment will, indeed, find a hard row to hoe.

At one time the writer was employed in a plant, where, in order to avoid the purchase of a machine made for a special purpose, in which a great amount of ingenuity and mechanical ability was required, a home invention was put in. The product turned out upon it lacked the touch of advancement and the outfit was capable of turning out less than one-half the quantity of work that the purchased machine was.

Lumber Prices Will Be Higher Soon

To the lumber dealer, my advice is to buy on every break, said R. B. Goodman of Marinette, Wis., Chairman of the Bureau of Economics, National Lumber Manufacturers' Association, in a recent lecture on "The price of Lumber," at Yale University; to the users of lumber, my advice is to buy according to the nature of the individual need by figuring the cost or the deprivation of further deferring requirements against a more gradual decline in lumber prices than in any other commodity; and to the timber owner, I would point out the evident fact that the advances of lumber values in the commodity scale will continue after we have passed our period of deflation, and that on the long swing he is assured of advancing values, and if this is true for the individual or private investor, it is equally true for the State and the Federal Government. This is to say, the forest policy which includes the expansion of publicly owned timber holdings rests on a secure economic base.

Price reactions are psychological. Economic laws work their effects through the reasoning powers of the producer and the consumer, the seller and the buyer. These reactions are industrial and commercial in the sense of being immediate, but they leave mental grooves or tendencies or prejudices both with the industry and with the public.

We acquire wasteful habits in using cheap things and efficient habits in using things that are dear. The higher priced species of lumber are assigned more definite grading rules with a greater number and variety of grades. The higher price of a better grade stimulates the use of a poorer grade. White pine was once graded as only select and common; then the common was graded as No. 1 and No. 2—below was waste; then No. 3 common was made and sold and No. 4 burned; then No. 5 came into the market, and now No. 6 brings a price that No. 1 once brought. The higher price stimulates the demand for little used species. Once the builder despised hemlock. Once you and I talked of mahogany and walnut as the only hardwoods—then oak, then gum and birch and maple came into our homes. This is because our American hardwoods were once too cheap, and when they became expensive we began to appreciate their beautiful grain and texture. The higher price of lumber stimulates the invention or the discovery of substitutes: Wire fences, cement sidewalks and fibre boxes are classic examples. The higher price brings more careful use. It has been the inspiration of the wood preserving industries. It has caused the railroads to creosote their ties and timber; the farmer to paint his barn.

If we look back in our industry but a few years, we see the waste that has been caused by low prices, the fastidious use of clear boards, the wasteful use of larger sizes, which cause the lumberman to leave the poorer product in the forest.

In 1915, Charles S. Keith, then president of the Southern Pine Association, submitted a brief to the Federal Trade Commission showing that through the three and one-third years of 1912, 1913, 1914 and one-third of 1915, the low price of lumber which rendered the lower grades unmerchantable and made it possible to market only the better part, of the better trees, caused a waste in the southern pine forests that aggregated for the period, at 1915 stumpage values, a loss to southern pine operators of $89,000,000, one whole year's timber supply, and an economic loss to the southern pine industry of about $500,000,000 of product. There is finally an aftermath of lumber price effect in the public mind that is curiously apparent just now as the result of last spring's runaway lumber market. High lumber prices are warnings to the public, and the Capper resolution, the Memphis hardwood case, the Calder committee hearings, the Federal Trade Commission's program of lumber statistics are all indications of the secondary reactions of high lumber prices. And back of this activity is the beginning of sober, intelligent, constructive effort to develop a sound national forest policy. No amount of forest exhaustion propaganda takes hold of the man in the street with the convincing grasp that is exerted by the retail lumber dealers' estimate of his house bill or the price he has to pay for a kitchen table.

The price of lumber is not high to-day. It will be higher before it is lower; it will be lower only on short reactions and its trend in the commodity scale is slowly upward, which means a continuously better utilization of our forests.

EDGINGS

A. M. Knox, of Knox Bros., wholesale lumber dealers, Pacific Building, Vancouver, is in Montreal and other eastern points on a business trip.

Eastern Pulp Company of Canada, Limited, has been authorized by supplementary letters patent to increase its capital from $500,000 to the sum of $750,000.

Canadian Laurentide Lumber Company, Limited, Montreal, was recently granted a federal charter to manufacture and deal in lumber, timber, pulpwood and other forest products. Capital $15,000.

The Beamsville Basket and Veneer Company's factory at Beamsville was completely destroyed by fire recently. The loss amounts to about $40,000 and is covered to the extent of $11,000 by insurance.

The Canada Fibre Board Co., has awarded the contract for a fibre board factory at Quebec. J. A. Barnard is the manager of the Canada Fibre Board Co. The head office is at 11 Notre Dame St., Quebec.

C. J. Cutler, manager of the Westminster Mills, Limited, was elected president of the New Westminster Kiwanis Club for 1921. He has shown that he can do other things as successfully as he can make shingles.

James T. Gilchrist, lumber retailer, Toronto, has been given civic permissiom to make an addition to his factory on Gladstone Ave. near Bloor St. W., Mr. Gilchrist recently completed several improvements to the exterior of his planing mill and yard.

Windsor Lumber Co., Limited, Windsor, Ont., was recently incorporated under provincial charter to manufacture and deal in all kinds of forest products. Capital $100,000. J. R. Scofield and W. Griesinger, both of Windsor, Ont. are two of the incorporators.

Isidore St. Laurent & Fils, Limited, Luceville, P.Q., have been incorporated with capital of $49,000, to manufacture and conduct a general lumber business. Two of the incorporators are I. St. Laurent, manufacturer, Ste Luce P.Q., and L. P. St. Laurent, Luceville, P.Q.

Dr. H. Mochizuki, forestry expert of the Japanese department of agriculture and commerce has been spending some time in British Columbia investigating the lumber industry. He is now extending his visit to Eastern Canada to study winter methods of lumbering.

McDonald Lumber Company, Limited, Montreal, were recently granted provincial incorporation to conduct a general timber business manufacturing all kinds of forest products. Capital $49,000. Two of the incorporators are R. Bourdon and J. R. Grivelle, both of Montreal.

The Canadian Tie and Lumber Co., 511 Temple Building, Toronto, are busy at the present time and are buying more railway ties than last year when they had a particularly active season. The company recently enlarged their offices and now have very commodious quarters.

A wooden bridge on the Algoma railway at Bellevue, Que., was recently replaced by a steel structure. After twelve years of service the Douglas fir had served its purpose. The 1,250,000 board feet of lumber were sold and realized more than the price paid for the lumber when new.

Dansereau Pulp & Paper Company, Limited, Sorel, P.Q., have been incorporated under provincial charter with capital of $5,000,000, to manufacture and deal in lumber, timber, pulpwood and other forest products. G. McTeigue and R. Brodeur, both of Montreal are two of the incorporators.

The Sterling Woodworking and Construction Co., of St. Lambert, Que., whose premises were destroyed by fire on November 20th last, have nearly completed re-building and expect to be in operation by the end of February. This firm will be manufacturing sashes and doors, interior finish and general mill work.

Pembroke Shook Mills of Pembroke, have by supplementary letters patent increased their capital stock from $100,000 to $500,000. J. T. Stuart, general manager of the company states that the increase in capital does not mean any immediate extensions to plant, but the step just taken had been under consideration for some time.

The Fort William Paper Co., of Fort William, Ont., are issuing $1,000,000, 8% first mortgage bonds for the purpose of increasing the capacity of the groundwood plant to 120 tons daily, and also to provide working capital. Col. Thomas Gibson, who is vice-president of the Spanish River Pulp & Paper Mills, is president of the Fort William Paper Co.

At a meeting of the Mountain Lumbermen's Association held recently at Calgary, new officers were elected for the year. The new president is Mr. A. K. Leitch, of the East Kootenay Lumber Co., Jaffray. He succeeds Mr. E. L. Staples, of Wycliffe, who held office last year. H. B. Cornell, of Golden, is vice-president, and I. R. Poole, of Nelson, the secretary.

The International Paper Company, Limited, Trois Riviere, P.Q., were recently granted incorporation under provincial charter to acquire a part or whole of the St. Maurice Lumber Company and to manufacture and deal in all kinds of pulp and paper products. Capital $20,000,000. Among the incorporators are Philip T. Dodge, of New York City and R. F. Grant of Trois Riviere, P.Q.

While logging camps and mills of British Columbia coast sections have been generally closed down, the official employment bureaus have been busy trying to find work for hundreds of men. Quite recently it was stated at the offices in Vancouver, that 100 tie-makers could find work making ties on contract. It was stated that at the prices offered, expert axe men could make as high as $15 per day.

Utilization of stump roots is planned by R. Crook, an inventor who has been interviewing officials of the department of industries in Victoria. Mr.

Crook is establishing small portable mills which he will send over the country. They cut cross-sections of roots and stumps. The grain is beautiful and takes a wonderful polish. The round slabs are practically unbroken. They are used as seats for chairs and other things. The market price for slabs with the best grains runs up to $6 each, or nearly $1800 for some sliced stumps.

The property and the assets of the W. C. Edwards and Company, Limited, and of Gilmour and Hughson, Limited, were transferred to the Gatineau Company, Limited, owned and operated by the Riordon Company, Limited, Montreal. Announcement of the consummation of the deal was made recently by F. B. Whittet, Montreal, secretary-treasurer of the Riordon and the Gatineau Companies.

Mr. Van Horne, who for several years has conducted a lumber operation on the Northwest Upsalquitch River in Restigouche County, N.B., uses a patent, improved snowplough which enables him to build fine smooth ice roads and thus very large loads of logs are hauled. Recently a load of 121 logs was drawn over the road and was the largest pile ever seen in that part of the country even by the oldest lumbermen.

James Frame, logging superintendent of the Cranbrook Sash & Door Co., Cranbrook, B.C., met death recently at Kitchener, B.C. He was at work loosening logs on a high skidway preparatory to their being loaded on sleighs when the higher logs broke away and one of them struck him on the head with such force that death was instantaneous. Mr. Frame was a native of Nova Scotia and was well known in the Nelson district. For a number of years he was engaged as bush foreman for the A. G. Lambert Co. before entering the services of the Cranbrook Sash & Door Co.

Equalization of rail freight rates as between Eastern and Western Canada is under discussion by a joint delegation of Board of Trade representatives from the four western provinces. W. F. McClintock of the Vancouver Board of Trade who is chairman of the transportation bureau has been in touch with the three prairie provinces, with the result that the joint conference was arranged. As the provincial governments of Manitoba, Saskatchewan and Alberta have already approached the Dominion authorities on the subject and the British Columbia government is being asked to join in representation, some substantial progress is now anticipated.

Earnings of the Whalen Pulp & Paper Company, operating three pulp mills in British Columbia for the first eight months of their company year, show a net income after paying fixed charges, including bond and debenture interest, but before taxes are paid, will be over three and a half times the amount reported for the full twelve months preceding. After allowing a 7 per cent. dividend on outstanding preferred shares, the current earnings were about 21 per cent. on the common shares, allowing as above, taxes and depreciation yet to be deducted. The production for the eight months is at the rate of 60,000 tons per annum.

Word comes from St. George, N.B., that A. C. Grant has sold his interval property to the Press Pulp & Paper Co. It adjoins land already owned by the pulp concern and will be used by it next season. The organization has also purchased the slasher at Musquash and will install them in the mill at the Dewar site. The Gregory Lumber Company has sold its holdings on the Magaguadavic and its mill at Bonny River to the pulp company. It is rumored that other concerns along the river have also been approached. The Press Pulp and Paper Company has rigid laws of conservation, which it adheres to in New York and other places where the firm lumbers, and report says that it will introduce the same measures of conservation on the Magaguadavic.

The new pulp and paper mill, which will be erected at Prince George, B.C., will cost between $7,000,000 and $8,000,000 according to plans now being completed in Victoria with Government officials by Robert Tyhurst, of Dome Creek, who is a member of an eastern pulp and paper syndicate. The mill will turn out 200 tons of paper daily. Prince George has been chosen for the site of the mill because of the peculiar pulpwood deposits in the interior of British Columbia and the advantage in freight rates to the prairies. Among others interested in the project are Angus McLean, of the Bathurst Lumber Co., Bathurst, N.B.; M. F. Preisch, of the Haines Lumber Co., North Tonawanda, N.Y.; Frank P. Jones, financier, Montreal, and several other lumbermen of the east.

Collecting resin from fir trees may yet become a recognized industry in British Columbia with a considerable number of people making their livelihood from it. The activities of the Douglas Fir Turpentine Company for the past year have been in the line of securing leases on suitable areas and of interesting individuals in the work of collecting resin deposts. The company which is headed by M. E. S. Oliver, has a plant in Vancouver, and it is Mr. Oliver's hope that enough of the raw material can be procured to give the plant a large output of the finished product. The apparent difficulty is to get a sufficient number of persons to devote their energies to gathering the resinous gum of the fir. On many of the islands in the Gulf of Georgia, where winds sweep the hillsides, the trees are rich in this resin, and the simple methods required to gather this deposit does not require any great outlay. Mr. Oliver has been taking the matter up with the Provincial department of industries with a view to turning many of the unemployed of the cities to profitable and productive employment.

Speaking of the use and durability of the wooden shingle, A. E. LePage, of Toronto, says: A correspondent states that it is only a small difference in price to get a fireproof roofing. He evidently overlooks the fact that if the use of wooden shingles is prohibited, the demand for the other lines of roofing material will in all probability increase the price to where it makes a serious difference in cost, even on a single house. The past five years has more than impressed the builders as to what supply and demand will do to prices. Others overlook the point that, from an artistic view, you can get a much better effect with wooden shingles stained than with any roofing material anywhere near the same price, and they can be put on under almost any weather conditions, and will not hold up a job.

We aim to build one million dollars' worth of houses in Toronto this year, and a law prohibiting the use of wooden shingles would be a serious matter.

We have a complete stock of

Install a "By-Pass" Exhauster

in your Saw Mill, Planing Mill or Plant

Our "By-Pass" Exhaust systems save your power and give better service. They handle green sawdust or wet, stringy material that usually clogs up an ordinary Blower system. The fan wheel is not overhung. No heating, clogging, or shaking. Three bearings.

Write for information.

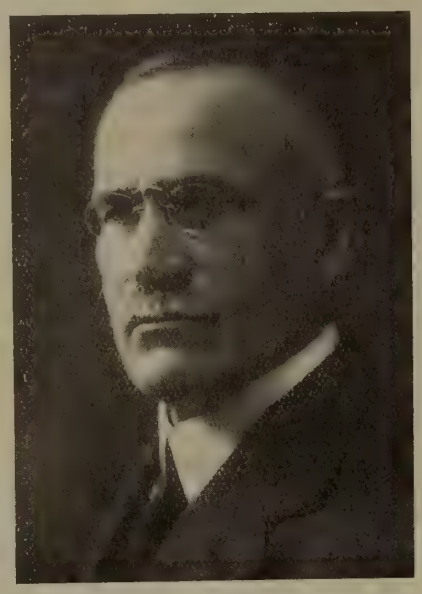
We manufacture and install systems complete.

Toronto Blower Company

156 Duke St., Toronto

A Progressive Eastern Lumberman

John Harquail, president of J. & D. A. Harquail Co., Limited, lumber manufacturers and contractors, Campbellton, N.B., is widely known in the Maritime Provinces as an enterprising business man. He was brought up on a farm and commenced with his father as a carpenter, eventually embarking in the lumber manufacturing line



John Harquail, Campbellton, N. B.

with his brother, D. A. Harquail, in 1894. Four years later the firm was incorporated under the name of J. & D. A. Harquail Co., Limited.

Mr. Harquail is a native of Dalhousie, N.B., and was educated at Shannon Vale, N.B. He is progressive and public-spirited and has held important offices in Campbellton, being president of the Board of Trade for several years and a member of the County and Town Councils as well as a councillor for Campbellton.

Mr. Harquail is fond of fishing, riding and driving, and is the proud father of six sons and four daughters.

Wightman Lumber Company Enlarging Service

The Wightman Lumber Co., Limited, of Bathurst, N.B., of which G. E. Wightman is managing-director, intends removing its head office from Bathurst to Montreal, where suitable accommodation has been acquired in the McGill Building, 211 McGill Street. The company will still maintain a buying representative in Bathurst, and will handle the cuts of the same mills as heretofore, but in addition it will add to its sources of supply the cuts of certain mills north and west, as well as a complete line of British Columbia forest products.

In speaking of the removal of the head office to Montreal, Mr. Wightman says: "This decision was brought about on our part owing to conditions in the lumber trade having changed radically since last year. In analyzing just what the effect was going to be on us as regards the service that we want to give and must give our customers and friends we are making the change. We feel that this move is going to enable us to be many times as useful to our clients as we have been during the past year; in fact we have considered this move wholly in their interests knowing that we could materially enlarge our field of service to them and we trust that they will look upon it in this way."

Recovery of Pulp Leads to Lawsuit

A declaration from the Supreme Court of Ontario that an order-in-Council, passed by the Dominion Government on August 30, 1920, rescinding one made in April, 1908, is not effective in law is the request of Joseph Lumley of Ottawa, in an action he has taken against the Riordon Pulp & Paper Co. and Manson, Limited.

The action relates to the recovery of pulp and other material from the bottom of the Ottawa River, opposite the pulp and paper plants of the Riordon Company at Hawkesbury. The plaintiff recites that material from the pulp and paper mill, finding its way into the Ottawa River, becomes the property of the Crown.

Part of the defence of the companies is that the Public Works Department in 1915 dredged the channel and that the company of Manson, Limited, was formed for the purpose of recovering the material, doing the work under Government supervision.

Leviathan and Anaconda Belting

are the lowest in ultimate cost

LEVIATHAN AND ANACONDA ELEVATING TRANSMITTING CONVEYING BELTING

BECAUSE

of their durability under conditions, ordinary and severe, wet and dry, hot and cold, of the great traction peculiar to their special construction, enabling them to be run slack without slip, thus giving greater arcs of contact and less strain and wear on bearings.

AND BECAUSE

their stretch is minimum and soonest out, leaving a thoroughly "live" belt. Remembering the amount of machinery often dependant on one belt, this saving in shut down due to take-up, means far more than the price of a belt to you.

Every Leviathan and Anaconda Belt is backed by a real guarantee. Leviathan Belts for general service, Anaconda Belts where there is moisture, acid or excessive heat or cold.

SPECIALISTS IN

Furnace Linings *for* Boiler Settings

We design and construct every description of Furnace Linings, Door Arches and Jambs, and Tongued and Grooved Dutch Oven Blocks. For Furnace Arches of all kinds we supply radial blocks in six different sizes. They make an arch 9 inches thick, and as they are in lengths of 12 and 16 inches, any desired length can be obtained.

Our linings are highly refractory, strongly immune of the destructive influences of sudden thermal changes, and will withstand much compression under high temperatures—three most important qualities.

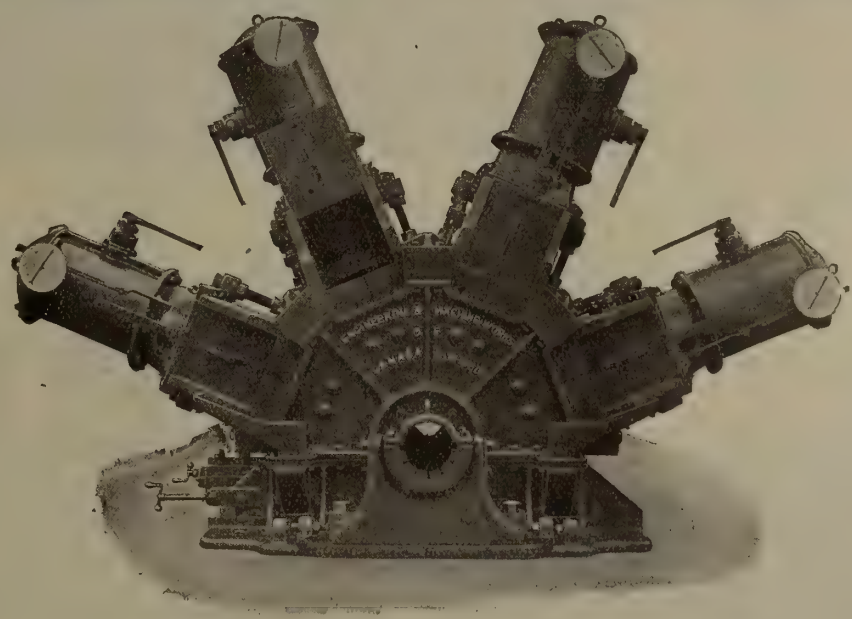
The Fire Box Blocks are tongued and grooved, and are made in sizes 16 and 18 inches high, and 4½, 8, and 9 inches thick.

All work is under the supervision of Mr. John W. Gates, who has had 35 years' experience in the designing and installation of Boiler Settings.

Grinding "Flour Pulp" Costs Money

It can be stopped. Let us tell you about our improved 4-pocket and 3-pocket Pulp Grinders we are now building in St. Catharines

"Tidmarsh" Patent Pulp Scrapers between the pockets prevent the pulp from entering the following pocket and being re-ground into flour pulp. This is an important money saver for you.



Built also in 3-pocket style

"Tidmarsh" Automatic Door Openers open the doors instantly by reversing the pressure on the feet when the wood is ground away. Refilling is quicker and easier which means steadier production.

We also make Chippers, Flat Screens, Wet Machines, Deckers, Digestors, Diffusers, Tanks, Penstock Work, etc.

We build Boilers all types and sizes—also Stacks, Breechings and Plate Work of all descriptions.

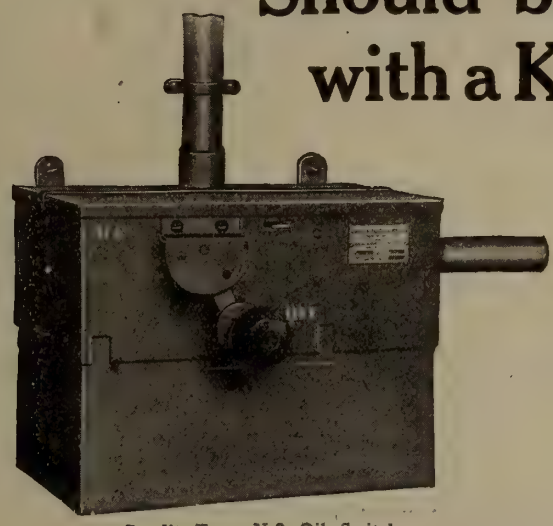
CONDIT

No Power Circuit Should be Broken with a Knife Switch!



Condit Type N-2 Oil Switch

Condit Type I Oil Starter

By using Condit Oil Starters and small industrial Oil Switches to protect small motors and small power and lighting circuits in woodworking plants, the fire hazard is eliminated and many delays caused by trouble with small motors not properly protected, is avoided. When a circuit is opened, the arc is under oil which immediately extinguishes it. Thus serious trouble very often caused by knife switch blades burning in ways which prevent proper contact and allowing a three phase motor to operate on single phase, is obviated.

Steam Skidder and Loader

Steam Power or Gasoline Power for your Skidding and Loading Machinery

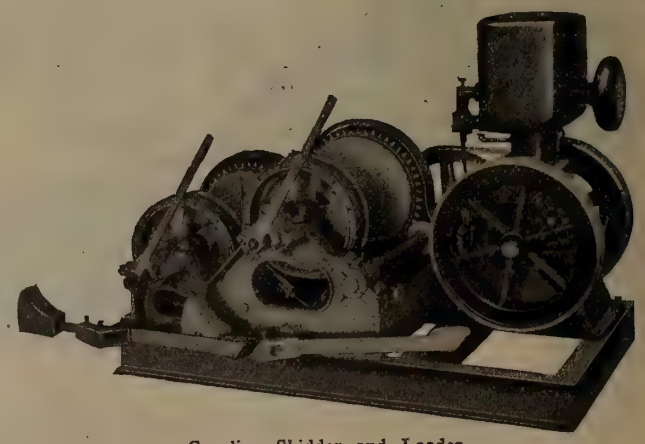
TAKE YOUR CHOICE

Either of these machines will do the same work; there is little difference in the shipping weight or in the first cost. Which ever power will suit your local conditions better is the one for you.

With either machine you can bring your logs from the stump to the road and pile them on your skidway incomparably quicker than by any of the older horse and man methods, and at much less cost.

With either machine you can greatly increase your output of logs and reduce your operating expenses.

Which shall we send you?



Gasoline Skidder and Loader

Marsh Engineering Works, Limited *Established 1846* **Belleville, Ontario**

Sales Agents: MUSSENS LIMITED, Montreal, Toronto, Winnipeg, Vancouver.

When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.
When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request.

J. L. Goodhue & Company, Limited

DANVILLE - QUEBEC

WINNIPEG AGENTS—Bissett & Webb, Ltd., 151 Notre Dame Avenue East, Winnipeg, Man.

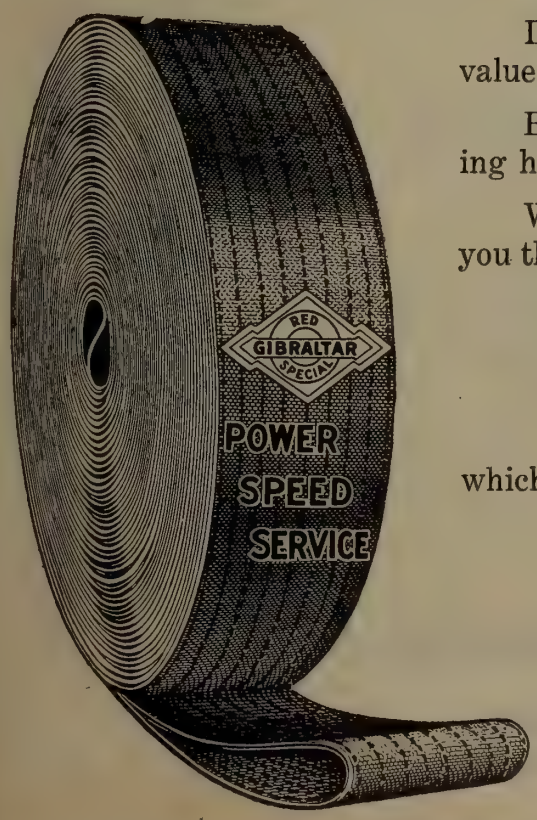
Why Worry About Belt Problems?

When We Can Ably Do It For You



Dunlop Belting Service, especially at this time of the year, is of inestimable value to Belt users who are adding to their Belting equipment.

Because it is a service that saves for the buyer—protects his interests in giving him the right kind of belt or belts needed.

We shall be glad to talk to you about your belting requirements and also tell you the facts about

"Gibraltar RedSpecial"

(The original Red Frictioned-Surface Belt of Canada.)

which have made it the most favored Belt for all manner of transmission work.

Dunlop Tire & Rubber Goods Company, Limited

Head Office and Factories: Toronto.

Branches in the Leading Cities.

Makers of High-Grade Tires, Hose and Packings for All Purposes.

Be Prepared for Fire—

Dust Collectors and Furnace Feeders at Angus Shops of C. P. R., Montreal. Collectors in the center deliver shavings either to furnaces, box cars, or storage vaults

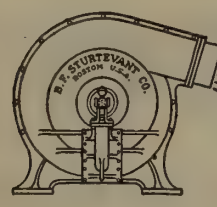
The Sturtevant System has met with the approval of numerous lumber companies throughout the Dominion, as well as other plants where planing mills form a part of the establishment.

This is demonstrated in the above photograph, which shows Sturtevant Dust Collectors, and Furnace Feeders at the Angus Shops of the C.P.R., Montreal. The collectors shown, deliver shavings either to furnaces, box cars, or storage vaults.

B. F. Sturtevant Company of Canada, Limited

Head Office and Works: Galt, Ontario
Sales Offices: - Toronto and Montreal

But Do Your Utmost To Prevent It!!!



Sturtevant
REG US PAT OFF
PUTS AIR TO WORK

The introduction of hose—fire-buckets—chemical extinguishers, and all this sort of fire fighting apparatus in your planing mill, is plain common sense.

To fight fire efficiently, it is imperative that your plant possesses the necessary equipment.

But why wait for fire to come to you?

Take the Offensive. Keep Fire Away. Prevent It.

Install the

Sturtevant
(TRADE MARK)

Planing-Mill Exhausters

This is the system that **prevents** fire, by removing the **cause.**

All shavings, sawdust, litter and other refuse is drawn through pipes by a powerful suction, and quickly deposited in some disposal centre, far enough from the mill, to be a menace no longer.

You are concerned in the prevention of fire in **your** plant.

This advertisement has no doubt interested you to this point—now just send us a card, and we will tell you more.

B. F. Sturtevant Company of Canada, Limited

ATKINS

STERLING QUALITY SAWS

"Use Atkins *Sterling Quality* Saws and be happy"

That's an old slogan, but it contains food for thought.

If you want to reach the peak in production of lumber to meet the great demand, you cannot go wrong if you will equip with Atkins Saws.

Use them in the mill and in the woods, and then you will know what it means when we say,

"The Finest on Earth"

E. C. Atkins & Co.

Established 1857

"The Sterling Quality Saw People"

Canadian Factory: Hamilton, Ontario

Branch: Vancouver, B. C.

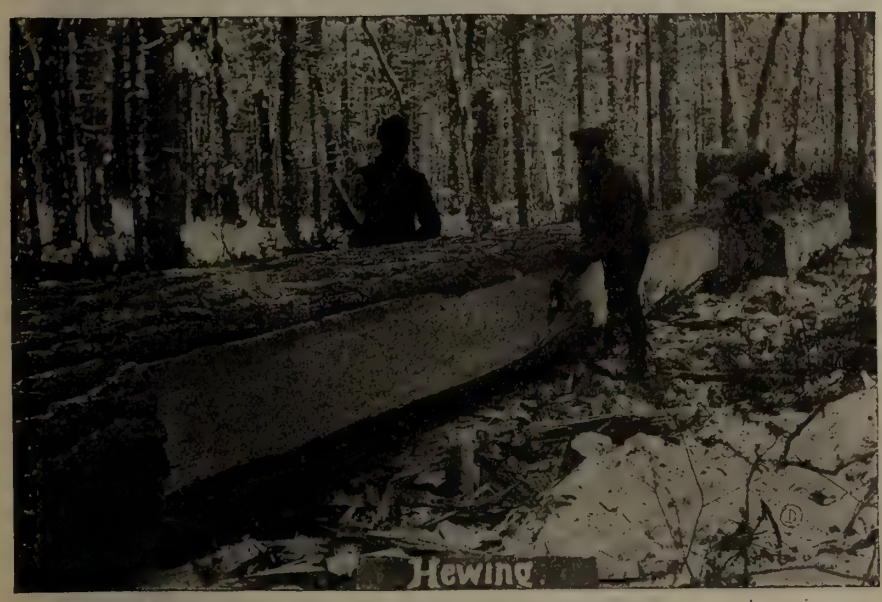
ONTARIO

Canada's Banner Province



Ontario's timber production last year valued at $26,774,937 or 40% of Canada's total output.

Pine production,	905,442,000 ft. B.M.
Pulpwood,	246,282 cords.
Railway Ties,	5,704,459

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

A Testimonial from New Brunswick

Below are reproduced extracts from two letters, typical of many we constantly receive from purchasers of the Moreau Barker. Note the date of the second letter:

South Nelson, N. B.

"We have been running night and days (20 hours). On a half night 'shift' we put through 18 cords. This I think, was the best work we did. Our average would be from 20 to 25 cords. We are very much pleased with our Fairbanks' oil engine. It runs continuously for 21 hours every day, driving a heavy haul-up, a 'live roller' a 36" cut-off saw, the rosser, and a knife grinder. We do all this with 15 H.P. We are enclosing a rough diagram of the mill lay-out. It is about 6' from the ground, with one main shaft in the centre. The haul-up is driven by a small set of cogs."

South Nelson, N. B.
December 4th, 1920.

"In reply to yours, we wish to advise you that we have moved our rosser to the winter location, and find that it works just as well or better so far in frozen wood."

Yours truly
O'Brien Ltd.

Proves Its Worth

The GeBott Resaw, and Planing Mill Grinder,- has proven its worth many times over, in the planing mills.

It is the only machine made, that will grind a Clark mill without going into the pit to grind lower wheel. Grinds wheels up to 21 inch face, leaving them in perfect balance.

Takes just one quarter the time required by an emery wheel grinder.

Get our prices on new and rebuilt saw filing machinery. We can save you considerable money on anything you may require.

GeBott Manufacturing Company

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

I want you to use

Imperial Genuine Babbitt Metal

For Stickers of highest speed, or Engines of heavy weight and

Harris Heavy Pressure

For all other general purpose work about your mills or factories, because in thirty-five years of practice, I have proven them to be

TRUSTWORTHY

Thousands of satisfied users.

You have my word, no better Babbitt is made, and I want you to believe me.

All Jobbers or Our Factories in

TORONTO MONTREAL WINNIPEG and VANCOUVER

will be pleased to fill your orders.

THE CANADA METAL COMPANY, Limited

FIRE BRICK
AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

SAWMILL AND TIMBER LIMIT
in Mountain Spruce
District of British Columbia

Now in operation, complete as going concern, with logging equipment, railroad and mill yard.

Capacity of Saw Mill 90,000 to 100,000 ft. per day. Over 200,000,000 feet of timber available on timber limit of the Company, and additional large supplies on adjacent limits.

White Spruce	**Douglas Fir**
Red Cedar	**Balsam**

and other varieties of standing timber. Address inquiries to

LUMBER MILL
167 E. ONTARIO STREET
CHICAGO, ILL.

The Carriage You Are Looking For
Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1¾ in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

For Pulp and Saw Mills

It is not always possible to keep belting free from injurious acids, steam, oil, dust, etc. and the consequent depreciation often becomes costly.

These conditions are met with frequently in pulp and saw mills and it is there that "Gripoly", which is composed of 85% pure camel hair and 15% best long staple cotton, will live longest.

Patent "Gripoly" Solid Woven Belting is specially adapted for the saw mill. It is impervious to water, acid, oil or steam, and on account of the way it grips the pulley, transmits more horse power than any other belt.

The edges are indestructible, and "Gripoly" is guaranteed to stretch less than any known belt.

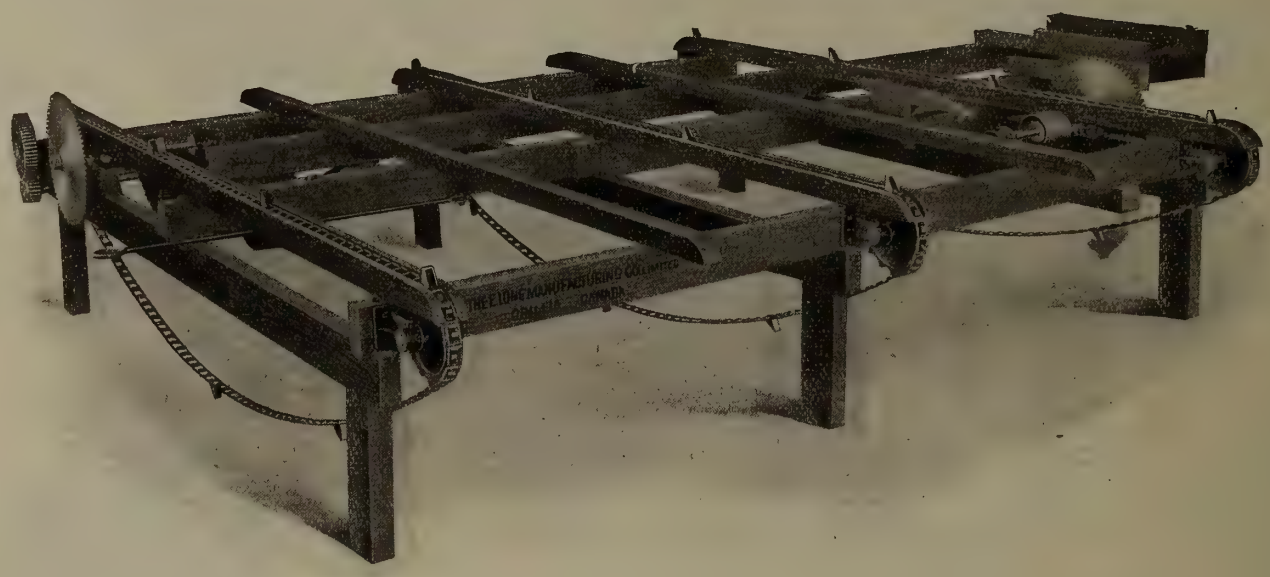
LUMBERMEN'S EQUIPMENT

THE E. LONG MANUFACTURING CO. SAW MILL MACHINERY ORILLIA, CANADA

For the Saw Mill

No. 2, Two Saw Right Hand Trimmer



This Right Hand Trimmer is the Standard for a left-hand saw mill. Substantially constructed throughout and will give lasting and efficient service at the least expense.

The standard machine will trim stock 5" thick, and from 6 to 18 feet long, but can be made to trim heavier, as well as longer material if required.

The Frame, Feed Works, Tail Sprockets, Saw Mandrells etc., are made of the highest grade material and ensure long, uninterrupted service.

Waterous "Trouble-Proof" Haulup Chains

The efficiency of your haulup depends directly on the strength and the wearing qualities of your log chain. Waterous Chains have more than their share of both. They are built of selected materials. The shop work on them is of the very best. They are tested and inspected before shipment.

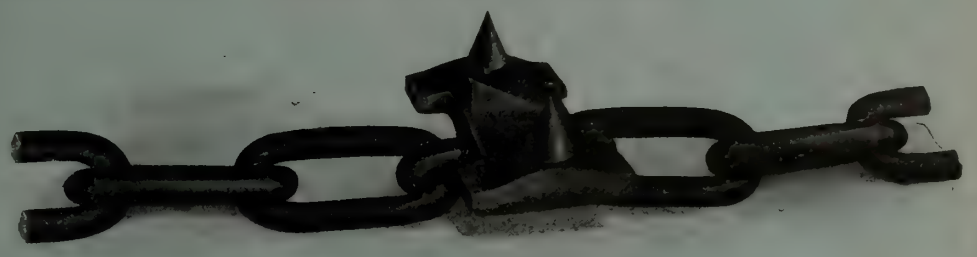
Next time you order—think of "Trouble Proof"—and specify "Waterous."

Waterous Forged Bull Chain

This chain is forged from the best refined wrought iron. It is 6 inch pitch and is built in seven sizes, ranging in weight from 2½ lbs. to 15 lbs. per foot. Iron, steel and wood specials of various forms are supplied with this chain. It can be used on all size Bull Wheels and is also adapted for Rough Wood and Refuse Conveyors.

Short Link and Long Link Coil Chain

For strength and general usefulness this chain is hard to beat. Fifteen sizes are built ranging in weight from 150 lbs. to 2,335 lbs. per 100 feet. Only the best chain iron is used in its manufacture, welds are exceptionally long and carefully made, and all links are tested for size and uniformity before leaving the shops.



Waterous All Steel Haulup Chain

The heaviest, largest logs can be handled on this chain. It is the longest lived and cleanest chain we build. It is 8 inch pitch throughout and carries a heavy cast steel special spaced every 6 feet. Side bars, centre links and connecting pins are all of steel, the links and bars being drilled for the reception of the pins.

We also build Malleable Log Chain, Roller Haulup Chain, Chain for Pulpwood and for Saw Dust Conveyors.

Any length can be supplied.

Our list of Specials, Sprockets, Idlers and Spools is exceptionally complete. These are are illustrated and described in our Chain Catalogue No. 108, which we will be glad to supply on request.

HEAD OFFICE: OTTAWA, ONT.

A Fast Feed Matcher Head scientifically designed for matching from 900 to 800 lineal feet per minute.

The SHIMER Fast Feed Expansion Matcher Head
With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.
These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.
The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.
The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market. WRITE FOR PRICES

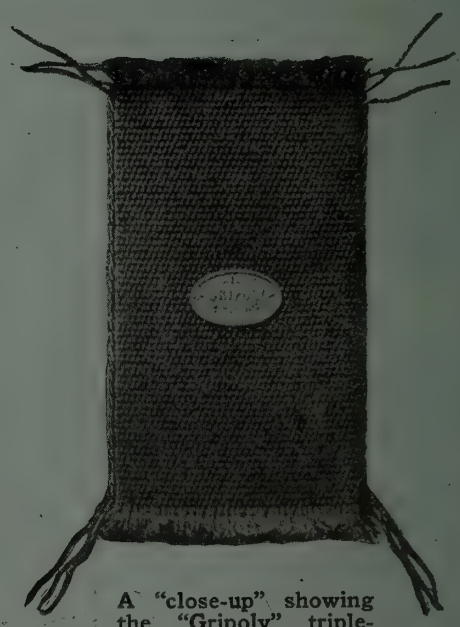
The Best Woven Belting for the Lumber Mill

"Gripoly" is made in Great Britain by Lewis & Tylor, Limited

"Gripoly" was designed as an all round general purpose belting, but it has proved specially adapted for the adverse conditions met with in the average saw mill. Inferior belting is apt to cause a breakdown just at the moment when lost time, means lost money for the mill owner.

"Gripoly" will turn your saws and your machinery as long as they are in running order. Oil, acid, steam, heat and cold have no effect on "Gripoly" Belting.

Write to-day for booklet.



A "close-up" showing the "Gripoly" triple-woven edges. Prevents wear from constant rubbing against guide forks, etc.

Export Agents—
SPENCER, LOCK & CO.
LONDON, ENGLAND

On the northern shores of the Georgian Bay
Where the sad waves croon to the summers day
And the lone wolf's howl and the wolverine's scream
Mingle like notes in a frenzied dream.

Where the timid deer steals to drink his fill
From the clear stream trickling down the hill
And the bull moose on the mountain's side
Trumpets his call to his shy wood's bride.

Where the lonely loon on the placid lake
Calls his mournful cry till the echoes wake
And the black duck and mallard on pinions wide
Seek the inland lake their young to hide.

And the bold moon-shiner plies his trade
Despite the laws by "Raney" made
And the sly bootlegger wends his way
And laughs at the fines of the O. T. A.

The prospector looks for the mineral's shine
But our ONLY QUEST is the GOOD WHITE PINE
With its grain so smooth and its knots so small
And a record from Windsor to Montreal.

TORONTO

P.S.—HEMLOCK PHONE MAIN 3153

WE STILL HOLD THE KEY TO THE HEM-LOCK

Business is Still Improving

This statement is founded on fact, because our sales are actually getting better, and so far as we are concerned there is not much dry lumber left unsold.

Our last list shows a reasonable quantity of some dry sizes still available, other sizes are gone entirely.

If you are interested in Culls we can quote some very attractive prices.

Does this Interest you?

SUPPOSE your stock has reached a low ebb—where your need for more stock becomes urgent.

Isn't it worth a great deal to have your order shipped just twenty-four hours after it is received?

When necessity requires such action, that is just the sort of service we can give you. Our big service yard at Logansport, Indiana, where we carry 4,000,000 feet of quality dry stock, makes such service possible.

Your order in our hands always means just this—Satisfaction for you.

FOR HARDWOODS

" LET BUFFALO DO IT "

"Why should the large consumers of lumber carry large stocks and heavy investments in hardwoods when we have 50,000,000 feet or more of hardwoods at Buffalo and 25 railroads to give them service—

Both northern and southern hardwoods flow constantly into Buffalo.

This great market is continually buying and toning up assortments. Give Buffalo Dealers your orders."

HARDWOOD LUMBER

THIRTEEN BAND MILLS
SIX PLANING MILLS
ELEVEN FLOORING UNITS
NINE DIMENSION MILLS

ANNUAL CAPACITY:
130,000,000 feet.

We have in our successive price lists reckoned with the law of supply and demand, and followed the general decline in lumber prices.

In issuing our February stock and price list we took further losses on lumber on hand produced at the high cost figures of the past. We are basing these prices upon the reduced production costs which we expect in the future; in other words upon the costs which we expect after March 1. On that date we will resume the operation of forty per cent. of our mills. We will resume production upon reduced wage scales,—making reductions as drastic as we feel it possible to make in justice to our employees.

Conditions generally are showing gratifying improvement; and we expect to put other mills into production from time to time, as circumstances warrant this course.

FIRE BRICK

AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

"The Canada Lumberman" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills etc. "The Canada Lumberman" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and " For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

SUBSCRIPTION RATES

The postal rates on periodicals having been trebled on January 1st, 1921, the subscription price of the "Canada Lumberman" in Canada, United States and Great Britain has been increased to $3.00 a year; other foreign countries embraced in the General Postal Union, $4.00. Current subscriptions will be continued at the former rate until expiration of the subscription year.

Where Are the Railways Heading?

Their usurpation of power, their growing indifference toward public rights, and their high-handed methods in exacting increasing tolls from the business interests of the country, are not at the present time winning the great transportation companies many friends or admirers. Not only are vast business interests arrayed against the roads, but protests are coming from the consumers of commodities on which the carrying charges are sometimes heavier than the value of the articles shipped.

Freight rates have become so excessive as to stagnate business in many lines, and no interests have suffered more severely in this respect than those of the lumbermen. At all association meetings, whether retail, wholesale or manufacturing, the terrific charges made by the carrying companies have been the subject of heated debate and just condemnation.

Several speakers took occasion at the recent meeting of the Ontario Retail Lumber Dealers' Association to express their disapproval of the levy which now prevails on all shipments, and showed conclusively that in many points in Ontario the rates within the last three years have been augmented from 125 per cent. to 200 per cent. Numerous publications have taken up this matter in the interest of the people, and declare that the sooner public opinion works strongly and aggressively on the matter of excessive freight rates and compels a reduction in operating costs, the quicker general business will be promoted.

There is no class in the community as highly paid as railway men, and yet their efficiency has not markedly increased nor is there any better service rendered by them since they are earning triple and quadruple under the McAdoo award what they were three years ago.

Canada is a land of sparse population, widely-scattered distances, young industries and growing activities, and it seems too bad that the latter should be throttled and handicapped by the costs placed upon every manufactured article from the time it leaves the factory until it reaches its point of destination or distribution. This heavy charge adds nothing to the value, usefulness, quality or durability of the article, no matter whether it is lumber or some other commodity. As a result of the charges, many plants are either closed or working only part. time, for the simple reason that the public refuse to pay the constant levies. Stocks on hand, other than those of actual necessities with which the people are clothed or fed, are lying dormant.

There is a lively fight being waged by the railways across the border for lower wage schedules, and if this agitation is successful, it will, probably, have a reflex action in Canada, where for a long time operating expenses have been out of all reason. If these expenses can be reduced, it is likely that a reduction in freight rates would be speedily effected. Some rather startling facts have been presented, showing as a result of colossal railway costs, which are, of course, primarily responsible for the heavy freight levies, that thirty-six railways in the United States did not earn their operating expenses in January and twenty-eight more roads did not earn over operating expenses enough to pay taxes and fixed charges. These sixty roads, making up 40 per cent. of the total mileage of the United States were, so far as January returns were concerned, heading straight for insolvency. The top notch wages put into effect in the period of Government control were the main cause of this, but there was also remarkable padding of employees. In 1917, before the Washington Administration took hold, the railroads employed 302,828 machinists, boilermakers, blacksmiths, electricians, air brakemen, skilled shop employees, and machinists' helpers and apprentices. In 1920, when the number of locomotives and cars to be maintained had increased only slightly, they had 443,774, an increase of 47 per cent. The total wage paid in 1917 to these employees was $317,870,000, while in 1920, after the July increase, their wages were running at a rate of $800,000 a year. The increase was 180 per cent. The total increase in the number of employees in the period of Government control was 610,000. In clerks, for instance, there was an increase of 29 per cent. between 1917 and 1920, and a wage increase of 112 per cent. This astonishing burden, on railways now carrying only two-thirds of normal traffic, makes lessening of wage expenses imperative, if the lines are to exist at all as efficient carriers. Since September, the United States railways have let out 200,000 employees, in a determined effort to reduce operating expenses. But the national wage agreement, which has a considerable period yet to run, stands in the way of reduction, and the Railroad Wage Board is being pressed to recognize the urgency of the need of the railways.

Who Are Your Competitors?

To prove that 20th century merchandising is being assimilated by the boys of the old school as well as the younger men in the retail lumber game was evinced by a representative of this journal while in conversation with the head of an old and well-known lumber organization of eastern Ontario.

At the close of an interesting interview with the veteran lumberman on the present day lumber demand, the question was asked, How many competitors have you in town? Thirty, was the prompt reply. The questioner was flabbergasted. Was it possible there could be as many as that in a town of that size. The active old gentleman went on to explain that there wasn't thirty lumber merchants but that he considered all the candy stores, ice cream parlors, automobile agencies, etc., his competitors.

"I'm not a kill-joy by any means, but if the people spend their money in these stores, it is out of the question for them to build homes of their own or make improvements. I have to come to the conclusion that the lumber business is away behind other retail enterprises. Go anywhere, and you meet retail advertising of all these luxuries, but never once in six months will you run across an advertisement or a display by a lumber dealer telling the public of some new and substantial design of home. Why? Up to the present time the lumber people have retired and waited until the public saw their mistake, and saved their pennies and built a home of their own, but the great majority have not seen their mistake yet, but go on sporting motor cars while their homes are neglected," concluded the aggressive dealer.

Great Gathering Ontario Retail Lumbermen

Many Important Topics Discussed—Standard Order Form Adopted—New Mechanics' Lien Act Under Way—Ottawa Secures Next Provincial Convention

Successful and enthusiastic, well-attended and representative was the fourth annual meeting of the Ontario Retail Lumber Dealers' Association held at the Carls-Rite Hotel, Toronto, on Tuesday and Wednesday, February 15th and 16th. The number of delegates exceeded that of any previous gathering and the sessions were marked by business-like proceedings, lively discussions and a general advance in the welfare, progress and prosperity of the industry.

The entertainment features were enjoyable and the retail lumbermen of Toronto certainly did their part in seeing that the visitors were all well looked after from the time they arrived until they entrained for home. The theatre party at the Pantages on the night of February 15th was much appreciated as well as the automobile drive around the city at the conclusion of the second day's proceedings. The annual banquet was attended by some 300 guests, representing every branch of the lumber industry from the woods to the sale of the finished product. There were many wholesale merchants and travellers present and the social function was one of pleasant association and happy reminiscence.

Ottawa was selected as the next place of meeting, which is a compliment to the newly-elected president, E. M. Barrett, who has long been a vigorous worker in the ranks of the retailers.

A tribute was paid to the energy and devotion of John B. Reid of Toronto, to the cause of the O.R.L.D.A. during his term of office in that he was elected honorary-president, which is a high honor.

Officers Elected for Coming Year

The officers for the coming year are:—

Honorary President—J. B. Reid, Toronto.

President—E. M. Barrett (Barrett Bros.), Ottawa.

Vice-president—J. C. Scofield (Windsor Lumber Co.), Windsor, Ont.)

Directors—Eastern District, Grant P. Davidson, Ottawa; F. B. Van Dusen, Brockville.

Toronto District—W. M. Tupling, Orillia; W. C. Irvin, Toronto.

Western District—Thomas Patterson, Hamilton, and A. J. McKinney, Woodstock.

Southwestern District—A. R. Sanders, St. Thomas; John Wallace, London.

Northern District—F. E. Hollingsworth, Sault Ste. Marie; D. H. Andress, Sudbury.

The chairmen of the Orangeville District, J. A. Matthews, Orangeville; Stratford District, Robert Oliver, Listowel, and Niagara Peninsula District, K. J. Shirton, Dunnville, are also members of the executive.

All the officers were elected without any opposition and the friendliest feeling prevailed. J. B. Reid was nominated for a second term, but positively declined to be a candidate for the office. He thought that it was an honor which should be distributed and should go to various parts of the province. There was loud cheering later when E. M. Barrett, the newly-elected president, rose and moved that J. B. Reid be made honorary president of the association with a seat on the board of directors. This was seconded by James Harriman of Niagara Falls, Ont.

Welcomed by President Reid

In opening the proceedings, Mr. Reid said he was glad to see such a large and representative attendance and hoped all would have a pleasant and profitable time while they were in the city. Continuing, he said: "In the matter of remarks from the president, I propose to make an innovation. I have no address or written report as the one from the secretary-treasurer will cover everything from one end of the year to the other of what has been done by our association.

"We are glad you have come here to take part in the work, thus showing your appreciation of what has been done during the past year. The Entertainment Committee will look after you well, while you are in Toronto, but the business end is more important, and I am going to see that it is pushed through. I want every man in this convention, who has an idea, or thinks he has an idea, which is going to benefit the lumber trade, to let it come out here. We desire a full and free discussion. We are all one body and we will sift out what is going to benefit this association. In this work, however, we want you to help the officers and members with the best ideas you can bring forth.

"Our association is growing in strength and influence, and your attendance here in such large numbers is an indication that you are interested in its progress and welfare. Meeting so many of your fellow-men cannot but fail to do you some good, or otherwise many of you would not have spent money and time to come such long distances to be present at the proceedings, which I hope will be profitable and pleasant."

Progressive Work During the Year

The secretary of the Ontario Retail Lumber Dealers' Association. H. Boultbee, read an interesting and instructive report of the year's operations as follows:

Mechanics' Lien Act

It is not possible yet for us to report any progress in connection with this very important matter. A combination of circumstances, and possibly the interests of other parties, are working together to delay us in securing results in this connection. Members of the association are familiar with the efforts which we made in previous years to have the Mechanics' Lien Act re-drafted and made more in accordance with modern lien act practice in other provinces and states. Our efforts this year have been entirely devoted to correspondence with the Attorney General, for Ontario, Hon. W. E. Raney. During the session of the Legislature in 1920, we were obliged to be patient, because the Government was then new and had a great amount of legislation to put through.

On May 3rd, 1920, Hon. W. E. Raney advised us that he intended to appoint a committee to take the matter into consideration and that this committee would sit during the recess between sessions and we would be given an opportunity to be heard. During the summer Hon. W. E. Raney apparently changed his mind on this matter and decided to submit the Mechanics' Lien Act to a committee of the York County Law Association. Early in September Hon. W. E. Raney invited the York County Law Association to appoint a committee to draft a new Mechanics' Lien Act. We believe it is unfortunate for our interests that this step should have been taken.

In the first place the President of the York County Law Association is very strongly a mortgagee man and we are advised that he has expressed the opinion that "The supply men are not to get any further protection." Furthermore, we are advised that the officers and committee of the York County Law Association are nearly all engaged very largely in the mortgage loan business and are naturally more concerned in preserving the mortgagee's position than in seeing that material men receive protection. Our solicitor endeavored to obtain action on the part of the York County Law Association. On November 5th, a meeting of the York County Law Association was held and the invitation of the Attorney General was accepted. A committee was accordingly appointed to draft a new lien law, and our solicitor, Mr. John Jennings of the firm of Jennings & Clute, Toronto, is a member of this committee. Mr. Jennings has endeavored to get this committee at work, but has not as yet obtained any result along this line. On January 28th, Mr. Jennings again discussed the matter with the Attorney General and expressed his fear that no progress whatever would be made through the York County Law Association. The Attorney General then asked our solicitor to arrange an appointment with him to discuss the situation.

Hon. W. E. Raney has now asked us to prepare a bill and have a private member (a lawyer) present it. He (Raney) will then give us a committee to consider the bill and report. Mr. Jennings is now drafting the bill.

Campaign Against the Use of Wooden Shingles

Eearly last September Mr. J. B. Laidlaw of the Norwich Union Fire Insurance Society, Toronto, delivered an address before the Ontario Fire Prevention League and his subject was "The Fire Menace of the Wooden Shingle." At the conclusion of his address he suggested that the League should pass a resolution calling upon the Ontario Government to enact legislation to prohibit the use of

John B. Reid, Toronto
Honorary President of O.R.L.D.A.

E. M. Barrett, Ottawa
Newly elected President of O.R.L.D.A.

J. C. Scofield, Windsor
Newly elected Vice-Pres. of O.R.L.D.A.

H. Boultbee, Toronto
Re-elected Secy.-Treas. of O.R.L.D.A.

wooden shingles on roofs of buildings within 50 feet of any existing building; and prohibiting the repair of existing shingle roofs when the amount of the repairs was 30 per cent or more of the roof. The Fire Prevention League did as Mr. Laidlaw suggested. Your Secretary considered that this was a situation that concerned the members of the Association very vitaly. Moreover, it concerned also in an even more vital manner the interests of the lumber manufacturers and wholesalers of Canada who produce or sell wooden shingles. On the day following Mr. Laidlaw's address an interview was given to the Toronto Daily Star which included a number of the most important facts in favor of the use of wooden shingles. Following the appearance of this interview many citizens wrote letters to the press opposing the prohibition of the use of wooden shingles. Mr. J. B. Laidlaw also wrote several letters, endeavoring to answer the letters sent in by citizens.

The Canadian Lumbermen's Association, the Wholesale Lumber Dealers' Association, the British Columbia Shingle Agency and the British Columbia Department of Lands all took this matter up vigorously and prepared for a united campaign against the proposed bill. A capable lawyer was approached who expressed his readiness to undertake the work of managing a campaign. An expert from the West, a man of wide experience in this particular matter was engaged by the British Columbia Shingle Agency. The B.C. Lumber Commissioner at Toronto was preparing circular matter to be sent to all retail lumber dealers in Ontario urging them to write to their respective members of Parliament. In fact preparations had been made for a very vigorous campaign. It was not considered advisable to start this campaign in full force until it was definitely known that a proposed bill was to be introduced. Our information, obtained from exceptionally reliable sources, was to the effect that Mr. George F. Lewis, Secretary of the Ontario Fire Prevention League, had made a rough draft of the proposed bill and that he fully intended to introduce it. A meeting of his executive was called, for the purpose we understand, of approving the draft of the bill. The executive decided, however, that the public had not yet had sufficient education to stand for such a measure and it was decided that the bill should be postponed for one year. We also are advised that it is the intention of the Fire Prevention League to conduct an extensive educational campaign during the coming year with a view to introducing a bill, possibly of a more drastic nature, next year.

It is for the members of this Association to discuss what stand they may desire to take in connection with this matter. If they wish to co-operate actively with the other associations in opposing the campaign of the Fire Prevention League, a resolution on this matter should be passed to that effect. It has been suggested to your Secretary that inasmuch as many of our members are interested in the selling of substitute roofing materials we may not secure a unanimous opinion in regard to this subject. Whether this is the case or not can only be developed by discussion and it will be in the interest of the Association that a definite pronouncement on the subject should be made at this meeting.

Incorporation of the O.R.L.D.A.

At the annual meeting of our Association last year a motion was carried instructing the Secretary to obtain provincial incorporation for the Association under the Act for the incorporation of companies without share capital. This has been done, at a cost of about $10.00. Throughout the greater part of 1920 the Association has enjoyed the privileges of incorporation.

Incorporation of Labor Unions

A resolution urging the Dominion and Ontario Governments to require that all labor unions should be incorporated was carried at our last annual meeting. A copy was sent to the Minister of Labor at Ottawa and Toronto. From Ottawa we received a reply in the following words: "This question has from time to time been submitted to the Government for consideration but so far no affirmative decision has ever been reached. To enact Legislation of this sort at the moment would probably provoke more discontent and unrest than already exists and therefore I am not sure it would be desirable to introduce the subject at this session of Parliament. Signed, G. D. Robertson." From Hon. W. R. Rollo, Minister of Labor in the Ontario Government we received a reply in the following words: "The Ontario Government has not at the present time any such measure under consideration nor has it adopted any policy in connection therewith, and so far as I am aware has no intention of introducing such Legislation at the coming Session."

Preservation of the Forests

One of the resolutions carried at our Annual Meeting a year ago urged the Ontario Government to adopt more modern and effective methods of forest preservation and to place the management of the forests of Ontario under a separate department. Your secretary understands that during 1920 the Department of Lands and Forests was separated from the Department of Mines which were formerly conducted as one Department. A copy of our resolution was sent to Hon. Beniah Bowman, Minister of Lands, Forests and Mines and on March 10th, he replied, stating that it was his intention to make such changes in the methods and organization connected with the forest industry in Ontario as would adequately take care of protection and reforestry, and forest preservation generally.

Discount to Contractors

Your secretary was in receipt, during 1920, of a letter from the Long Island Retail Lumber Dealers' Association, Long Island, N.Y., asking whether retail lumber dealers in Ontario give contractors an advantage when purchasing lumber and building material. The Builders and Contractors' Association of Long Island has asked the Retail Lumber Dealers' Association there for a discount of 10 per cent. While the situation at Long Island is of no practical importance in Ontario, members of our Association will be interested in the fact that a canvas of the dealers in Toronto showed that none of them give any such advantage to the contractors, and are in fact strongly opposed to such a practice.

Fishing Club for the Dealers

One of the very pleasant features of our Annual Outing last year was the visit paid to the Alabama Hotel, on the Upper French River. Our members remained there from the middle of Sunday afternoon until Monday noon. The experience was wonderfully delightful and every member present was able to enjoy himself according to his own individual desires. Many members indulged in the splendid fishing afforded by the waters in this district. So pleasant was this portion of the trip that our President, Mr. J. B. Reid and other members of the Association have since been considering the possibility of establishing a fishing club owned and operated by the

Association or by Association members, upon the Upper French River. Your secretary, at the request of President Reid has communicated with the secretary of the Solid Comfort Fishing Club which has its head-quarters on the French River near the place visited by our Association last year. In reply we have received an interesting outline of the way in which the Solid Comfort Fishing Club is operated and this information is available in case the members of the Association take favourably to a proposal to establish such a club. Our president would like to have the matter discussed during this meeting and will no doubt be prepared to explain his views when the discussion comes up.

Mr. Boultbee then gave a full report of the successful midsummer outing of the Retail Dealers' in August last to North Bay, Callender, Trout Mills, Cache Bay and Sturgeon Falls and the hospitality of the lumbermen and towns of the north.

Tax Upon Unlicensed Insurance

Early in 1920 it was reported in the press that Sir Henry Drayton, Minister of Finance, was considering the advisability of imposing a tax of 15 per cent. upon premiums paid to insurance companies operating in Canada without license. This proposal had come up occasionally in former years and had not been acted upon. The objections are chiefly threefold. The tax would eliminate competition among insurance companies. It would strengthen the monoply of the licensed companies and it would furnish practically no revenue to the Government. Our Association pointed out these facts to Sir Henry Drayton in a letter under date of May 7th. Similar representations were made by the Canadian Manufacturers' Association. It is gratifying to be able to report that Sir Henry Drayton finally decided not to impose this tax. More detailed reference to the matter will no doubt be made in the report of your standing Committee on Insurance.

The Government Sales Tax

Quite one-half of the correspondence of your secretary during the year 1920 was the result of the Government Sales Tax. As soon as the intention of the Government to impose such a tax was announced letters commenced to pour into the Secretary's office asking for information. Members will all recall the fact that there was great confusion during the first two months and that not even the Finance Minister himself, nor the Deputy Minister of Inland Revenue, nor anyone else with whom we could get in touch, seemed to know how the tax was to be collected, what lines were to be taxed, or how much the tax was to be in any particular case. Your Secretary endeavored to keep in touch with the latest rulings on this subject throughout the year and to advise members promptly when any changes were made. Through Mr. E. M. Barrett, of Ottawa, our Vice-president, and Mr. Frank Hawkins, Secretary of the Canadian Lumbermen's Association, Ottawa, we are kept in very close touch with the latest rulings given out at Ottawa, and our interests were represented upon several different occasions when deputations called upon the Department to obtain rulings or to present our point of view. It was most fortunate that during the first few months of the imposition of this tax, the reatil lumber dealers were able to present their views as a unit, and to distribute the rulings of the Department promptly to the whole trade.

Drafting of Standard Order Form

At our Annual Meeting last year a resolution was carried instructing the committee on Trade Relations to draw up a standard order form to be published in the Monthly Bulletin, so that members could express their opinions upon it to the Secretary. The Committee took this matter in hand early in the year and, after a number of meetings, decided upon a form which was subsequently published in the Bulletin. This form met with almost complete approval on the part of our members, though a few amendments were suggested, and some of these have been included in the form in its present shape. Finally, the form as amended was approved by the Trade Relations Committee and printed forms were sent to all dealers in Ontario, who were advised that copies could be obtained through the Secretary at a price of $6.00 for five hundred. The forms are printed in duplicate, one copy to be given to the seller and one to be retained by the dealer. Your Committee on Trade Relations will report in detail upon the matter. It remains to be reported, however, that the Wholesale Lumber Dealers' Association, at their Annual Meeting, on January 28th, held a discussion upon this subject, the result of which was that a motion was carried as follows: "That this Association having its attention drawn to the Ontario Retail Lumber Dealers' Association Standard Form would respectfully request and suggest to the Ontario Retail Lumber Dealers' Association the propriety of just consideration of this matter with a committee appointed by the Wholesale Lumber Dealers' Association, before this order form is published and issued for general acceptance, and that a copy of this resolution be forwarded to the President of the Ontario Retail Lumber Dealers' Association with a request for consideration at an early date."

In connection with this subject it should also be reported that one of the members of our Association has suggested to the Secretary that it might be advisable also to draw up a standard order form to be issued in connection with contracts between retailers and their customers.

Consideration of Traffic Matters

At our meeting last year we discussed the advisability of creating a traffic department of the Association. Your secretary was instructed, by a motion carried at that meeting, to make inquiries as to the opinions of members of the Ascsociation regarding this proposal and to take steps for carrying it out in case it met with general approval of the association. Your secretary was also instructed to communicate with the wholesalers to ascertain whether they would be disposed to co-operate in the creation of a joint traffic bureau representing the two associations. After discussing this matter with some of our members your secretary found that there was considerable division of opinion as to whether it was feasible and how it could be caried out. He considered that it was advisable to allow the matter to remain standing for the time being and to submit it again as this annual meeting. The Wholesale Lumber Dealers' Association to whom our suggestion of a joint bureau was presented did not consider it advisable to take such a step. Since that time the Canadian Lumbermen's Association has held its annual meeting and has determined upon the creation of a traffic department in connection with which they will employ the best talent available in the market in the form of an experienced traffic manager. It is possible that some of the more important difficulties confronting the retail trade may be dealt with after the Traffic Department of the Canadian Lumbermen's Association gets into operation.

Little Progress on Grading Rules

A resolution was carried at our last annual meeting to the effect that we should submit to the Wholesale Lumber Dealers' Association and the Canadian Lumbermen's Association a proposition for holding a joint conference of representative committees from the three associations to consider the matter of establishing grading rules for lumber. Neither the Wholesale Lumber Dealers' Association or the Canadian Lumbermen's Association are as yet prepared to co-operate in such a proposition.

Shortage of Skilled Mechanics

This subject has been discussed to a small extent at some of our previous meetings, but never in a serious manner. This year it has been submitted to us by the Toronto members of our Association who are much concerned about the future of the woodworking industry because of the fact that good mechanics and bench hands are scarce and very little is being done to produce new ones by training young lads for such positions.

We have thought it advisable this year to consult with the Toronto Technical School with a view to finding, whether by co-operation with that Institution, it will be possible to improve the situation. We have been fortunate in obtaining the presence at our Convention of Dr. A. C. MacKay, Principal of the Toronto Technical School who will discuss the matter with us and give us the benefit of his views. He believes that a plan can be worked out for co-operation between the School and the woodworking plants which will result in the training of a large number of young men for positions of this kind.

Good Work of Local Branches

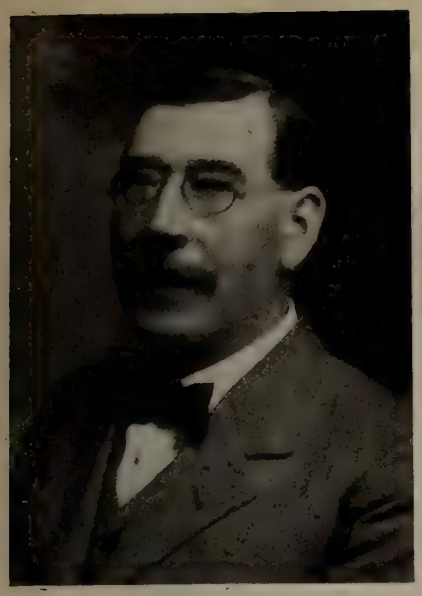
While we have not established as many local branches of the Association as yet, as we would like to see, it is possible to report interesting progress in this connection during 1920. Our Local Associations which were already established, have all held many interesting meetings, with the exception of our Northern District, which unfortunately covers such a wide area of country that effective organization is not as easy a matter as it is in the more closely settled parts of the Province. It is very encouraging, however, to report that a most enthusiastic gathering of dealers in the Niagara Peninsula was held on January 22nd and a splendid Local Branch was organized, with Mr. K. J. Shirton of Dunnville as Chairman.

Insurance and Workmen's Compensation

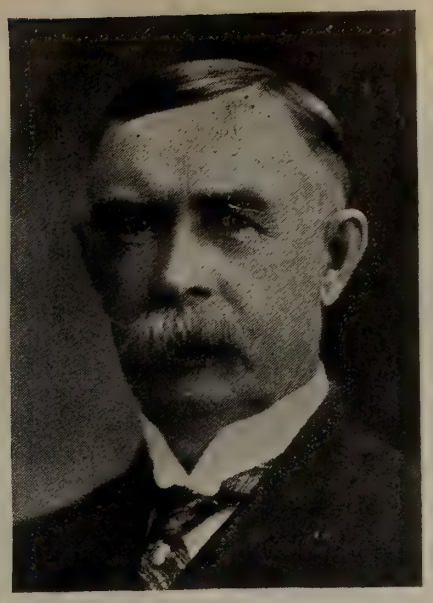
W. C. Laidlaw, of Toronto, read the report of the committee on Insurance and Workmen's Compensation at the annual meeting of the Ontario Retail Lumber Dealers' Association.

Under the heading of insurance, two important matters have come to the attention of your Committee during the past year.

Early in the month of April, 1920, a report was current in the



Thomas Patterson, Hamilton
Past Pres. and new Director of O.R.L.D.A.



W. C. Irvin, Toronto
Newly elected Director of O.R.L.D.A.

John Wallace, London
Newly elected Director of O.R.L.D.A.

Grant P. Davidson, Ottawa
Re-elected Director of O.R.L.D.A.

press to the effect that Sir Henry Drayton, Minister of Finance, was contemplating the imposition of a tax of 15 per cent. upon unlicensed insurance. Such a tax would have been a heavy burden upon retail lumber dealers, who place a large part of their insurance with Companies of this class. Our Association wrote to the Minister of Finance, under date of May 7th, and pointed out to him that such a tax would eliminate competition among insurance companies. It was also pointed out to the Government that such a tax would furnish practically no revenue to the Government. A number of years ago a similar proposition had been proposed, but had not been put into effect. We believe that the stand taken by our Association and by representatives of other Canadian industries persuaded the Minister of Finance that the imposition of such a tax would not be advisable. Up to date no steps of this sort have been taken.

Proposed Anti-Shingle Legislation

In September, 1920, a proposal was brought forth by J. B. Laidlaw of the Norwich Union Fire Insurance Company of Canada, who urged that legislation should be introduced prohibiting the use of wooden shingles on any building erected in Ontario within fifty feet of an existing building, and also prohibiting the repair of a shingle roof, if the amount of the repair equalled 30 per cent. of the roof. While this is properly a matter to be considered in detail by your Committee on Legislation, it is closely akin to the subject of insurance, and we, therefore, wish to make a short reference to it. This proposal was presented before the Annual Convention of the Ontario Fire Prevention League, and a resolution was carried in favor of introducing a Bill of this nature, during the present Session of the Ontario Legislature. The situation was watched very closely by your Committee and by the Officers of the Association. There were other lumber Associations which took very active steps in connection with this matter, and if a Bill had been introduced, our Association would have been asked to declare its stand in connection with the situation. Fortunately, however, the publicity given to the matter by the members brought out such vigorous opposition on the part of the public that, according to our well informed advice, we understand that the Fire Prevention League, has decided to postpone the introduction of the Bill for one year. We are also advised that they intend, during the coming year, to carry on a strenuous educational campaign with a view to the introduction of a Bill, possibly even more drastic, at the 1922 Session of the Ontario Legislature. We are pleased to be able to report that for the time being, the danger of such a Bill being enacted has passed by, but we would suggest that our Association discuss this matter thoroughly and instruct the Officers of the Association in regard to the stand they may desire to take in case the danger is only postponed.

Workmen's Compensation

The report of the Workmen's Compensation Board for 1920 shows a large increase in accidents as well as a large increase in total amount of awards. The total of 54,851 accidents were reported in 1920, which is an increase of 10,591 over 1919. The fatal accidents reported during 1920, were 452 as against 429 in 1919, being an increase of 23.

There was a total average per day of 183 accidents or one accident for every three minutes of the working day.

The amount awarded for Compensation during the year 1920, was $7,076,439.59, and the amount for medical aid, $703,705.66, making a total of $7,780,145.25, as against a total of $4,192,859.93 during 1919; and $3,884,000 during 1918. The Board is paying out $26,000 a day Compensation. It is estimated that over 100,000 people every year are receiving some part of their maintenance from the benefits provided for by the Act.

The total yearly Wage Roll of Industries covered by the Act, is estimated at $450,000,000.

The striking thing, of course, is the huge increase in cost in 1920 over 1919 figures. This increase of $3,500,000 is a serious addition to the already heavy burden on Industry.

What are the causes of this huge increase? First of all, there is the increase in the Compensation last year from 55% to 66-2/3%. Even if the number of accidents had remained the same, these would have meant considerable increase in the total amount of Compensation paid; but the startling fact is that with the number of workmen practically unchanged, the number of accidents in 1918 was 47,000, in 1919, 44,000, and in 1920, 54,000; or an increase of over 10,000 accidents.

There are reasons for believing that this result is largely due to the increase in benefits. In other words, that there has been malingering.

Reduction of Industrial Accidents

To understand this situation, one must bear in mind that the majority of accidents are Short Period Disability Cases. 50% of thecases are two weeks or less, 90% are seven weeks or less.

We believe that there is need for the operation of a well organized Safety Association, looking to the reduction in the number of accidents. We need careful inspection. We need co-operation in following the recommendations of the inspectors. We need the wholehearted interest of each employer in the question of Safety. We need to impress the idea of Safety on the men themselves. Further, we need each employer to follow each accident, and to see that there is no malingering. If each one of us, in the Lumber Group, determines that during 1921 no man will be permitted to fake an accident, or that no doctor will be allowed to assist in any such fake, we may go a long way towards reducing our Premium for Accident Insurance.

Reports have been current during the past months that during the present Session of the Legislature, an effort will be made by the Labor Party to have a Bill enacted which will increase the compensation paid to injured workmen from 66-2/3% of the wages received at the time of the accident to a full 100%. Similar reports are current in regard to proposed increases in the payments made to dependents. These are matters of very serious import to all employers of labor, and your Committee suggests that this subject be discussed carefully during the present meeting with a view to preparing a forcible resolution upon the subject. One of our members has submitted a suggestion in connection with this matter to the effect that in case the workmen are allowed 100% compensation, they should be required to contribute 33⅓% towards the compensation fund. He suggests that this might be handled locally by each shop under the control of a Shop Committee. Under such a plan the Shop Committee would see that the man was back on the job as soon as he was fit. This member reports, however, that he is strongly opposed to 100% compensation, because it would undoubtedly put a premium upon absence from work.

Legislation and Transportation Matters

B. F. Clarke of Glencoe, chairman of the Committee on Legislation and Transportation, presented a comprehensive report, in which he said: The most important matters coming under this head are:

Mechanics' Lien Act.
Prohibition of Wooden Shingles.
Workmen's Compensation Act.
Ontario Business Assessment Act.
Sales Tax.

The Mechanics' Lien Act is still dragging on. The present Attorney-General, after advising that a committee would be appointed last session to consider the situation, changed his mind and decided to ask the York County Law Association to appoint a committee to draft a new act. We are advised by Mr. Jennings, our solicitor, that this is an unfortunate situation, as the York County Law Association are more interested in preserving the rights of mortgagees than in the rights of supply men; in fact, their chairman has advised Mr. Jennings that the supply men are not going to get any more protection than they are getting. Mr. Boultbee and Mr. Jennings had an interview with the Attorney-General on February 4th.

Keep An Eye On Wooden Shingle

You are all familiar with the wooden shingle situation. The Fire Prevention League seem to have adopted the U. F. O. method of class legislation, or the metal and prepared roofing manufacturers have presented a very one-sided case to the League. However, through the united efforts of the B. C. association and I think nearly every lumberman in Canada, and the publicity given the matter by the Toronto Star, Mr. George F. Lewis, secretary of the league, decided to drop the matter for a year. Much credit is due Mr. Horace Boultbee for the efforts he made to fight this legislation, and we are fortunate in having such a man as secretary of our association. If he had been sleeping on the job, things may have been different. Local associations should keep this matter in mind, and bring it to the attention of their local members whenever possible.

The Workmen's Compensation Act will be referred to in your insurance report. An effort was made to increase the compensation to 100 per cent., but this was turned down in the house.

There has been no change in the Business Assessment Act. Owing to the change in power in the Local House, our past efforts were wasted, but we now have the matter before the Attorney-General, and hope to get the Government to introduce an amendment for the purpose of reducing the assessment of lumber yards to the same level as other businesses of a similar nature.

Wish to Absorb the Sales Tax

Mr. Kalbfleisch, of Stratford, has advised me that their local association has passed a resolution to ask the Government to allow planing mills to absorb all the Sales Tax. The reason for this was that some of the dealers who do not manufacture lumber, sash, doors, mouldings, etc., and who buy them manufactured, are not required to add sales tax and are selling their material at the same price as the ones that manufacture, but who have to add sales tax. This matter might be considered at this meeting.

Last year there was some talk of establishing a traffic department. There seems to be considerable difference of opinion on this subject, and it might be advisable to discuss this also at the meeting. The Canadian Lumbermen's Association at its annual meeting held in January, decided to establish a traffic department, in charge of an experienced traffic manager, and it may be possible by co-operation with this body to obtain some of the results desired.

Standard Order Form Adopted for One Year

After reading of the report of Secretary Boultbee and those of the committees on Workmen's Compensation and Insurance and Legislation and Transportation (which appear on another page of the 'Canada Lumberman") President Reid referred to the standard order form, which had been draughted and printed. He explained that the committee had been working on it for months and had got the best legal advice. He was strongly in favor of its adoption, as he believed it was for the benefit and protection of the retail dealers of Ontario. The wholesalers had, at the last minute, asked for some revisions in the standard order form. Their objections had been considered by the Executive and the directors had decided that the order form was good enough for them and should be tried out by the O.R.L.D.A. for at least one year, when, if necessary, it could be amended.

The president outlined the important features of the standard order form, particularly with respect that an order must be confirmed by the head office of the seller within so many days of date of the order, and if the order was not so confirmed, it would be void at the expiration of the time limit. Another advantage was the clause that all material not up to grade and specifications, whether in part or whole carloads, could be unloaded or held at the shipper's expense and disposition, and also the reference to the fact that the buyer was authorized to use all or part of any shipment found to be up to grade, and in accordance with the order and any stock below the grade, to be held for the count of the shipper and at his own risk. If there was an unreasonable amount below grade, the buyer would have the right to reject the whole carload. A copy of the standard order form appeared on page 56 of the February 1st edition of the "Canada Lumberman."

It was moved by E. C. Russell and seconded by Allen Watt, that the standard order form be adopted and tried out by the O.R.L.D.A. for twelve months. This was carried unanimously.

Operation of Compensation Act Debated

In regard to the importance of the Mechanics' Lien Act, which was referred to in the report on Legislation and Transportation, Mr. Reid said the members of the O.R.L.D.A. should use all their influence with their local M.P.P.'s in asking them to support the new and improved bill which was being brought before the House.

In the discussion of the report of the Committee on Insurance and Compensation, which was presented by Walter C. Laidlaw, the chairman, some references were made to certain working men faking in order to get the compensation. Mr. Laidlaw pointed out that in the case of some employees, there was malingering in order that greater returns might be drawn from the fund in the way of compensation. He thought all cases should be followed up carefully and flagrant violations reported to the Board. It was also necessary to see that proper safeguards were provided in their plants and to encourage the Safety spirit among the employees so that one workman, in observing a careless practice on the part of another workman, would call his attention to it and endeavor to have the indifferent one see the error of his way.

Guy H. Long, of Hamilton, said that he regretted some physicians were willing to assist dishonest workmen in taking advantage of the act. As employers, they should do everything they could to get this legislation as nearly up to the mark of being right as possible. In his opinion, the regulations were better looked after in the larger cities than in the smaller places. Mr. Long referred to one or two instances of feigned injuries, which had come under his notice, and advised vigilance on the part of all employers.

Many important resolutions were passed by the convention. These will be found in another column of the "Canada Lumberman." Briefly, some of the outstanding things done were the adoption of the standard order form for one year, and a resolution favoring the continuance of the efforts to have a new Mechanics' Lien Act passed; opposition an any proposed anti-shingle legislation; continued agitation to make it compulsory for labor unions to become incorporated; approval of the policy of forest conservation for the province of Ontario; the necessity of further local branches and the opposition of any increased compensation to workmen under the present act.

Planing Mills Would Absorb Sales Tax

In regard to the recommendation of the Stratford District that the O. R. L. D. A. petition the federal government to allow planing mills to absorb the tax, there was a lively discussion. The Stratford branch asked that this resolution be carried for the reason that some of the dealers, who do not manufacture lumber, sash, doors, mouldings, etc., and who buy them manufactured, are not required to add sales tax, and are selling their material at the same price, as the ones that manufacture but who have to add the sales tax.

President Reid said that, according to the present regulation, where a retailer operates machinery for the further processing of lumber, excluding ripping, resawing and butting, (which is not regarded as manufacturing), he is regarded as a manufacturer to this extent and, on the value of all such worked material, must pay a tax of two per cent. Only one per cent. of this need be charged and shown on the invoice if the retailer so wishes, but he must turn over to the government two per cent., thus absorbing the one per cent. Where a retailer sells a portion of his stock in exactly the same condition as he received it, whether sold to a contractor or a consumer, there is no tax. The tax must be shown on the invoice handed to each customer.

J. T. James, of Bridgeburg, stated that showing the two per cent. on every invoice of manufactured stuff leaving his mill and yard, involved considerable clerical work and bookkeeping. He had been absorbing the tax for some months and in making up his monthly statements of sales, he had shown a total of the amount sold, which was

manufactured by him and subject to the tax. He had handed this sum into the customs officers who were the local collectors of the sales tax and no questions had been asked. This greatly reduced all work in connection with the tax and eliminated the necessity of showing a separate entry on every invoice that went out to a customer.

George H. Belton, of London, stated that in milling-in-transit a tax had to be paid only on the cost of the milling charge and not on the value of the stock. Where material was milled on one's premises the two per cent. of the total value of the stock had to be levied.

Finally on motion of E. M. Barrett, seconded by J. T. James, a resolution along the lines of the request of the Stratford District was carried to the effect that the government allow planing mills to absorb all the sales tax.

Strongly Favor Tax on Turnover

Another important motion, which was carried during the second day's session of the convention, was one proposed by W. C. Laidlaw, of Toronto. It was to the effect that the convention go on record as favoring a substitution for the present complex and irritable sales tax, a simple form of tax on turnover, based upon monthly sales and paid by the man who makes the sales.

Woodworkers Hold Safety Session

During the afternoon of the second day an interesting session was held of the Woodworkers' Group of the Industrial Accident Prevention Association. W. C. Laidlaw, chairman, presided, and a rousing and instructive address was delivered by F. M. Tobin, Toronto, secretary of the Industrial Accident Association, which is composed of ten or twelve groups, of which the woodworkers constitute one. A resolution was passed, urging that the Government impose a surtax on manufacturers who do not provide guards for their saws, or who refuse to comply with the recommendations of the inspectors to put on such guards.

Mr. Tobin gave some startling figures, showing how accidents could be reduced by whole-hearted and sympathetic interest on the part of both employers and employees in the safety movement. He impressed upon those the danger of leaving machinery unprotected and drew attention to the fact that out of 628 accidents in the woodworking industry last year, no less than 173 were caused by the circular saw. As the whole body of wood manufacturers are assessed under the act, he thought it an injustice that the most careful should be penalized for the failure of others to take proper precautions. A hearty vote of thanks was tendered Mr. Tobin for his splendid address.

Order Form for the Customer

O. W. Rice, of Welland, said he would like to see an order form drawn up which might be used by the members of the association in connection with all sales to customers. If such a form were used, he thought there would be no exception taken to it by the contractors. He then moved, seconded by E. C. Russell, that the incoming Executive draw up an order form to be used by retailer and customer when finally approved by the association. This was carried.

Manufacturers Selling to Catalogue Houses

B. F. Clarke, of Glencoe, brought up the matter of certain manufacturers of sash and doors selling to mail order and catalogue houses, who were conducting an active campaign against the retail lumber dealer by means of an extensive system of publicity. Conferences have been held with the manufacturers and they had been asked what their attitude was in the matter of marketing their output through the legitimate distributors, viz., the retail lumbermen, rather than by means of concerns which were engaged in cut-price business and had no active interest in the lumber trade. The manufacturers so far had not given any definite promise to the retail lumbermen that they would confine their distribution to the ordinary channels, and there the matter stood at the present time.

J. C. Scofield, of Windsor, said one company in particular had been very aggressive in the matter of sending out catalogues in the Southwestern Ontario district and his experience was that most of those, who had anything to di with such organizations, never patronized them again. With the mail order proposition, it seemed to be that one could catch a sucker once, but never twice.

More Advertising—Hardwood Floor Week

Mr. Scofield went on to state that the dealers should do some advertising and get out among prospective builders and customers. It was necessary to adopt modern merchandising methods. He related an instance that had come under his attention across the border a few years ago, when the manager of a certain business was surprised to find that Mr. So and So had ordered a complete mail order house from a Chicago concern. Mr. Scofield had asked him if he knew this gentleman intended to build, and the reply was "Yes." "Did you get out and see him?" enquired Mr. Scofield. "No," responded the speaker, "I was waiting for the gentleman to come in and see me." Mr. Scofield declared that it was necessary the retail lumbermen should do more advertising to sell their stuff. He referred to the recent success of "Hardwood Floor Week" in the Border Cities, which his firm, the Windsor Lumber Co., and the Seaman-Kent Co., had put on. Arrangements had been made with many hardware merchants to place their windows at the disposal of the Seaman-Kent Co., with several "Dealer Helps." Ideas and mottos were placed in the window, while the hardware man gained from the display of samples of hardwood flooring by showing brushes, varnishes, mops, waxes and other things. The Seaman-Kent Co. had taken a whole page in a daily paper for one week. The central portion of the advt. was used for pointing out the merits of hardwood flooring, its beauty, comfort, convenience and economy, and around the outside of this were the announcements of the Windsor Lumber Co., and those of several hardware firms. Then a vacant store had been leased where demonstrations were given of hardwood flooring, and citizens were invited to call and ask any questions regarding price, quality, method of laying, etc. The result of the "Hardwood Floor Week" was that much interest was aroused in hardwood floors in the Border Cities, in fact nearly everybody was talking about them, and it was expected that a good deal of business would result.

Mr. Scofield closed with the statement that it was necessary for several of the lumber dealers to waken up in merchandising methods or the mail order people "would put it all over them."

Favors Fire Prevention Campaign

H. A. L. Swan, of Ottawa, who is a member of the Committee on Insurance and Compensation of the Ontario Retail Lumber Dealers' Association, sent in some interesting memoranda which was incorporated in the report. The memorandum read in part: "Insurance is not a commodity, but a necessary overhead charge and should, of course, be reduced to the smallest item consistent with proper protection.

"I would suggest that as a means of assisting future committees of the association that all members be specially requested to make notes of the various problems met with during the year and forward the information to the respective chairmen.

"I believe that a Fire Prevention Campaign put on along the lines of Safety First would be timely and labor well spent, and that lumbermen and their associates should go on record in support of the proposed amendment to the Criminal Code by the Dominion Government, which provides for heavy fines and a maximum of two years' imprisonment for any person who fails to carry out instructions and improvements received from a proper official, or for any one who owns, occupies, or controls any premises in which a fire might occur through negligence. At first glance this amendment might appear drastic or that fire insurance companies were responsible for its enactment, but this is not the case. There is no question, however, but that some strong measures are necessary with the object of preventing the economic waste that takes place every year through preventable fires and the stigma rests with associations such as ours.

Sparks on Roof Cause Few Fires

"With regard to wooden shingles, it would appear that in some quarters, there has been a decided effort to show that wooden shingles are a menace to insurance risks, and in view of this I feel that concerted effort of rebuttal should be introduced at once. From my limited knowledge, I am of the opinion that wooden shingles have not contributed to the fire losses. I have before me a report of fire losses in the United States for 1919-1920 which shows among other items that the causes of fire in that country attributed to "Sparks on Roofs" (including shingles and all other classes of roofs) was 2.36 per cent. as compared with fire caused by matches, smoking, etc., 5.82 per cent.; exposure, including conflagration, 22.51 per cent., and from unknown causes, probably largely preventable, 33.10 per cent., showing that all down the line to make the 100 per cent. loss from fire in the United States for the period mentioned, the "Sparks on Roofs" is the smallest by far in the percentage of causes. No doubt, you will be able to augment this information and if you so desire, I can furnish you with a copy of the report referred to."

Mr. Swan then made reference to the resolution of J. B. Laidlaw, which was passed at the annual meeting of the Ontario Fire Prevention League. He strongly urged the Ontario Retail Lumber Dealers' Association to take action along similar lines to what the Canadian Lumbermen's Association did at Ottawa. The latter passed a resolu-

tion against the proposed legislation which would prohibit the use of wooden shingles or other combustible material as a roof covering on any building hereafter erected nearer than 50 feet to an existing structure, and also prohibit the extensive repair of any existing roof composed of wooden shingles or other combustible material. The Canadian Lumbermen's Association adopted a motion that they co-operate with all parties interested in opposing the proposal.

In connection with Hon. Mr. Justice Masten's report in regard to a tax on unlicensed insurance companies, Mr. Swan said he did not believe that they should acquiesce in permitting unlicensed companies to operate in Canada without paying some tax. He did think, however, that this tax should be a moderate one, one that will not result in the tariff companies monopolizing the business, or one that would increase the rates of the unlicensed companies to such an extent as to interfere in their competing in rates. * * * With the increase in fire-fighting apparatus and men, including the double platoon system, some efforts should be made to have the rates reduced.

Insurance for the Unemployed

"With regard to Unemployment Insurance, I believe that to favor anything like Unemployment Insurance in Canada would tend to fertilize the soil of socialistic propaganda (like the Compensation Act, the inclination to get something for nothing, is altogether too prevalent and should not be encouraged). It is true that England has recently put into effect such a law and has made it a compulsory insurance against unemployment to practically all persons in receipt of remuneration not exceeding £250 nominally about $1,250 a year. In Canada, there are many objections, amongst which are the unsteadiness of employment in districts and the constant shifting of workers over a large area of country and also the necessity to highly organize industry to enable the employer to meet competition. It could hardly be adapted to farming, lumbering, fishing, railroad construction and other work of seasonal nature. The system would be inconsistent with Canada's much advertized "Land of Opportunity" for the working man. In fact, the whole field would have to be gone over again to tell those prospective immigrants that the margin between possible earnings and starvation here is so narrow that the Government had to provide a living dole for those out of work. No, let Canada be known as a field for those who have the physical and moral strength to meet conditions, whatever they are, and that by overcoming them, all secure comfort and competence. Let Canada be known as the field of "Labor and Assurance," instead of "Unemployment Insurance."

Mr. Swan touched upon Unemployment Insurance and the schemes of unemployment in various countries, which he said fell into two main classes.

"(1) The plan of insurance in operation in several countries at present is that generally known as the "Ghent System," because first successfully organized in that city. The underlying principle of the Ghent system is that of giving government assistance to trade union unemployment insurance. Thus, under this form of insurance when a workers' organization insures its members against unemployment, a contribution is made to the unemployment fund by public authority. The contribution is sometimes made by a local, sometimes by a central authority, and occasionally by both local and central authorities. Employers under the Ghent system make no direct contribution to the unemployment fund, and unorganized workers are not assisted.

"The second type of unemployment insurance is compulsory insurance of workers on a national basis, involving contribution from employers, workers and the state. This type of insurance has been adopted by Austria, Great Britain and Italy.

"In Sweden and Switzerland measures are enforced which are not properly methods of insurance but are similar to the emergency donation plans adopted after the war in several of the belligerent countries. These schemes of unemployment relief would require a lengthy memorandum.

Strongly Opposed to Unions' Demands

In regard to the Workmen's Compensation Act, Mr. Swan made reference to the Executive of the Trades and Labor Congress of Canada, which waited upon the Ontario Government in December last and pressed for several reforms, among them amendments to the Workmen's Compensation Act, making it compulsory that all cases of accident be reported by the employer no matter whether the man so injured leaves his work at the time or not; to increase the percentage of wages to be paid during accidents; to fix a minimum sum for permanent disability, etc., in harmony with the present cost of living, and the payments fixed prior to this date be revised in accordance with the minimum.

Mr. Swan then touched upon the resolution passed by the Canadian Lumbermen's Association in opposition to any increases at the present time in the rates of compensation under the Compensation Act of Ontario; and also to any step looking to the introduction at the present time of any legislation of establishing old-age compensation or Unemployment Insurance in Canada. (A copy of this resolution appearing on page 47 of February 1st edition of "Canada Lumberman.")

Picked up Around Convention Hall

The Resolutions Committee of the O.R.L.D.A. was composed of W. M. Tupling, of Orillia; J. C. Scofield, Windsor; E. M. Barrett, Ottawa, and Secretary Boultbee. They had a lot of work to look after, but they did it expeditiously.

The oldest members of the O.R.L.D.A. present were Wm. Laking of Hamilton, and James Harriman of Niagara Falls. Both of these gentlemen, although considerably past the three-score mark and ten, are active, hale and hearty.

It was decided to hold the annual picnic for 1921 in August, the same as in the years gone by. Last year the trip was to North Bay and the French River, and was a splendid success. It is probable that the visitors this year will go up the North shore and visit Manitoulin Island. Other pilgrimages have been suggested, but the matter of arrangement was left to the new executive.

On motion of Thomas Patterson, seconded by J. C. Scofield, expressions of sympathy of the association will be sent to the families of the late James Sparling of Meaford; A. C. Reesor, Locust Hill; Arthur Ludlam, Leamington, and Robert Dixon, of Grand Valley, all of whom passed away during the last year. Each was a faithful member of the association. Another motion, which was received with hearty applause, was one proposed by J. C. Scofield and E. M. Barrett that the thanks of the O.R.L.D.A. were due to the Seaman-Kent Co., Toronto, for their splendid entertainment.

The selection of Ottawa as the convention city for 1922 proved to be a popular one, as the major portion of the members, living in western Ontario, have never visited the Capital of Canada. It is probable that in 1923 the convention will go to Windsor, Ont., where the present vice-president, Mr. Scofield, makes his home.

Several interesting souvenirs were given out to the visitors in the shape of lead pencils by the Gall Lumber Co., Toronto, cigarettes by the Boake Mfg. Co., Toronto; leather-covered note books by the Seaman-Kent Co., Toronto; leather billfolds, by Terry & Gordon, Limited, Toronto, and bronze match boxes by the Lumber Mutual Fire Insurance Co. of Boston, through their representative, John C. Artz, of Rochester.

The Membership Committee report was a gratifying one, showing that in the beginning of 1920, 160 retailers belonged to the association, and at present there are 182. The report of the Treasurer also showed that there was a substantial balance on the right side of the ledger.

E. M. Barrett, the new president of the association, is a member of the firm of Barrett Bros., Ottawa, who are large employers of labor and run a flourishing woodworking establishment. Mr. Barrett has been an active vice-president and is one of the chartered members of the association. He is a worker and will, no doubt, give a good account of himself during his term of office.

President Reid made an admirable chairman and kept everything moving with precision and harmony. J. B. Reid, T. H. Hancock and W. C. Irvin were appointed on the Trade Relations Committee for the coming year. It was thought by the members of the association that, when called upon to adjust some difficulty or settle a dispute, the members of the committee should not be expected to give their services free of charge, as they might be called upon many times to function in numerous petty matters. The association empowered the committee to levy a reasonable amount for their services. Not one of the members is anxious to make any money out of the work, but it was felt that each should, in a measure, be reimbursed in some small way for his time and attention.

The moving picture entertainment put on by the Seaman-Kent Co. of Toronto, manufacturers of hardwood flooring, was much appreciated. A couple of comic films were shown and the manufacture of "Beaver Brand" hardwood flooring from the stump right through all the various stages until laid in an attractive ballroom. Upon its smooth surface many young people were seen disporting themselves in the mazy two-step to their hearts' content. The series is instructive, and to complete the picture it was necessary to use 1,000 feet of film. The company owns a number of these films, which have been shown in leading theatres across the continent. The Seaman-Kent Co. also engaged the Maple Leaf Boys' Club to furnish music, and there were a couple of sparring matches between two agile lads pulled off in regulation style. This "mill" aroused a great deal of interest. The firm also had a catchy display in an adjoining room. Their "Dealer Helps" advertising, consists of various artistic signs, figures, mottos and other adornments, setting forth the merit, beauty, finish and variety of Beaver Board flooring. The entertainment features were arranged by the Sales Department of the company, Frank Kent, W. T. Cole, D. M. Heise and other representatives were present.

The Roll Call of the Lumbermen Delegates

The following are the delegates who registered at the Ontario Retail Lumber Dealers' Association convention held in Toronto on February 15 and 16:

Aitchison, W. J., D. Aitchison & Co., Hamilton, Ont.
Anglin, Chas. S., S. Anglin & Co., Kingston.
Armstrong, F. G., The Opeongo Lumber Co., Pembroke.
Armstrong, M. H., Nicholson Lumber Co., Burlington.
Bailey, A. Hagersville.
Bailey, W. J., Jarvis.
Baird, D. C., St. Mary's.
Barraclough, Fred., Cayuga Planing Mill Co., Cayuga.
Barrett, E. M., Barrett Bros., Ottawa.
Belshaw, J. B., J. T. Belshaw & Sons, Stirling.
Belton, Geo. H., Geo. H. Belton Lumber Co., London.
Boake, G. W., Boake Mfg. Co., Ltd., Toronto.
Bogart, M. R., S. Hadley Lumber Co., Ltd., Chatham.
Bond, J. S., Batts, Limited, 374 Pacific, Toronto.
Bond, T. G., Batts, Limited, 374 Pacific, Toronto.
Boshart, John, B. & N. Planing Mills, Milverton.
Bowden, C. W., Bowden Lumber Co., Greenwood Ave., Toronto.
Bowden, H. V., Bowden & Sons, Ltd., Toronto.
Braniff, C. J., McLaren Lumber Co., Ltd., Brockville.
Brennen, H., Dominion Lumber & Coal Co., Hamilton.
Bryan, F. W., McPherson & Clarke, Glencoe.
Cluff, J. J., H. Cluff & Sons, Seaforth.
Coates, C. L., A. Coates & Sons, Burlington.
Cole, W. T., Seaman Kent Co., Toronto.
Comstock, M., McClellan & Co., Ltd., Bowmanville, Ont.
Cooper, S., Cobourg.
Crosthwaite, H., Patterson & Crosthwaite, Hamilton.
Cummings, F. J., Kingston Road Lumber Co., Toronto.
Dagneau, L., C. & J. Hadley Co., Ltd., Chatham.
De Laplante, B., Beaver Lumber Co., Hamilton.
Dick, A., McDonald Lumber Co., Ltd., Peterboro.
Dixon, G., R. Dixon & Sons, Grand Valley.
Doty, C. F., Davis & Doty, Oakville.
Doyle, T. J., P. G. Piggott Lumber Co., Chatham.
Dryden, R. G., Toronto.
Eaton, M. H., Seaman-Eaton Flooring Co., Toronto.
Emery, W. B., Marlatt & Armstrong Co., Oakville.
Fahner, E., R. E. Butler Lumber Co., Woodstock.
Fortune, O. E., Gill & Fortune, Trenton.
Free, J., Mimico.
Gardiner, J. E., P. W. Gardiner & Son, Galt.
Gill, E. I., Sheppard & Gill Lumber Co., Toronto.
Gilchrist, J. T., J. T. Gilchrist Lumber Co., Toronto.
Gilchrist, J. C. Jr., J. C. Gilchrist Lumber Co., Toronto.
Gillies, James, Preston.
Gorvett, W. G., Arthur.
Hadley, C. S., S. Hadley Lumber Co., Chatham.
Hain, A., Watt M. & F. Co., Toronto.
Hale, A. F., Kernohan Lumber Co., Ltd., London.
Hancock, T. H., Toronto.
Harriman, J., Niagara Falls.
Harrison, J., Guelph Lumber Co., Guelph.
Hazen, H., Tillsonburg.
Heise, D. M., Seaman-Kent Co., Toronto.
Henderson, A., Cheltenham.
Hind, E., Edmund Hind Lumber Co., Toronto.
Houston, J. F., Houston Co., Ltd., Tweed.
Howes, J., Harriston.
Ingleby, Chas. E., Ingelby-Taylor Co., Brantford.
Innes, J. H., L. Innes & Sons, Richmond Hill.
Irvin, J. C., Irvin Lumber Co., Toronto.
Irvin, W. C., Irvin Lumber Co., Toronto.
Jackson, W. H., West & Jackson, Tillsonburg.
James, J. T., Bridgeburg.
Johnston, W. D., Georgetown.
Johnston, W. H., Pefferlaw.
Jull, H. A., Ingelby-Taylor Co., Brantford.
Kalbfleisch, E., Kalbfleisch Planing Mill, Stratford.
Kemp, Geo. D., Watt M. & F. Co., Toronto.
Kent, F., Seaman, Kent Co., Toronto.
Kernohan, Geo. N., Kernohan Lumber Co., London.
Laidlaw, W., R. Laidlaw Lumber Co., Toronto.
Laking, Wm., Riverdale Lumber Co., Toronto.
Lambert, S. L., Welland.
Lawson, Chas. C., Alliance Lumber Co., Ltd., Hamilton.
Locke, R., R. Locke & Co., Toronto.
Ludlam, H. S., Ludlam-Ainslie Lumber Co., Leamington.
Long, G. H., Consumers Lumber Co., Hamilton.
Light, J. Napanee.
Markle, W. J., Boake Mfg. Co., Toronto.
Martyn, G. H. D., R. Truax Son & Co., Walkerton.
Marsh, D., J. A. Marsh, Grimsby.
Matthews, J. A., Orangeville.
Menzies, D., Milton.
Mooning, Wm., Seaman Eaton Flooring Co., Toronto.
Morgan, J., F. A. Bowden & Sons, Toronto.
Macabe, Chas., St. Clair Construction Co., Toronto.
McCulloch, E. W., W. B. McCulloch, Brampton.
McDermid, A. L., A. L. McDermid & Co., Apple Hill.
McDonald, A. C., P. W. Gardiner & Son, Galt.
McDonald, Chas., Allan Lumber Co., Kingston.
McDonald, H. A., Barton Lumber & Supply Co., Hamilton.
McDonald, J. R., McDonald Lumber Co., Peterboro.
McGibbon, J., McGibbon, Ltd., Sarnia.
McKee, James., The Farmers Milling Co., Port Perry.
MacKenzie, Thos. E., Seaman-Kent Co., Toronto.
McKinney, A. J., McKinney Lumber Co., Woodstock.
Mason, E. P., Geo. M. Mason, Ltd., Ottawa.
McPherson, G. D., Merlin.
Naylor, J. L., Naylor Osborne Co. Essex.
Oliver, Robt., Listowel.
Osborne, A. W., Naylor-Osborne Co., Sandwich.
Paterson, T. A., Mickle Dyment & Son, Toronto.
Patterson, T., Patterson & Crosthwaite, Hamilton.
Payne, James & Son, Tillsonburg.
Penwarden, E. O., Green Lumber Co., St. Thomas.
Pounder, T. A., Pounder Bros., Stratford.
Rastall, Ross A., Rastall Lumber Co., Toronto.
Rastall, R. A. W., Rastall Lumber Co., Ltd., Toronto.
Rathbone, T. E., Geo. Rathbone, Ltd., Toronto.
Rhind, A., Simpson Planing Mill, Toronto.
Rhynas, O. W., Mickle Dyment & Son, Brantford.
Rhynas, P. O., Mickle Dyment & Son, Brantford.
Reid, Capt. G. T., Reid & Co., Toronto.
Reid, J. B., Reid & Co., Toronto.
Reid, R. E., Reid Bros. Co., Niagara Falls, Ont.
Reid, R. E., W. E. S. Sawage, Mimico.
Reid, W. I., Galt.
Rice, O. W., O. W. Rice Co., Welland.
Richards, L. H., R. Laidlaw Lumber Co., Sarnia.
Richardson, Fred., Ingersoll.
Richardson, U., Elora.
Robertson, C. R., Gatineau Co., Ltd., Ottawa.
Rose, A. G., James Davidson's Sons, Ottawa.
Russell, E. C., Walker & Sons, Walkerville.
Sanders, A. R., Sanders & Bell, St. Thomas.
Savage, W. E. S., Mimico.
Scofield, J. C., Windsor Lumber Co., Ltd., Windsor.
Shirton, K. J., Wm. Shirton Co., Ltd., Dunnville, Ont.
Smith, C. M., Aylmer.
Smith, E. S., Dominion Lumber & Coal Co., Ltd., Hamilton.
Smith, Wm. J., J. B. Smith & Son, Toronto.
Stanners, E. H., Seaman, Kent Co., Toronto.
Streight, J. E. L., Islington.
Taylor, E., Taylor & Wells, Paris.
Taylor, W. J., Watson & Taylor, Ridgetown.
Tennant, W. B., J. B. Smith & Sons, Toronto.
Thompson, R. O., Atwood.
Tupling, W. M., J. R. Eaton & Sons, Orillia.
Van Blaricom, G. B., "Canada Lumberman," Toronto.
Van Dusen, F. B., Brockville, Lumber Co., Brockville.
Wallace John, Dyment Baker Lumber Co., London.
Warwick, T. C., Blenheim.
Watt, A., Watt Milling & Feed Co., Toronto.
Watt, John, Watt Milling & Feed Co., Toronto.
Wicker, Geo. M., Wicker Lumber Co., Niagara Falls, N.Y.
Wilson, J. J., Dominion Lumber & Bldg., Co., Orillia.
Wilson, W. T., James E. Wilson, Ottawa.
Zimmerman, Geo. S., Zimmerman Brothers, Ltd., Tavistock.

The movement of softwood lumber during the last week of 1920 was the smallest of the entire year and in sharp contrast to the closing week of 1919 when a heavy demand from the consumer was being catered to. More than 50 per cent. of the normal lumber production has been shut down, for repairs, and inventorying, or because of the almost total absence of demand for their product. It is expected many mills will remain closed until more encouraging conditions appear that will permit running without accumulating large stocks and also assure a realization price above operating cost.

Buying of both softwoods and hardwoods is light. Retailers are not in the market for lumber because of the yet uncertain spring building situation. Consumers of hardwoods are affected by the liquidation going on in the lines of manufactured goods such as furniture, musical instruments, etc. Lumber prices for the most part are extremely low at the mills, but further reductions are not likely in the face of high costs of manufacture.

The Wm. Hamilton Co. of Peterborough, Ont., have recently issued a neatly printed bulletin, setting forth by suitable illustrations and complete descriptive references, their new design, steam-tension band mill for single or double cutting. The company state that this mill has been installed in some of the larger plants in Canada from coast to coast, and is meeting with an excellent reception from all mill men. Its rigid construction, compactness, simplicity in arrangements and up-to-date design, are interestingly described.

Better Training for the Future Woodworker

Ontario Retail Lumbermen Discuss Scarcity of Competent Bench and Machine Men —Technical Education Playing Big Factor in Industrial Development

At the recent session of the Ontario Retail Lumber Dealers' Association in Toronto there was an interesting discussion in regard to the scarcity and uncertain outlook of skilled mechanics in the woodworking plants of the province. In speaking on the subject, Alex. Rhind of the Simpson Planing Mill, Toronto, who has devoted much thought to the help problem, said:

To reopen the question, which was touched upon at our last convention relating to the scarcity of well-trained bench and machine mechanics and the consequent lack of stability and production in the industry which we represent, and to create discussion which may further ways and means by which the situation may be relieved, I wish to offer a few observations.

That this scarcity exists in normal times to our disadvantage is admitted and proven by the readiness with which an employee will lay off a day, rustle around to another shop, tell a story and get an offer of an advance in wages. He may start in the new job, but chances are that he goes back to his boss and states he has been offered more money. His boss meets the raise and the man stays till things look ripe for "another touch," and, believe me, "touches" were close together last summer.

As to lack of efficiency, increasing and every-varying costs in all departments in time required for stock or standard operation is proof enough. I think that because we are not making effort to train beginners and men to our line of work, that we are to blame. I think that we Canadians are away behind our Old Country folks in this regard. We are too busy, or we think we are, so have not taken the interest we should to add to the supply of help we have and need, or to replace those who work for us and who retire rich, start garages, grocer stores, real estate offices, speculative builders, etc. In view of all this, I think we might well discuss this question fully and take such action as we may decide will serve our interest.

I believe the printing trades have an understanding or agreement of employees, whereby all apprentices are indentured for a period of years at fixed wages, the employer advancing the apprentice as he becomes proficient, and after the first year he is sent to our Technical School as a part-time student at employer's expense. As the printing trades do not keep "open shop," I am not sure that this would be suitable for us to adopt, because the fixed purpose of "Organized Labor" is to retard production and their well-paid organizers are supplying a constant supply of propaganda to this end, that labor may become scarce and dear.

Manifesting An Interest In Beginners

Perhaps our better plan would be to each make effort to place some beginner in our shop and factories and then to see that his interest is maintained, work not allowed to become monotonous and that he does not become discouraged through lack of interest, through interference or from insufficient wages. I think it would be a satisfaction for any of us to know that we had made a good mechanic and a useful citizen out of a beginner. Some say, "Well, a year or two, and just as he becomes of some use to me, he leaves and goes to work for Jones for a few cents more.,, Possibly, but then you may get one of Jones' boys for your shop. Jones can't keep all the boys unless he is like a superintendent of a concern that I was with in Buffalo some years ago. This superintendent had a penchant for boys, and on our floor there were perhaps as many lads as men working.

One day the boss, a little German, who was not at all a practical man, walked through and called to the superintendent.

"John," he said, "Is all dees boys voork by us?"

John replies, "Oh, yes, some of them are growing quite smart, too."

"So, so," replies boss. "Well, John, I giff you to understand right now dat dis is von sash and door factory I put my money in. I ain't running no kindergarten."

However, there is a happy medium in all things, and our shops here are a long way from being kindergarten, at least in regard to the matter we are discussing.

In large centres, as Toronto, Hamilton, Ottawa, in fact any of our cities, could not a scheme be devised whereby a boy could serve, say, a year or two with the concern and when he had acquired some knowledge and experience, be transferred to another shop and another until he became proficient and acquired confidence in himself. Mr. Boake, of Boake Mfg. Co., Toronto, has some interesting ideas, and by the way some of the very best machine men we have, acquired their skill in the Boake plant. Mr. Boake thinks that the machine manufacturer should furnish the technical knowledge and would put it up to them. Speaking to a mechanic, a skilled operator, who was having some worry over an ugly bearing, said: "I wonder why the Technical School could not get a couple of good wood machine experts from the testing floor of the maker and then when a man gets a bearing that is acting funny, he could take it up to the school, have one of these experts diagnose the trouble and the mechanic would know what to do, should similar occasion arise."

Dr. McKay Outlines Work of School

Dr. A. C. McKay, principal of Central Technical School, Toronto, said that he had listened with interest to the remarks of Mr. Rhind and that they had opened up the whole question of industrial education. The speaker had been engaged for forty years in educational work and ideas, which had prevailed so long in the past, must give way to the new in this important matter. The prosperity of Toronto and its citizens depended on its industries and its industrial workers. In years gone by too much attention had been bestowed on the development of persons for the various professions and it had been almost forgotten that we had such a being as the industrial worker. Individually nine-tenths of the people of Toronto were engaged in industrial work along some line. The Industrial Educational Act had been placed on the statute book in 1911 and now the industrial worker could be educated and made more efficient. One difficulty of labor unions in the past has been removed; in the production of cultured, capable and progressive workers. All this could be brought about by the use of industrial material. There had been opened up several industrial courses for boys. The school took them in and encouraged them to make use of things industrial, giving them training and instruction in shop work, machine work, electricity, plumbing, metal work, making and reading drawings which the student must have before him. There was also instruction in chemistry, English, mathematics, grammar, etc. The industrial student is kept at these subjects for two years and, after he has experimented with all and obtained a good grounding, he is then able to make a selection and pursue a specialized course for the next two or three years. Dr. McKay gave further details of the various special courses and declared that technical schools were doing a magnificent work for the industrial development of the community. There were special courses for special groups giving instruction in special lines whether in the woodworking group or any other kind of work.

Dr. McKay said if the woodworking manufacturers felt that they were not getting sufficiently skilled apprentices they might take on three boys instead of two, and let the school have each apprentice a couple of half-days every week. The school would give them definite, special instruction and could do with them much better than the shops in teaching them to make and read drawings, etc. The expense of such instruction was borne by the citizens of Toronto. It was just as necessary to train and instruct the industrial worker as it was the lawyer or the doctor. The community now realized this fact and this was why large sums were being expended in industrial education and equipment of the industrial worker. In the past many boys felt that industrial work was looked down upon and that it was beneath the professions. This gross misconception has today disappeared and it was now recognized that the industrial work was dignified, and uplifting in ideas and ideals. A most expensive building had been erected to elevate the industrial worker and the one way to do this was by means of education such as could be obtained by sending apprentices and boys to the school. Employing printers are doing this with those serving their time in the print shops, and woodworkers could do the same with their boys.

In connection with a new industrial school which would be erected in Toronto in the near future. Dr. McKay suggested that if the proper machinery was not installed for the advancement of the industry and its workers, the school should be told about it. The space would be found for the equipment and also the necessary money.

In the discussion which followed the address of Dr. McKay, it was felt that the woodworking industry should take more interest and avail itself of more of the advantages of the school and that also men in the shops should take more pains and time in teaching boys.

A heatry vote of thanks was tendered Dr. McKay.

Wholesalers and Retailers at Festive Board

Banquet Tendered Ontario Lumber Merchants Marked by Enthusiasm and Bright Speeches—Hon. Beniah Bowman Outlines Timber Policy of Province

The banquet tendered the visiting retail lumbermen to Toronto on the occasion of the annual convention, was one of the most successful events of a social character that has eventuated in trade circles in a long while. The menu provided by the management of the Hotel Carls-Rite was excellent and well served and fully demonstrated the apt reference which appeared at the top of the card, "Since Eve ate apples, much depends on dinner." After an ample measure of justice had been done to the tempting dishes, the programme and toast list for the evening was inaugurated under the direction of John B. Reid of Toronto, retiring president of the Ontario Retail Lumber Dealers' Association. Choruses were sung and all joined heartily in the vocalization of several popular airs. The assisting artists were Miss Ailene Jackson, in a couple of pleasing pianologues; Wilson Duncan, in acceptable accordeon solos; Ralph Gordon, in a captivating chalk talk, and John Kelly, who delighted all with his ventriloquism.

The guest of honor of the evening was Hon. Beniah Bowman, Minister of Lands and Forests for Ontario, who gave a plain, practical business talk on the forest resources of Ontario and the need of providing timber supplies for the future, by inaugurating a wise policy of reforestation and cutting.

President Reid, in opening the proceedings, explained the aims and aspirations of the O.R.L.D.A., which he humorously remarked had been interpreted by one admirer as "Old Reid Loves the D—— Association." The organization, of which he was proud to have been the head during the past year, had grown rapidly and had accomplished good work. It had carried out many important matters and had many more under way. He referred to the necessity and importance of a new Mechanics' Lien Act and hoped that when the measure came before the Legislative Assembly Hon. Mr. Bowman would do all in his power to assist in the passing of the measure.

After the toast of "The King" had been loyally honored, "Our Guests" was received with enthusiasm and applause, and on behalf of the Wholesalers, A. E. Eckardt, chairman of the Wholesale Lumber Dealers' Association, Inc., Toronto, was asked to reply, and for the Retailers, J. C. Scofield of Windsor, the newly-elected vice-president of the O.R.L.D.A.

Mr. Eckardt Reviews Lumber Outlook

Mr. Eckardt, who was given a splendid reception, touched upon many matters of mutual interest to both the wholesale and retail trade. He congratulated the promoters of the organization on the success and development of this important provincial body, many members of which had risen to influential positions in their home towns. He reciprocated the kindly spirit in the remarks of the chairman of the evening and was much struck with the appropriate nature of the opening song, "Feather Your Nest," which was interpreted by Mr. Eckardt as "Buy Now." (Laughter). "Why was the O.R.L.D.A. organized?" inquired the speaker, and one diner humorously interjected, "So that we could pay the wholesaler." Mr. Eckardt said that in aims, ideals and aspirations the wholesalers and retail dealers' organizations were largely identical and the same unity of interest and welfare had brought them together. "The only difference," he naively added, "is that we have wood engraved on our banners and you have gold. You retailers have the gold and we have the wood."

Regarding the standard order form, which had been adopted by the retailers, the speaker said that regardless of anything contained in the form, "the only way a wholesaler wants to treat you is on your honor." He explained the purpose and object of the Wholesale Dealers' Association, which was not a price regulating body as prices were never mentioned or discussed in their meetings. But there were many matters in which the Wholesalers' Association was fighting in the interest of the retailers and among them was the campaign to secure reasonable rates on the railways. "The rates in effect to-day are partly the cause of stagnation and unemployment. Mr. Carvell, the chairman of the Railway Commission, had stated that he was going to see that the freight rates were high enough to protect the revenues of the transportation companies."

Mr. Eckardt added: "Are the railways being operated economically. We as lumbermen do not believe they are." He gave instances of where, before the rapid and excessive ascensions in carrying charges, men who were earning seventy-five dollars a month on branch lines, were now receiving from three hundred and fifty to four hundred dollars a month, and asserted that "the railways are not being operated in the interests of the citizens of Canada. We do not think the McAdoo award should be fastened on the people of the Dominion with its sparse population. There should be a showdown even if means it a strike. It would at least clear the air." The rates, which from Midland to Toronto had been on an average, $2 per M before the war, were now $5 to $6 on lumber.

When the receiver of lumber arranges with the owner of a private siding for the use of a siding, the railways have been making the same charge as though delivery was made on their team track. A decision was rendered some time ago by the Board of Railway Commissioners, fixing the charge under the general switching order, which was ½c per hundred lbs. The question was to determine the definition of "private siding" as compared with "public team track siding." Thus, it was finally settled by the order of the Board that the railways should not charge more for such private siding delivery than is outlined in the general siding order.

Another matter, which required attention, was the simplification of the tariffs and the adoption of one uniform standard tariff. Then there was the question of minimum weights, of which there prevailed twenty-six different minimums in Ontario and fourteen on shipments to the Coast and on export business. The lumber men wanted not only the minimum weights reduced but also the minimums.

Wood Operators Have Been Handicapped

Mr. Eckardt referred to the excellent articles which had appeared in the "Canada Lumberman" and other papers on the necessity of the farmer properly housing his agricultural implements, and said that, as a result of the pointers contained therein, many dealers had been enabled to increase their rural trade. Another important matter was to get the ear of the local editors of papers and point out to them that lumber prices had been reduced much more than those of other building commodities, and now was the time to start an active building campaign.

Regarding operating conditions in the woods and the cost of logging, Mr. Eckardt remarked that, owing to the absence of snow and cold weather hauling facilities had been unfavorable. Many teams had gone through the thin ice on open rivers. There was a danger, too, in view of the limited precipitation of snow that there would be driving difficulties in the spring owing to low water in the lakes and streams.

According to the returns of 1918—those of succeeding years not having been presented yet—there was a total lumber cut in the Dominion of Canada of about four billion feet, of which the heaviest cut was in spruce. Next came white pine, then fir, hemlock, cedar and balsam. The entire annual cut in the United States was forty billion feet, of which one-third was yellow pine. The speaker asked his hearers to contemplate what such a large harvest of timber meant. Reckoning 16,000 feet of lumber to a car, it would take 2,500,000 to transport this lumber, and if placed on cars, each forty feet long, the distance would be 19,000 miles. Reverting to decreased production during the present season, Mr. Eckardt said he estimated that in Northern Ontario the cut of white pine would be reduced by fifteen per cent. from last season; red pine, thirty per cent.; spruce, thirty-five per cent., and hemlock, twenty per cent.

Probable Prices for 1921 Forecasted

With respect to values, he believed that white pine would hold its own, and that practically the same prices would prevail as in 1920, with the exception of those on mill culls and dead culls, which might go very low. Red pine also would in all likelihood show a decline in values as well as spruce, of which there was a considerable quantity on the market, especially in the east. In hemlock, which was the principal lumber used for studding and other purposes in house construction, there had been a runaway market in 1920 and the price had dropped to-day about thirty per cent. He did not look for a change in quotations on hemlock of more than two or three dollars a thousand. In the west there had been a considerable reduction in the figure for logs, particularly in cedar and fir. On the former, prices, which had during the war ranged from $25 to $40, had now declined to $15 and $25. As to whether now was the time to buy B. C. cedar shingles, Mr. Eckardt said that he believed the price

was as near down to the actual cost of production as it could possibly be and buyers would have to use their own judgment.

In closing, the chairman of the Wholesale Lumber Dealers' Association touched upon the prospects of immigration. The many thousands coming to Canada would all have to be fed, clothed and housed. In years gone by, when new settlers were arriving at the average rate of one thousand a day, business had been active in every line and the outlook was promising for a recurrence of prosperity owing to the large influx of population. He favored a conference of other industries with that of lumber particularly in cement, brick and hardware, all of which should come down a great deal more in sympathy with forest products. Such a gathering would be good business in the interest of all and should result in building activity, for the country, from one end to the other, was much in need of houses and the demand should be met. There was no cause for alarm or dismay regarding the future if industrial interests would co-operate in bring prices down to a proper level and, with the unrivalled resources of Canada and the spirit and enterprise of its people, there was little to fear regarding the days to come. (Applause).

Owing to the absence of J. C. Scofield, of Windsor, when the toast of "The Retailers" was to be replied to, President Reid called upon F. B. Van Dusen, of Brockville, who was introduced as "one of the baby members of the association who had just been elected a director." Mr. Van Dusen suitably replied.

The Future Timber Supplies of Ontario

Hon. Beniah Bowman was well received. It was the first appearance of the Minister of Lands and Forests before the lumbermen of Ontario. He spoke of his pleasure in getting in touch with the retail lumbermen and added that the Crown was commencing to worry whether they would have either the wood or the gold which had been spoken of. He said that it was necessary for the province to do something effective and progressive in regard to the matter of future supplies if Ontario was to continue to be a timber producing province. There was need for much improvement in reforestation and fire prevention. Over ninety timber limits, small and large, had been sold since the present government had come into power. It had been stated that the administration should not dispose of any more holdings, but that policy would not hold good, for the reason, that much of the timber was now mature and should be cut to save it from deterioration. If not cut, there was also danger of it being destroyed by fire or insects. There was need, however, that cutting should be carried on economically and operations in the bush should be conducted a little more carefully in the future than in the past. Every kind of timber should be utilized and not merely the more profitable as had been the case in years gone by. In Ontario during the past there had been more timber destroyed by fire than had fallen a prey to the woodsman's axe and, with a view to the protection of the wooded wealth of the province, a proper fire ranging staff was being provided, with increased efficient equipment.

It was necessary that progressive methods should be adopted so that the new growth would come along satisfactorily and, to this end, brush burning and other experiments were being tried out. Mr. Bowman referred to the reforestation work now under way; setting aside certain areas for reforestation purposes on land which was not suitable for agriculture. A bill had just been introduced in the House with this end in view, and comprehensive plans for the extension of the nurseries of the department were under contemplation. In closing Mr. Bowman stated that he believed, with proper care, foresight and economy, Ontario could be made a perpetual timber producing province, and that the natural resources of the province could be turned into money without crippling any engaged in the great lumber business.

A. J. Young, of North Bay and Toronto, was introduced as "one of the gentlemen from the North who had so hospitably entertained the retailers on their trip to that section last summer." He spoke of the pleasure that the visit of the lumbermen had given to the people in that part of the province and, in referring to the sale of timber limits, declared that the changes, which had taken place in the method of their disposal, might well be worth reconsidering. The time given for cutting was too limited. There should be a greater sense of ownership of the timber on the part of the operator who would be more interested, if such were the case, in its protection and economical operation, which would be both beneficial to the province and to the operator.

W. J. Smith, of Toronto, another of the hosts of the lumbermen on their 1920 trip north, was cordially greeted. He spoke of the labor aspect and the need of greater efficiency on the part of certain trades. The reason that many industries were so slack to-day, was owing to the attitude of labor. There was need of greater production on the part of the workers and, in this respect, the speaker mentioned especially bricklayers and plumbers. Owing to the terrific cost, many persons with money, who contemplated building were holding off. One of the principal reasons was the inefficiency and exactions of labor regarding which Mr. Smith furnished a number of examples. "There are men in Toronto with the money to erect homes, but rather than undertake the task at the present time they would rather go on living with their mothers-in-law," added Mr. Smith, amid much merriment. If rents were further increased many, under the present circumstances, would prefer paying the advance sooner than build at this juncture.

A. C. Manbert, of Toronto, former chairman of the Wholesale Lumber Dealers' Association, also spoke briefly, indulging in a few pleasantries at the expense of the chairman, Mr. Reid, and thanking the gathering for the invitation to be present.

John Barry, of Toronto, heralded "as the only living man who ever caught a porcupine alive by the tail," added a few congratulatory words on the success of the banquet, which closed with a special toast to Horace Boultbee, the energetic secretary of the association.

Resolutions Adopted by Ontario Retail Lumbermen

Moved by E. M. Barrett, seconded by W. E. S. Savage, that the work done by the Legislative Committee in connection with the Mechanics' Lien Act be approved and that the same committee continue their efforts to have a new act passed.—Carried.

Moved by M. H. Armstrong, seconded by E. P. Mason, that the Legislation Committee be instructed to take whatever steps they consider necessary in order to oppose any proposed anti-shingle legislation.—Carried.

Moved by Jas. Harriman, seconded by Sherman Cooper, that inasmuch as the Dominion and Ontario Governments have given us no encouragement to expect that they will introduce legislation to make it compulsory for labor unions to become incorporated; be it, therefore, resolved that our secretary communicate with the other lumber associations in Canada, the Canadian Manufacturers' Association, Boards of Trade and Chambers of Commerce, and the National Association of Canadian Building Industries, and request them to co- operate with us in asking the Government for legislation for this purpose.—Carried.

Moved by R. E. Reid, seconded by Robt. Oliver, that this association commend the Government of Ontario for its efforts to preserve the forest wealth of the province and would recommend that all members of our association should join the Canadian Forestry Association.—Carried.

Moved by S. A. Lambert, seconded by Alex. Rhind, that the directors of this association be instructed to arrange for a midsummer outing for the present year.—Carried.

Moved by Jas. Harriman, seconded by E. C. Russell, that our association appreciates very highly the support of the wholesalers who advertise in the Monthly Bulletin and urges all members to give these advertisers a preference in their orders whenever possible.—Carried.

Moved by O. W. Rice, seconded by C. S. Anglin, that dealers in districts where no local organizations have as yet been formed be urged to recognize the importance of establishing such branches as soon as possible.—Carried.

Moved by James Harriman, seconded by E. C. Russell, that a resolution be sent to the Ontario Government opposing anything in the nature of increased compensation to workmen under the Workmen's Compensation Act and that the Government be asked to appoint upon the Board a representative from the employers, and that a copy of this resolution be sent to the Canadian Manufacturers' Association.—Carried.

Moved by E. M. Barrett, seconded by W. M. Tupling, that this association extend its very warm thanks to the retail lumber dealers of Toronto for their generous hospitality and entertainment of the visiting retailers.—Carried.

Moved by J. C. Scofield, seconded by E. M. Barrett, that the next annual meeting of the association be held at a date to be fixed by the incoming directors.—Carried.

Clarion Call to Leave Lumber on Free List

Leading American Lumberman Declares Tariff Would be Against Public Policy and Public Sentiment—Canada Would Certainly Retaliate

It is very evident, judging from the opposition being given by the lumber interests of the United States that the revision of the tariff in so far as it applies to Canada, is not in the least popular. It would appear that any increase in the tariff would react against the business of the United States in regard to its second best world's customer, Canada, and at the same time would create a spirit of retaliation fraught with serious consequence to the entire American business interests. A letter, which has been addressed to the chairman of the Congressional Ways and Means Committee, Washington, D.C., by A. L. Clarke, of the Clarke Lumber Company of Dallas, Texas, who is also president of the Vancouver Lumber Co., Vancouver, is expressive of the feeling of the lumber interests of the United States, and is, at the same time, interesting and illuminative of a situation that calls for serious study by the Canadian lumber interests as well as the Canadian Government. It goes far to explode the theory that the United States is absolutely dependent upon Canada for its wood supply, which is considered negligible in comparison with the total production and consumption of lumber in the United States. Where Canada exports to the United States in the way of commodities one dollar, Canada imports from that country two dollars, leaving the balance of 100 per cent. in trade in favor of the American people.

The following is part of Mr. Clarke's letter sent to the Fordney Committee in regard to the revision of the United States tariff, and its bearing upon the timber trade:

I beg leave to file this with your committee, assigning some reasons against a tariff on lumber and mill products.

First:—Such a tariff could only be considered as operating against Canada. The total imports and exports of lumber from and to that country, as furnished me by the Bureau of Foreign and Domestic Commerce, Washington, D.C., recently, follows:

	Lumber imported from Canada	Lumber exported to Canada
1918	1,183,079,000 feet	205,492,000 feet
1919	1,119,300,000 feet	199,356,000 feet
1920 (11 mos)	1,250,456,000 feet	146,380,000 feet
	3,552,835,000 feet	551,228,000 feet

This is such a negligible quantity, as compared to the total production and consumption of lumber in the U. S., it would seem almost in the nature of an affront to erect a tariff against that good customer and friend without provocation or necessity.

Second:—The value of importations to and from same years, were as follows:

	Exportations to Canada	Exportations from Canada
1918	$886,877,584.00	$451,695,009.00
1919	734,267,286.00	494,693,869.00
1920 (11 mos.)	910,122,277.00	552,244,139.00
	$2,531,267,147.00	$1,498,633,017.00

Thus it is seen that Canada buys from the U. S. substantially two dollar's worth of commodities for every one dollar's worth we buy from Canada, including all of the lumber and all of the wheat imported from there. If these two items were taken out, it would be hard to tell how Canada could pay the U. S. for her purchases in the U. S. For these reasons a tariff on lumber would be unwise and economically unsound.

Cost of Production Higher in Canada

Third:—The principal exportations of lumber into the U. S. from Canada, come from British Columbia. The cost of production in B. C. is very much greater than in Washington and Oregon, due to these facts:—

(a) Practically all mill supplies and machinery, including such items as sawmill machinery, planing mill machinery, locomotives, rails, chains, saws, belting, wire cables, log cars, and practically all supplies used in the construction of logging railroads and all operating plants are bought from the U. S. and on all of which there is a heavy duty. It is probably safe to state that these added costs will amount to $1.00 per thousand feet over the cost of Washington and Oregon mills for the same supplies. Besides it should be remembered that this business is obtained by the American manufacturers of these supplies.

(b) The physical difference in the coast line from Vancouver to Prince Rupert (which covers the commercially timbered area) and that of the States of Washington and Oregon, are very great. Rail connection with the coast line is absolutely necessary for the successful operation of manufacturing plants. Practically all the operating plants of British Columbia are located and have connection with the rail lines at and around Vancouver and on and near the mouth of the Fraser River, and those points on Vancouver Island having rail connection with the tide water by car barges to the mainland. The logging of these mills is carried on up to this lone coast line by means of tow boats to Vancouver, made necessary because the rail connections are practically in and around Vancouver only, as stated.

Against Public Policy and Sentiment

Fourth:—A tariff on lumber would be against public policy and public sentiment. It would be in direct opposition to all of the theories of conservation now being so actively advanced throughout the country.

If there is any basis for the general belief and sentiment that conservation is a matter that we are now concerned over then, how could a tariff wall be justified against the relief from continued and more rapid depletion of our own forests through these importations from Canada. Surely these two propositions of conservation and tariff on lumber importations, cannot go hand and hand in harmony. The one who would advocate at this time the stoppage, by tariff, of this relief from another source, is the one who would be advocating that our forests be further and more rapidly depleted, and he would be consistent in rejecting, through a tariff, all protection that would come from any other source. The same man, to be consistent, should stand out against all efforts and arguments for conservation and reforestation.

If there is any basis for the complaint of high prices on lumber, then I cannot reconcile that complaint with a tariff against lumber importations from some other source. It would follow that to erect a tariff, under these circumstances, would be to admit that the great consuming public had been lost sight of and was not to be considered in the matter.

I cannot conceive of the millions of people in this country in need of homes being willing to be penalized by a tariff to protect the very people of whom they now complain, if it is brought out in broad daylight and shown what was being done to them by such a course.

Fifth:—It has already been pointed out that the total volume of commodities sold by the United States to Canada is practically double what the United States buys from Canada. Therefore to erect a tariff wall against Canada on one of the principal commodities of her exports to us, would be to put a knife into her industrial heart, and the unprovoked wound would undoubtedly arouse her and lead her to retaliatory tariff legislation. Where would we get off at in that case? She would immediately legislate against us on many times the value of our exports to her over these comparatively small imports of Canadian lumber over here. At the present time Canada appears to be satisfied with conditions as they are. With the balance of the trade so greatly in favor of the United States, why "rock the boat," and start something that could only result disastrously to the United States?

No Menace to the American Market

Sixth:—I wish to further point out to your committee that even though the lumber industry in British Columbia should expand or grow, it will probably not grow relatively as fast as the industry in the United States declines and that the United States would be the final beneficiary of this source of timber supply in direct protection of her own. In any event, it will always be a small factor in the total consumption of the United States; it will not at any time menace American market condition, as a natural tariff is now imposed and always will be on account of the inevitable higher manufacturing cost in British Columbia over that in the United States.

From these facts it appears to me that it must be conceded that a tariff on lumber for protection is unthinkable. Who is it that needs to be protected? Who is it that the farmers from Canada to the Gulf of Mexico, from the Atlantic to the Pacific in the rural districts, and the home owners in the United States are interested in protecting to the extent of penalizing themselves for that protection? Isolate him and point him out and the farmers of this country and the home

builders and the farm builders and the railroad builders and the wage earners trying to build homes on the installment plan will crucify him and them and all those who take a hand in trying to fasten upon them this additional unjust and unjustifiable burden for the benefit of the fattening few who need it not.

If a tariff is proposed for revenue, the total amount of lumber imported, as shown by the figures of the past three years as an example, will produce less than $2,000,000.00 per annum. That could hardly be located and it would not last as long with the official spenders in Washington, after it was located, as it took to locate it.

Could any man with the slightest vision doubt that if we were to ask a tariff against Canada on lumber that she would retaliate against the hundreds of millions of dollars' worth of goods purchased in the United States.

Would Call Forth Some Reprisals

There probably never was a time when the nations of the earth were so jealous of the trade opportunities left to them as they are now, and accordingly they are more disposed to resent having any limitations placed on those opportunities. Only recently, France, which of all the nations, probably has the best excuse for resorting to tariff duties to foster its industries, made a slight readjustment of its schedules that worked injuriously to certain industries in Spain. The result was that Spain immediately retaliated with a manipulation of its own tariff, designed to work unjustly to certain industries in France. It is safe to estimate that no nation may make any considerable revision of its tariff schedules for the purpose of excluding importations without calling down upon itself some reprisal. Already Canada has made it plain that it will erect barriers against our manufacturers, equal to any that we may raise against them.

We are the richest nation in the world. We are highly trained in efficient and in specialized quantity manufacture. We are more than capable of competing with any nation in the world, or all of them combined. We want the trade of the world. We are capable of going and getting it, and we are capable of handling it when we do get it. The rest of the world is indebted to us. We want them to pay. How can they pay if we erect tariff barriers against them? We want to sell them our goods and our manufacturers. How can they buy them if we erect tariff walls against them, so that they cannot sell to us?

Halt Must be Called in Export of Pulpwood

Standing Supply Suffers Lamentable Loss Through Ravages of Bud-worm—Ample Protection Essential to Numerous Mills Operating in Canada

By Frank J. D. Barnjum, Annapolis Royal, N. S.

I do not wish to create a panic in timber or paper, but the condition of our standing wood supply has now become so alarming that it is time something should be done to awaken the public interest in this vitally important matter and that the people should be apprised as to the tremendous loss that has been suffered through the ravages of the bud-worm in our standing wood supply, which now amounts to a national calamity.

This scourge has swept across the entire province of Quebec, covering an area of more than seventy-five million acres from the Saguenay River as far west as the province of Ontario, as far north as the height of land, and as far south as the boundary line of the United States, taking in the entire province of New Brunswick, causing a loss of approximately one-half its visible supply and has now begun its infestation of Ontario.

In this vast area there are but few sections that have not been visited by this pest. In some spots the loss has been less than others, and it varies all the way from 15 to 100 per cent. Some authorities have said that the fir or balsam growth has not been entirely killed and a portion may recover, but if they will examine these trees closely they will find that immediately on the departure of the bud-worm this growth has been attacked while in its weakened condition by either the bark beetle, bark weevil, ground rot, heart rot, or sap rot. These pests are at work completing the job begun by the bud-worm, so that it is perfectly safe to say that all the fir or balsam growth is doomed in the above area.

The result of the terrific invasion is appaling for the amount of loss to our timber supply staggers the imagination. Thus far no one has cared to paint the picture as it really is.

The amount of fir or balsam in the above territories south of the height of land in Quebec has always been estimated as running from fifty to sixty per cent. in its ratio to spruce. So, calling the stand only fifty per cent. balsam, it means a loss of at least one-half of our estimated stand of available pulpwood in the province of Quebec, or seventy-five million cords, as Quebec's available supply was estimated at one hundred and fifty million cords.

One may figure it in another way by simply calling it a loss of merely one cord per acre on the seventy-five million acres (a figure which no one will attempt to dispute) and you still have the same result, viz., a loss of seventy-five million cords. This means, at the present rate of consumption of all wood products, that about twenty years' supply for the province of Quebec has been wiped out from one cause only.

What small, scrubby, black spruce growth there is left north of the height of land seems to have been avoided by the bud-worm as too tough a morsel for even a parasite.

The Terrible Ravages of Fire

Now, passing to a consideration of the arch enemy of the forests, fire, the most recent estimate I have seen from loss by fire along merely one line of our railways, between LaTuque and Cochrane on the Transcontinental, amounts to twenty million cords, sufficient wood to have kept the paper mills of Quebec running for ten years.

There is one compensation, poor as it may seem, with relation to our future wood supply, and that is that the money value of what land and wood we still have left has more than doubled on account of the short supply remaining, and this fact we must not forget in considering present prices for pulp, paper, lumber and wood.

The newspapers are asking for lower prices for paper, while as a matter of fact the manufacturer of paper and lumber is faced with increasing costs in connection with the protection of his forests from fire and bugs, and the only way this can be met is with higher prices. The bud-worm has destroyed such tremendous areas of standing fir and spruce that the fire hazard has been increased a hundred-fold owing to the very large areas of dry dead trees in the woods, entailing a greatly increased fire patrol.

Higher prices for land, pulpwood, lumber, and paper is the only practical conservation that I can see, as it will have the effect of preventing waste in these commodities and will enable the land owner to set aside something to spend for increased fire protection, burning of slash, selective cutting, and reforestation.

The time is now here when a careful burning of slash and debris must be practised as a measure of protection against insect pests and also as a fire preventive measure.

When timberlands in the east attain a value of $50 per acre, which is less than one-half of what it will cost to reproduce, then and only then will there probably be some check in the enormous waste that is going on in the woods in connection with logging operations.

When paper, which has the distinction of being manufactured from the most rapidly disappearing raw material of any of our manufactured products, attains a price commensurate with its real value, which before this product was manufactured out of wood was about twenty cents per pound, then and probably not till then will the present enormous waste in paper be curtailed.

It matters not to the publishers what the price of paper is, so long as they all pay practically the same, as the cost will simply be passed along to the consumer in any event. The interests of the newspaper publishers and the newsprint manufacturers are one, as they are both dependent on the conservation of our forests.

If this partial picture of destruction is not sufficient to cause our Government to put a heavy export tax or embargo on our fee land wood, then the complete story will have to be told.

Can Get Prices Right at Home

In the past the only argument against this procedure has been that it would be a hardship to the farmer or fee land owner, as it would prevent him from obtaining the best price for his wood; but this does not apply now, for with Canada's more than one hundred pulp and paper mills, and more building, the home market with its shorter rail haul makes the more desirable market, both for the wood as well as for farm produce. With the enormous loss of wood that our mills have suffered we can now afford to pay just as much for wood as the mills of the United States. As a matter of fact, wood is selling in Quebec as high as it is in Maine. The home market for our farm produce has now also become more important than ever, on

account of the customs duties which the United States is piling up against us.

Every mill erected in Canada means another town and just so much more demand for the product of the farm as well as more freight for our railroads, as every car of wood hauled to a paper mill means four additional cars of other material and supplies, which would increase the income of our railroads enormously. It would mean the haulage of five hundred thousand additional carloads of freight if the million and a quarter cords of fee land wood now exported to the States were manufactured in Canada.

In addition to all of the above facts, the item of the difference in exchange is a very important one. When we ship out a cord of wood, there is only a matter of twenty-five dollars left in Canada, while if this cord of wood is manufactured into paper it would leave with us nearly three times as much, or seventy-five dollars. In other words, the million and a quarter cords of wood we shipped out last year left in this country only a matter of thirty-two million dollars, and I am afraid much less. If manufactured into paper this would have enriched Canada to the extent of approximately one hundred million dollars. This means that we have suffered a direct loss of more than seventy million dollars, while the indirect loss has probably been much more. This would reduce our trade balance to a very material extent.

Possibly even more important still, especially in times of unemployment like the present, the additional annual employment of the ten thousand men necessary to turn this million and a quarter cords of wood into paper would mean a city of fifty thousand people, or twenty-five new towns of two thousand population each; although, with the enormous expansion we have had and are now having in the pulp and paper industry, we have but a very short supply for many of our present mills and Canada is already over-developed in so far as pulp and paper are concerned. At least some measure of protection must be afforded to mills already built.

No country, no matter how friendly its relations may be, will consent to the closing of one of its own most important industries for the sake of supplying raw material to the mills of another country.

I wish to quote from a very significant and timely article written by Hon. Gifford Pinchot, former Chief Forester of the United States, on "The Economic Significance of Forestry," in which he says in part:—

> "Can we look to the rest of the world for material help when American forests fail? To our very serious danger, we can not.
>
> "The destruction of our timber, and of the timber producing power of lands valuable for no other purpose, would be far less serious than it is if there were other portions of the world from which the absolutely essential lumber supply for our agriculture and industries could be obtained. From the point of view of the gigantic needs of the United States, Canada has no great supply of lumber, and has already made its plan beyond peradventure that she purposes to keep what she has for her own development."

This time has now arrived. With the tremendous loss in our available wood supply it is now no longer a question for international negotiations but it is simply a question of life or death for our pulp and paper industry.

What Well Equipped Factory Means to Lumber Yard

By W. Warren, Toronto

In several letters and articles that appeared in the "Canada Lumberman" some time ago, relative to the operating of planing mills and woodworking factories in conjunction with lumber yards, I was much interested in learning the various view points. I have only handled city business, so cannot talk intelligently regarding country yards, but having had considerable experience in the manipulation of yards and factories within the city, I have much pleasure in giving you my opinion based on my experience during the past 15 years.

Are planing mills and factories necessary for the successful and profitable operating of a yard? My answer is while a factory is not absolutely necessary, it is, however, very desirable. A yard cannot be successfully and efficiently operated without the assistance of a mill. We can, of course, bring in some materials ready for the market, even those of us with up-to-date mills do so, but we cannot begin to foresee all the requirements of an exacting public.

A yard operating without a mill reduces its business to a purely stock proposition, and seeing that the most of our city trade is of a detail character and calls for something just a little different to what the farseeing lumberman can forsee, it is quite obvious that any yard trying to operate without a mill is hopelessly out of the running.

Then there is another side that must not be overlooked. There is in every yard an accumulation of slow moving stock. My experience is that this material in most cases has to be manufactured into something else before it can be disposed of; otherwise it remains in the yard indefinitely and ultimately deteriorates until it reaches the no value mark.

A lumber yard without a factory is a totally different thing. A factory is not essential to the profitable manipulation of the yard. It may be well if I state just what I mean by the term "factory." It is somewhat vague. I mean a plant equipped to handle sash and doors, interior trim, and any and every class of woodwork required, from a 4-roomed cottage up to the elaborate fittings for an up-to-date city bank.

Woodworking factories are not generally looked upon as profitable. The executive must possess greater experience and technical knowledge than is generally to be found amongst yard executives. It is, moreover, a business that must be run to a large extent separately from the yard and mill and can only be successfully operated when handled by experts. However, it will be a great acquisition to a yard when operated along progressive lines. It will use up much material that cannot otherwise be disposed of, and be in a position to supply all a customer's requirements in the lumber line. Certainly it is a wonderful help to the yard, and brings with it business that without the factory would go into another channel.

It must not, however, be forgotten that the installations and equipment of a factory are somewhat expensive and call for a fairly capable organization.

My contention, therefore, is that a factory well equipped and scientifically managed is a desirable adjunct to the yard. Anything short of this will be a bill of expense and a source of anxiety and worry to the unfortunate owner.

Historic Eastern Firm is Re-organized

The reorganization of the Quebec lumber and timber firm of W. & J. Sharples, Limited, was perfected recently, under the new act of incorporation. At a meeting of the Board of Directors, W. Gerard Power was elected president; John G. Levie, vice-president; Frank Power, treasurer, and Chas. E. Murphy, secretary.

Mr. W. Gerard Power, the new head of the company, is a son of the late Wm. Power, the veteran pioneer lumberman, who passed away a few weeks ago. He is a former president of the Canadian Lumbermen's Association, and president and general manager of the River Ouelle Pulp & Lumber Co. of St. Pacome, who are widely known in the trade as manufacturers and dealers in high-grade spruce. Mr. Power is also president of the Quebec Limit Holders' Association; of the Peninsula Lumber Co., Limited, and has held other important offices in lumber, forestry and woodland organizations.

The lumber business of Messrs. Sharples was established in Quebec, in 1818, for the purpose of carrying on the exportation of Canadian lumber and timber to the Mother Country, and was continued under various names, different members of the Sharples family succeeding one another, until 1904 when it became W. & J. Sharples, the firm being composed of the late Hon. John Sharples, the late R. Harcourt Smith, and the late Wm. Power. In 1914 the style was changed to W. & J. Sharples, Registered. The two other partners having died, the late Wm. Power carried on the business alone.

It is now a joint-stock company under the name of W. & J. Sharples, Limited, and the company, for which letters patent had been obtained prior to the death of Wm. Power, is now being administered by members of his family and some of the old employees. A large amount of new capital is being subscribed and the company is in a position to carry on as extensively as in the past. It has retained its European and other connections, which have hitherto proved of great assistance in its dealing overseas. The organization has been entrusted by the shareholders to W. G. Power and John J. Levie. The latter has been for years office manager of the old firm of W. & J. Sharples, Registered, and has an extensive and valuable connection both in Canada and the United States.

A. T. Robson, who for a long time has been manager of the Associated Mills, Vancouver, has resigned to take over the sales management of the Timberland Lumber Co., New Westminster, of which his brother, J. G. Robson, is president. A. K. Bannerman has succeeded Mr. Robson as sales manager of the Associated Mills, having been in the service of the company for some time.

Material, Waste, Direct Labor and Overhead

These Factors Entering into Cost of Millwork Demonstrate Importance and Urgency of Efficient Cost Accounting System in Every Plant

By George H. Most, Chicago, Ill.*

The demand for Cost Accountancy and Cost Keeping during recent years may truly be characterized as phenomenal. Executives in all industries are rapidly realizing that in these days of tremendous volume, rapid turnover and small margins, the profit and loss sheet fails to provide a satisfactory industrial barometer.

Modern business, of necessity, cannot tolerate unproductive or unprofitable departments or units, and accounting machinery, that will reflect not only the loss, but also indicate why and where it occurred, is indispensable. In the millwork industry many instances have been brought to light through Cost Accounting and Cost Keeping, where the lumber yard was returning a very satisfactory margin, while the mill had been operating during its entire existence at a dead loss. We have also found that many mills failed to return properly to the investors, because the profits realized in the machining department were totally nullified by the results obtaining in the bench or cabinet and stair department.

The elimination of loss is a rather perplexing problem for the millman. Unfortunately, in the past, too many millwork producers were deluded by two common fallacies, viz., (1) that they could always afford to take the bill at "The other fellow's price," and (2) that the estimate price was of rather secondary importance, because the deficiencies of the estimating department could be largely overcome by increased efficiency in the production department.

The first condition results almost directly from a realization on the part of the millman, that he does not know the cost of his goods and feels, possibly, rather than lose the sale he can afford to take a chance that his competitor has intelligently compiled his quotation. In the past, with the majority of millmen suffering from a lack of cost knowledge, the accepting of a bill at the competitor's price simply meant the absorption of his short comings, and in many cases an accompanying loss.

The second instance outlined above is a fallacy indeed, for if sufficient of your product is sold at less than cost of production, ultimate failure is in store, regardless of the efficiency of your factory or increased production. It is obvious, therefore, that the crux of the entire situation is cost; that is, knowing your cost so that your estimates may be based on actual cost, instead of on theory and guesswork. The sale price of millwork is merely a combination of the factors of cost and profit. If the cost is not intelligently arrived at, the average sale price will no doubt prove very unsatisfactory.

The Four Factors in Millwork Cost

Four factors enter into the cost of millwork, viz., Material, Waste, Direct Labor and Overhead or Burden. Outside of the fact that a few mills still fail to realize that waste in cutting lumber ranges from 10 per cent. on yellow pine to 40 per cent. on white oak, almost every one is quite familiar with cost, with the exception of the item of overhead or burden. This is by far the most elusive factor of cost, as both the compilation and application must be scientifically performed. In many industries this extremely vital problem must be met and disposed of by the individual operators. For many years, the sash and door and millwork producers were similarly situated. To-day, however, the subject of millwork cost is handled collectively through the institution which I represent—the Millwork Cost Information Bureau of Chicago.

Our association is the recognized authority on cost and estimating procedure in the millwork industry, and in addition to supplying our membership with estimating cost schedules based on actual cost experiences of our members, we have combined the meritorious features of all the cost systems existing in the past in member-factories, and have evolved the "Standard Cost Finding System."

Under this system, the usual burdensome task of analysis, incident to the termination of a period, is eliminated by the arrangement of the ledger accounts, so that all expenses are properly classified, and the burdens are in reality compiled by a daily analysis, effected by postings to the proper sub-divided expense accounts. At the end of the period, the various expense totals are distributed against the proper burdens, so that a lumber burden per 100 feet is determined, also an hour burden for machines and for benches and a percentage of production cost for commercial burden. On account of the fact that both expensive and cheap material are to be considered, and that the nature of machine and bench work is diametrically opposite, it has been found advisable to divide the total overhead or burden into four parts, and also to apply each as a "unit of measure" wherever possible, instead of on the percentage basis.

The foundation of each of the four burdens is the group of fixed expenses, including taxes, insurance, depreciation and interest on investment. These are pro-rated against the proper values in the various departments. The rates of depreciation used for machinery, buildings, autos, tools, etc., are those universally accepted by the best accounting practice.

Interest on investment is included as an item of cost in burden compilation, but is not carried into the bookkeeping as a regular item of expense, as a false profit would thus be created, which would prove to be misleading.

In addition to the fixed charges, the lumber burden consists of handling expense, composed primarily of yard rent, repairs, labor, team and hauling labor and lumber purchasing expense. The kiln burden would be established in a similar manner, adding, of course, a portion of power for heat.

What Lumber Burden Consists Of

Before it is possible to compile the machine and bench burdens, it is necessary to arrive at a general factory overhead rate per hour. This overhead is merely used temporarily by the auditor in the compilation of machine and bench burdens, and consists of all items of expense not chargeable directly to either machines or benches, such as fixed charges applying to mill land, buildings and stock, also wages of foremen, watchmen, truckers, sweepers, superintendent, and expense of stationery, time cards, water and light bills, etc. These expenses are totalled and charged against the machines and benches on the basis of direct hours worked in these departments. To this rate per hour is added an hourly rate, which will cover distinctly machine expenses. The total will equal the machine burden per hour.

The machine expenses referred to above would include—besides machine fixed expenses—a portion of power, machine repairs, supplies, knives, oil, grease, etc. The bench burden is compiled just as is the machine burden; that is, the hourly rate covering bench expense is combined with the general factory overhead.

The commercial burden consists of all expense items exclusive of production costs, viz., warehousing, packing, delivery, office and selling. The expense items consist of fixed charges applying to warehouse and office property, also labor, supplies, salaries, and items such as postage, telegraph, advertising, bad debts, etc.

For the average odd millwork factory, we recommend only the burdens enumerated above, but if conditions necessitate, other burdens may be developed to apply to each individual machine, or to departments considered as a unit. The question is often asked, why it is not possible to apply burden in one operation, which will cover all expenses in the various departments. This procedure has been found to be very inaccurate and unsatisfactory; in fact, it constitutes a perilous procedure where the type of product and value of material are subject to wide variation. In reality, any system of burden application which fails to provide for an equitable distribution of overhead when products of a diversified nature are involved, defeats the real purpose of a cost system. It is necessary, therefore, to sub-divide the total of overhead expense into a sufficient number of parts so that only a combination of such parts may be applied as is in reality required for the item under consideration.

For instance, a burden of $50.00 per M on all material used would not be equitable for both machine and bench work, because, while machine work, such as moulding, involves much material as compared to labor, the bench work or cupboards and stairs involves just the opposite proportion; that is, a very small amount of material as compared to the labor is required. It is also obvious that the material required for an item bears only the slightest relation to the burden factor, so in general, this plan is hardly feasible.

Another conspicuous example of improper burden application is

*Address delivered at recent Annual Meeting of Michigan Retail Lumber Dealers' Association at Grand Valley.

to consider all overhead as being equal to 50 per cent. of the material involved. In the event that a quantity of moulding manufactured of yellow pine were to be changed to mahogany, the burden would increase in the ratio about 1 to 3, according to the exact value of the material, whereas the running of mahogany moulding would in reality occasion but very little extra expense.

A number of other methods of burden application involving but one operation could also be cited, which are open to serious objections just as are those previously mentioned. It is obvious, therefore, that not only the compilation, but the application of overhead is of very serious import.

Before concluding, it may be well to dwell briefly on the necessity of cost work in general. In our industry, which, admittedly, is forced to contend with an extremely diversified and complicated manufactured product, we are peculiarly situated, in that we are required to quote on the larger portion of our output, sometimes months in advance of its manufacture. To complete a price on a complicated cupboard, stair or piece of panelwork, that will be sufficiently low to secure the order and amply high to cover cost plus profit, is indeed a science. A thorough knowledge of construction and material is required, together with a well defined idea as to the probable amount of labor and overhead that will be consumed. Overhead has proved to be just about as large a factor of cost as direct labor. This being true, is it not a fact that burden should constitute a subject for discussion among executives equally as much as your wage scales and rates?

It has been proved in the past, that, primarily, through the lack of knowledge pertaining to material wastes and burdens, estimates on odd millwork have varied consistently between 20 per cent. and 300 per cent. A large portion of the production of the industry was annually sold at considerably less than cost, with the natural result that an extremely large number of mills have found their investment to be in reality inferior to an investment in a first-class mortgage. The fact that at present over 450 mills of various sizes, involving the major portion of the industry, are associated in the interest of cost research and cost accounting should furnish convincing proof as to importance of cost in this industry.

Value of Uniform Cost Finding Method

It is difficult to conceive of an enterprise so simple as cannot be greatly benefited by knowing their cost. To proceed without a knowledge of your cost is very similar to an attempt to erect a large building with an imaginary or unstable foundation. Our observations have proved that uniform cost-finding methods are in many ways a distinct advantage to an industry. Each firm can then talk in a common language and the efforts of all can be centralized. Possibly the most advantageous method of effecting uniform cost-finding methods is through a central association or through several local associations operating through a main or central office.

I trust that those who have in the past disregarded their costs will give this important matter due consideration, and I know that once you have realized the tremendous advantages accruing from cost research, you will forever afterward be an ardent advocate of every one knowing their cost.

Late Jottings of General Interest

Gull River Lumber Co., Lindsay, have been granted supplementary letters patent to increase the capital stock from $100,000 to $300.000.

E. C. Plant, of the E. C. Plant Lumber Company, Montreal, is on a visit to Atlantic City, convalescing after illness. Mr. Plant underwent an operation in Ottawa.

The Maritime Lumber Company's rotary mill at Rocky Green, 20 miles from Campbellton, N.B., was destroyed by fire recently with a loss of about $30,000, partly covered by insurance.

W. E. Harris Mfg. Co., Limited, Toronto, have been incorporated with a capital of $25,000, to conduct the business of lumbermen, sawmillers, planing mill operators, and to manufacture, sell and deal in lumber and timber of all kinds.

Keenan Bros. Limited, Owen Sound, Ont., have been granted a provincial charter with a capital stock of $500,000, to carry on the business of lumbering and the lumber trade in all its branches, and to acquire the assets and goodwill of Keenan Bros., Limited, Owen Sound.

The Pembroke Lumber Co., a corporation created under the laws of the Dominion, have taken out an extra provincial license to do business in Ontario, and to expend a sum not larger than $2,000,000 in such operations. E. A. Dunlop, ex-M.P.P., of Pembroke, has been named by the company as its attorney.

Reid & Co. Lumber, Limited, is another organization which has recently been incorporated to take over the business carried on in Toronto under the name of Reid & Co. The capital stock of the new concern is $200,000, and the head office at Toronto. Among the incorporators are John B. Reid, George T. Reid and John B. Filsinger and others.

The Lynch Timber Co., a corporation created under the laws of Michigan, has been granted an extra provincial license to carry on business in Ontario in buying and selling timber, timber lands and forest products, and to invest the sum of $25,000. in such operations. P. T. Rowland of Sault Ste. Marie, Ont., has been appointed attorney of the company.

A provincial charter has been granted to the Canadian Pulp Machinery & Engineering Co. with headquarters in Toronto and a capital stock of $200,000. The company is empowered to buy, sell and deal in patents covering or affecting the machinery or any improvements thereof, used in the pulp industry, and to make and deal in machinery and apparatus used for manufacturing pulp.

There has been introduced in the Ontario Legislature by H. H. Dewart, acting on behalf of W. E. N. Sinclair of Oshawa, a new Mechanics' Lien Bill, patterned after the Ohio act and holding the owner of the building responsible for all claims against it. He must take an affidavit at stated periods from the contractor regarding the amounts owed by him, and make payments accordingly, and then if there is anything left, the contractor receives the residue. Under the present act, only 15% of the amount of the value of the building is retained and everything else handed over to the contractor so that in many instances, the retail lumberman and other supply firms have little or no protection.

W. Gerard Power, Quebec
Newly elected President of W. & J. Sharples, Ltd.

John Levie, Quebec
Newly elected Vice-Pres. of W. & J. Sharples, Ltd.

S. P. W. Cooke, Montreal
Newly appointed representative of Mason, Gordon & Co.

Are Railways Killing Lumber Business?

Many misconceptions exist regarding the price of lumber, the expense of manufacture, the difficulties of distribution, the amount that the millman gets for his product and the cost of carrying, particularly when the freight rates are so excessively high. In the east, when speaking of B. C. boards, shiplap, trim and other lines selling at $45.00 to $60.00 delivered, one not in close touch with the situation, might be led to the belief that the bulk of this price goes to the lumberman, or in other words, that the manufacturer and the wholesaler reap the long end. It is not unusual for coast mills to get only from $10.00, to $15.00 per M. on low grade fir, although a carload delivered in the east represents, when placed in the yard, an outlay of from $800.000 to $1,000.00—or from $40.00 per M up.

An illuminating example of how little the mill gets and how much the railway receives was afforded recently in the case of a car of No. 1 B. C. fir, dressed to Ontario standards 2x6, 2x8, 2x10, 10 to 20 ft., assorted lengths, which was delivered lately at York, the first station East of Toronto. The delivered price was very low on account of the car being one in transit, (without a home), the figure being $41.00 per M. The car was sent from Vancouver to Toronto and the railways refused to forward it on to York without the local freight rate applying. This added another $30.00 to the carriage bill, and along with some $12.00 demurrage, the amount of freight paid to the Grand Trunk Railway for the haulage of this car of fir, which contained 28,879 ft., was $959.13. The mill, which manufactured the material and sent it enroute to the East, got exactly $238.45, or less than $10.00 per M.

High Freights Cause Shipping Slump

It has been stated that 60 per cent. of the shipments in loaded cars from British Columbia to the east has in the past been of lumber or lumber products, but since the rapid ascension in freight rates whereby the through charge from Vancouver to Toronto is now $1.03.5 per hundred pounds as against 78c before the advance of last September, the slump has been awful.

It has been estimated that, before carriage charges grew so abnormal, the eastern provinces imported from British Columbia 250,000,000 feet each year for the past two or three years, or, in round number 10,000 cars were used annually to transport wood goods from the Pacific Coast to Ontario, Quebec and the Maritime Provinces. The freight on each car under the old rate would average about $400.00 or a total annual revenue to the railways of $4,000,000.00.

The plea was strongly urged, in connection with the recent ascension in freight rates, that the roads must have more money in order to pay operating expenses and meet the demands of their employees for higher wages. The only way that seemed open was, of course, to jump the rate on all commodities, and lumber suffered along with the rest. The result was that on each car brought east the railways received from $125.00 to $150.00 more per car for carrying charges, while the consumer had to pay from $5.00 to $7.00 more per M for his lumber. This raise came, at a time when business was none too good, and resulted in changing the whole market situation in a way that was never looked for.

Railways Find Increase a Boomerang

Canadian roads, on the augmented charges, have been losing money, for not one-third of the lumber has been coming out of British Columbia since the big increase in carrying costs went into effect, a few months ago. Instead, southern pine has re-invaded the Ontario market particularly and become a strong competitor against B.C. fir and Ontario hemlock. The average carrying rate on southern pine is only 53c per hundred pounds, as against $1.03.5 on stuff shipped from the Coast, making a difference of $13.00 to $14.00 per M in favor of southern pine, which has been disposed of in increased quantities at $34.00 and $36.00 delivered. These figures represent Canadian funds, not American.

Southern Pine, 80% No. 1 Common, 20% No. 2, in sizes 2x4, 2x6, 2x8, 2x10, 2x12, etc., and in lengths from 10 to 16 feet has been demoralizing the Ontario market so far as eastern hemlock and Douglas fir are concerned. Eastern representatives of B. C. mills have been facing stiff competition for several weeks now. The recent reduction of 5% in freight rates really amounted to nothing, so far as the through rate is concerned; in fact less than 50c per M on B. C. products.

Salesmen for Coast stock are encountering heavy odds at present by reason of the invasion of southern pine, which answers practically all the requirements and is used for just as many purposes as B. C. fir, while the excessive freight rates have piled up charges in the distribution of lumber so that the roads get practically three-quarters of what is received for the contents of a car, and the millman the balance.

If the exorbitant freight charges of the last few months were intended to stimulate business and add to the revenues of the railways, the move is proving a boomerang so far as the hauling of B. C. forest products to the east is concerned. To the onlooker it appears as if the roads have been killing the goose that laid the golden egg.

Personal Paragraphs of Interest

C. O. Maus, of the Hyde Lumber Co., South Bend, Ind., was a recent caller on the trade in Toronto.

R. B. Elgie of the Elgie and Jarvis Lumber Co., Toronto, and wife, left recently on an extended trip to the Pacific Coast.

J. I. Bennett, of the Bennett Lumber Company, Limited, exporters, Montreal, is on a business trip to England.

E. F. G. Sinton, of Grosart & Sinton, lumber exporters, Montreal, has just returned from a trip to the Old Country.

R. A. Laidlaw, of the Laidlaw Lumber Co., Toronto, has been appointed one of the two new trustees who were recently added to the board of directors of the Hospital for Sick Children.

E. H. Lemay, wholesale lumber dealer, Montreal, has been under treatment in the Royal Victoria Hospital. He is now on the way to recovery.

R. P. Shannon, of the R. P. Shannon Lumber Co., Vancouver, spent a few days in the east recently, calling upon the trade in Montreal, Ottawa and Toronto.

W. E. Schuster and W. N. Belair, of the Schuster Co., Limited, Belleville, left recently for England on a business trip. They will look into the export situation.

John B. Reid, of Toronto, honorary president of the Ontario Retail Lumber Dealers' Association, and Mrs. Reid are spending a couple of months at Atlantic City.

The Irvin Lumber Co. Limited, 26 Vine St., Toronto, have purchased the lumber yard and plant of Major J. E. L. Streight, Islington, Ont., and take possession this month. Major Streight is retiring.

J. R. Chabot, St. Justine, Que., is one of the latest Canadian firms to join the National Hardwood Lumber Dealers' Association, the 24th annual convention of which will be held in Philadelphia, June 9th and 10th.

John C. Artz, of Rochester, N.Y., representing the Lumber Mutual Fire Insurance Co. of Boston, Mass., was among those who attended the recent convention of the Ontario Retail Lumber Dealers' Association.

W. A. Hadley, of Chatham, and Mrs. Hadley, of Chatham, Ont., are spending a few weeks in Southern France. Mr. Hadley is a former president of the South Western Ontario Retail Lumber Dealers' Association.

Mrs. Sills, wife of George P. Sills, proprietor of the Premier Lumber Co., died recently in Vancouver. She is survived by her husband and two sons, P. G. Sills, manager of the Premier Lumber Co., and A. W. Sills, of Mount Vernon.

J. F. Lillicrap, of the Kawatha Lumber Co., has been elected president of the Board of Trade, Lakefield, Ont., for the coming year. Mr. Lillicrap is a veteran resident of Lakefield and has always taken a most active interest in its development.

Alexander MacLaren, of Buckingham, Que., a well known lumber and pulp manufacturer, who is also interested in timber in British Columbia, is on a visit to the Pacific Coast. He says that in the process of readjustment the lumber industry would be the first to regain its feet.

The firm name of Chappell Bros. & Co., lumber retailers, Sydney, N.S., has been changed to Chappell's, Limited. R. R. Chappell, who has been manager for over 20 years, has retired from active work and is succeeded by his assistant, M. R. Chappell. R. R. Chappell remains as president.

Fred A. Lehr, treasurer of the Goodyear Lumber Co., the Great Southern Lumber Co., the New Orleans Great Northern Railroad Co., and the Norwich Lumber Co., died recently in Buffalo. Mr. Lehr was well known and highly regarded in the trade and his passing has removed one of the brightest members of the lumbering industry.

T. G. Hall, second vice-president, Hall Bros., Limited, wholesale lumbermen, Toronto, was recently married to Miss Laura Pringle, of Watertown, N.Y. Mr. Hall and bride are at present spending the winter at Marlbank, where he is supervising the winter operations of the company, but they will occupy their new home on Normandy Boulevard, Toronto, in the near future.

Sir William Price has donated $25,000 to Laval University, Quebec, this being in addition to $25,000 given by the firm of Price Bros.' last year. The latest gift is made unconditionally and will be employed by the University for the encouragement of scientific studies. It will be known as "The Price Family Foundation." The premier of the province has publicly thanked Sir William for his gift.

It is understood that the wholesale lumber business of J. G. Cane & Co., Stair Bldg., Toronto, will be sold as a going concern. The late Mr. Cane, in his will, directs that his interest in the company be wound up. George Anderson, his partner for the past twenty-seven years, has also decided to allow his interest to be placed on the market. Mr. Anderson has not been in good health for some time and has been strongly advised by his physicians to retire.

Progressive Company Increases Sales Staff

Thos. Wilson of Hull, Quebec, who has been lately employed with the Workmen's Compensation Board as provincial inspector for planing mills, has accepted a position as traveller for the province of Ontario with the William Hamilton Company, Limited, Peterboro, and has entered upon his new duties. Mr. Wilson is well known to possibly 75 per cent. of the lumbermen of the province, having had extensive experience in installing machinery and operating sawmills, and as government inspector for planing mills and small sawmills, and needs no introduction to mill men.

J. J. Dorris, who has covered this territory for the past eight years for the William Hamilton Company, Limited, has been brought into the office at Peterborough and will in future have charge of the sales department. The William Hamilton Company have also appointed Vincent Woodbury, Timmins, Ont., as Northern representative in the T. & N. O. territory to Cochrane, and also on the Transcontinental Railway. With the addition of these two representatives the William Hamilton Company say they hope to be able to give more attention to the wants of the mill men throughout this province.

Some Changes in Hardwood Inspectorate

H. F. Holton, who was recently appointed inspector of the National Hardwood Lumber Association for Toronto and district, has been with the association for more than a year and previous to that was engaged with Hart & McDonagh, wholesale lumber merchants, Toronto. Mr. Holton was born and raised in Ontario. It is understood that J. E. Banks, late inspector of the N. H. L. A., has gone to Buffalo, where his home is and where he intends taking a position. H. H. Hastings will be Mr. Holton's assistant in the hardwood inspection work in the Ontario district.

H. F. Holton
New Inspector, Toronto district, N.H.L.A.

J. E. Banks
Retiring Inspector, Toronto district, N.H.L.A.

Manitowoc Shipbuilding Corporation, a corporation created under the laws of Wisconsin, has been granted an extra provincial license to do business in Ontario and to expend the sum of $40,000 in the operations of constructing, purchasing and repairing ships, barges and vessels of all kinds.

B. C. Mills Resume With Lower Wage Scale

Decrease in wages is now being forcibly put up to employees of sawmills in Vancouver. One of the first was the Vancouver Lumber Co., which announced an increase of hours, it being pointed out that while it had been possible during the war to operate on an 8-hour basis, it could not be done now. Southern pine had a freight advantage of $3.50, and, moreover, worked its employees ten hours a day, but it is not expected here that the base wage will be reduced to what is being paid in the South. The company's employees went out on strike, but an agreement was reached whereby they will accept the new basis, which is ten hours a day and a basic wage of 35 an hour. The plant of Hanbury & Co., which has been closed for some time, opened on Feb. 14, and operation will be on the same basis. It is understood that other plants on false creek, now closed, will adopt the same plan when they re-open shortly.

Timber Gives Permanency to Many Activities

While the Axe of the Woodman Cuts Out Present Crop for Use of the Mills it Must also Cut Out the Pattern of a Future Forest—The New Dispensation

Robson Black, Ottawa
Secretary Canadian Forestry Association

The Associated Boards of Trade in Northern Ontario recently held a successful and well-attended banquet at Cobalt. The various interests of the northern country, its development and progress were ably presented in a number of timely and forceful addresses. Among the speakers at the function, was Robson Black of Ottawa, secretary of the Canadian Forestry Association, who touched particularly upon the timber and pulpwood resources of the north and the important part they were playing in the expansion and activity of the hinterland, and the necessity for the preservation and perpetuation of the wooded wealth of New Ontario. Mr. Black reviewed briefly the part played by the forest resources as a contributory factor to all constructive activities in the Dominion of Canada. It was impossible, he said, to operate the Canadian railways without twenty million ties for replacements each year, or to run even one telegraph system without fifty thousand poles for maintenance, or to lift from a soft coal mine one ton of coal without first putting into the mine seven lineal feet of wood for pit prop purposes. The service of the forest extended in an equally significant way to the fisheries and manufactures. "I am purposely putting into the background" said Mr. Black, "the direct utilization of forests in such substances as pulp and paper and lumber in order that we may see that if we kick out the forest-prop we not only destroy forever the wood-using industries, the towns they have built up, the vast army of their employees, but we also put beyond reach the unreplaceable materials essential to agriculture, manufacture, stock raising, fruit growing and the maintenance of life itself in this northern climate."

Timber Growing Sole Use of Some Land

The speaker asserted that timber growing was the sole purpose to which over 80 per cent. of the entire area of Canada can be devoted. Of New Brunswick and Nova Scotia about 70 per cent of the total land area is non-agricultural. Even in such a prairie province as Saskatchewan fully two-thirds is a natural forest estate and useless for agriculture. Of Quebec's 250,000,000 acres, excluding Ungava, only about 15,000,000 acres have been put into farming and the relative position of forest land and farm land will never be seriously altered. In Ontario, more than 60 per cent. is non-agricultural and fit only for the production of timber crops.

The creed of forestry, said the speaker, is to cultivate on each acre of land the crop for which it is best adapted. If expert examination shows a township to be of good agricultural soil, let us devote that township to the annual crops of cereals, grasses or vegetables. If non-agricultural, it is the part of common sense to insist upon it producing something for the public welfare. In other words, what is unfit for farming should be made to produce timber, which, particularly in this day, is the incubator of pulp and paper and lumber industries and through them of new towns, new markets and a long chain of other important benefits. The development of the farm and the development of the forest should have no point of collision. In the kind of land each desires there is no antagonism or overlapping. On the contrary, the development of forest industries from the timber crops of non-agricultural lands supplements and stimulates the agricultural industry carried on in parallel areas. There is not a forester nor a progressive lumberman or paper manufacturer who would propose that good farm land should be retained permanently under timber.

Bush Whacking Process to Tragic Lengths

The speaker gave strong emphasis to the fact that, taking Canada as a whole, the bush-whacking process had gone to tragic lengths. We have more acres that have been cleared of trees and must be put back under timber in order to pay a profit than we have acres now covered with timber that can ever profitably be cleared for farming. A million square miles of Canada have been cleared of timber by the effect of forest fires on little of which a farmer will ever run a plow and make his salt. In the wake of forest destruction has come not an army of farmers—except for a few localities—but a howling wilderness in which the chimney smoke of the wage earner is never seen and not even the fur bearing animals can scrap a living.

"In the head office of insurance companies may be found a card index machine of such marvelous ingenuity that when an inspector wishes to see at a glance any class of policy holder of any age or place of residence, all that is necessary is to press an electric button and the information is instantly delivered. Press on button and out come all the New Brunswick farmers, age 55, whose endowment policies mature in five years. Press another and you get all the Canadian plumbers, age 37, who are carrying $100,000 or over. Each card runs back to its nest and comes to hand again whenever desired. It is not possible that our eagerness to look over the cards of farming and mining in Northern Ontario, we have neglected to swing into public view once in a while the well furnished tray of forest assets and forest industries and forest employment?

"I have said, there is no antagonism between the job of growing forests and the job of growing farm crops. The first asks only the square mile that the other cannot utilize.

Spruce Forests of North—What They Mean

"As long as free land was available near the railways of the prairie provinces, Northern Ontario was halted in its development and even yet the rivalry of the bare prairies must be felt for many years to come. Similarly, when the forests of the United States seemed to be abundant for all time to come, development of forest industries in Northern Ontario was pretty well limited to the lumber trade. Only when the threat of forest exhaustion was combined with an enormous increase in the use of newsprint on this continent, were the spruce forests of Northern Ontario translated, as under a magic wand, into great factories and armies of employees. To-day the forests of Northern Ontario stand as one of the supreme prizes of the North American continent.

Mr. Black reinforced this point by outlining the grave crisis which the newsprint and lumber industry in the Eastern United States now faces. Three thousand mills in the Southern States were certain to go out of existence within eight years because of forest exhaustion. President Dodge of the International Paper Company recently declared that in the Eastern States there were not enough spruce areas on the market to-day to justify the erection of two fifty ton pulp mills.

"You cannot duplicate the quality of Canada's white spruce," asserted Mr. Black. "Month after month the ugly menace of forest exhaustion closes in on the newsprint mills of Eastern United States but the ill wind of which Uncle Sam complains has proved a 'trade wind' to the argosy of Canadian pulp and paper manufacturers. From a petty cargo of $120 in value shipped to Uncle Sam twenty years ago, the Canadian paper mills put over the border last year $120,000,000 worth of pulp and paper. Uncle Sam pays more for the things that come from the Canadian forest, than for all other manufactures combined. Bare exports alone have the lifting power of $400,000 a day in keeping exchange even where it is. Without newsprint cargoes running south across the border, United States exchange would almost strangle Canadian trade.

No Surrender of our Splendid Timber

"A few years ago Iroquois Falls was all a piece of the silent wilderness. To-day it is a busy flourishing centre. It is one of the dividends of the forest possessions and is one of the inevitable harvests accruing to any country that can show the world the powerful triumvirate of pulp forests, plus water powers, plus railway facilities to a near market. Not many lands have got that combination many had, but have no longer. Northern Ontario is the present possessor of this mighty industrial magnet and from the point of view of the American business man, who sees our possessions and potentialities, perhaps in truer prospective, if we ever were commanded by some supernatural power to give up one of our natural resources we were better advised to surrender our mines than to surrender our forests. There is no need for doing either, let us hope, but it does not indicate any animosity toward the great mining in-

dustry to point out that a mine is a non-reproducible form of wealth and inevitably must face extinction while the forest, like the farm, bears a reproducible crop, giving of its wealth to-day and capable of repeating its contribution again and again and again.

"The basic difference between the extraction of metals and the extraction of forest crops cannot be stressed too much. It is true that the forests have often been treated as a mine but we are now at the edge of a new dispensation. Forest mining must cease and every area of forest on non-agricultural soil, so treated that while the axe cuts out a present crop for the use of the mill, it also cuts the pattern of a future forest. Pulp and paper industries with their annual organized forestry departments, are determined in self-defense to anchor the forest as they have anchored the mill dam. To operate their timber tracts, so that any future lumbering and paper making need be no more itinerant with itinerant towns and shifting population than is true of the growing of oats or turnips."

New Dam For Creating Water Storage

A Norwegian engineer, J. Stoere, has lately invented a new method for constructing temporary dams which may interest lumbermen engaged in log driving. The method is patented. The idea is to use a hose of canvas or other strong, pliable and waterproof material and to anchor it, collapsed, on the bottom and across the stream to be dammed. The hose is filled with water through filling hoses, which are placed with the mouths upstream. When the large hose is partially filled the process is continued by means of pumping until the water in the hose is under considerable pressure. Experiments

Showing the Stoere Dam Completed

carried out in Norway have demonstrated the feasibility of the method. The cut shows such a sausage dam erected for demonstration purposes at Hvalsmoen in Norway.

It looks as if the idea might be utilized to advantage by lumber concerns for creating water storages in slow-running rivers during the logdrive, for the purpose of recovering logs left on the shores by the falling water, and also to create for a short time a larger volume of water below the dam to move logs fastened in rapids in the same manner as stop log dams are now used.

The "Canada Lumberman" is indebted to Mr. L. N. Jenssen, C.E., of Montreal, for the information contained in the above paragraphs. Any reader who is interested can obtain further details through the Montreal office of the "Canada Lumberman."

National Association Goes to Chicago

The annual meeting of the National Wholesale Lumber Dealers' Association will be held in Chicago, Ill., on Tuesday and Wednesday March 29th and 30th, at the New Drake Hotel. Gordon C. Edwards of Ottawa, is one of the committee in charge of the convention programme and the banquet, and it is expected that a number of Canadians, who are members of the Association, will attend the forthcoming gathering.

A. E. Clark of Toronto, is one of the trustees of the N.W.L.D.A., W. W. Schupner is the new secretary of the Association, succeeding E. F. Perry some time ago. The latter is now a resident vice-president of the N.W.L.D.A., with offices at 66 Broadway, New York. Mr. Perry has attended the last two annual meetings of the Canadian Lumbermen's Association and took an active part in the proceedings, delivering interesting addresses, while Mr. W. W. Schupner was present at the 1919 gathering in St. John.

It is announced that the National Wholesale Lumber Dealers' Association is in a flourishing condition and that the membership is now 529, the largest in history.

The new Drake Hotel, which will be the headquarters of the Association, is conveniently located, and, as there will be a number of gatherings in Chicago during the week of the National Association meeting, it is desirable that hotel reservations should be made well in advance.

John W. McClure of Memphis, Tenn., is president of the National Wholesale Lumber Dealers' Association, and sends a hearty invitation to Canadians to be present at the forthcoming conclave in Chicago, on March 29th and 30th.

Figuring Costs in a Mixed Yard

The retailer in the small town, who is carrying a number of lines, is confronted with a serious problem in figuring his costs in such a way as to distribute them equitably, not to say equally, among the different commodities in which he deals.

The danger frequently is that the dealer who has his main business in lumber, will regard other building materials as so much of a side issue, and the resultant profits as so much "velvet," that he will forget to charge the overhead expense which should be figured.

This is not only unjust to the business itself, resulting in the reduction of profits—since the costs must be paid in one way or another—but it also results in putting the exclusive dealer, who is making his coal business carry all of the expenses of operation, at a disadvantage.

Sometimes the situation is further complicated by reason of the dealer conducting a manufacturing business. For instance, there is a retailer, who, in addition to carrying a full line of building supplies, such as lime, sand, cement, hardware, paints, etc., also operates a planing mill. For this member of the trade to figure out overhead with reference to all of these varied lines is a big task, especially as he is probably tempted, for the sake of convenience in book keeping, to take some of the expenses which pertain to the mill only, but are not to be classified as "productive labor," and include them in general overhead.

The main point of the whole question is that the man with many lines wants to know which of them are producing profits, and which are not. If he treats the business as a whole, he may be making some of his "live wires" carry an undue burden in the form of net losses on some others. Hence his business salvation depends on the proper separation of accounts.

In such yards as those referred to, the proper system would be to have separate sets of books for coal, lumber and building supplies proper, and to charge every expense which is directly applicable to their several accounts. Those which applied to all would have to be distributed proportionately. Under this head would fall office expenses, the salary of the proprietor or manager, teams, if these are used to haul for all departments, rent, taxes, etc.

Will Operate the Rat Portage Mill

D. McLeod, manager of the Keewatin Lumber Co., Keewatin, Ont., spent a few days in Toronto recently. He states that the company will this season, in addition to their plant at Keewatin, be operating the old Rat Portage Lumber Co. mill at Kenora, which they acquired in 1916. This mill is equipped with two band saws (one double and one single), one horizontal resaw, while four new horizontal, tubular boilers have recently been installed with about 750 h.p.

In connection with the acquisition of the English River limits by Mr. Backus and his associates, considerable timber will be available for the Rat Portage mill. It is one of the conditions of the agreement of Mr. Backus, who is president of the Keewatin Lumber Co. with the town of Kenora as well as with the Department of Lands and Forests, that a sawmill should be operated at Kenora. It is expected that the cut in the latter mill, which is also equipped with a lath department, will be 100,000 feet a day, the same as at the Keewatin plant.

Mr. McLeod is of the opinion that logging costs will be at least equal to those of last year, which were the highest on record. There has, however, been considerably increased efficiency on the part of labor. Both the Keewatin and Kenora mills will make boxes and box shooks during the coming season as formerly.

Lower Freight Rates Would Help Trade

Writing to the "Canada Lumberman" a central Ontario operator says.—"We believe there would be considerable lumber moving today if the old rate of freight was re-established. During the latter part of 1920 it was costing us 17½c at Toronto—about double what it cost in 1919. It looks as if the cut all over the province will be very much smaller than it was a year ago. This should help the values of dry stocks on hand, but it may be difficult to do business with the present freight rates. Several concerns are not buying much stock just now and are holding aloof until they see how business develops."

Pulpwood and Its Varied Activities

Pulpwood Demand May Soon Improve

In regard to the general pulpwood situation, it would seem that the market has improved a little of late although the change is scarcely perceptible at the present time. One leading firm state that in the east there seems to be quite a large stock of pulpwood, which is now being hauled out, but the demand is limited, as there seems to be a reluctance on the part of mills to contract for their supply of wood just now, but this is a condition that is affected in all lines of trade these days. More inquiries are being received for quotations and prices, which would indicate that consumers are beginning to take in hand the matter of purchasing their supplies of pulpwood.

Regarding the future, a leading operator recently said: "We are inclined to believe that just as soon as business conditions are normal and stable that pulpwood prices will see an improvement. Taking into consideration the high cost of production during 1920, the price of pulpwood to-day is down to a reasonable basis,—more or less the actual cost plus a reasonable profit for stumpage and carrying charges. This, in my opinion, is the right time for the mills to step in and pick up a supply of wood at very low cost. In regard to prices, $30.00, f.o.b. cars Watertown, is a very reasonable value at the present time.

Would Incorporate Forestry Engineers

A bill to incorporate forestry engineers as one of the "closed" professions, has been introduced in the Quebec Legislature. There already exists an association known as the Forestry Engineers' Association of the Province of Quebec, founded in 1916, which has as its aim the better safeguarding of the public interests in the matter of the forestry resources of Quebec, and it is claimed that incorporation would better serve the purposes in view. The principal office of the association is to be in Quebec. It is provided that the corporation may own property to the value of $5,000 per year, may make by-laws for the admission of members and safeguard the professional honor and dignity of the profession. All those who have exercised their profession of forestry engineers on December 31, 1920, are declared to be members of the association, providing that within six months they join the organization and pay the necessary fees. Those who previous to this date held a diploma from a foreign university are also eligible, and it is also provided that engineers in other provinces may be admitted by the executive council.

Others to be admitted must be of the age of 21, secure a diploma from the Forestry School of Quebec, and pass the examination provided by the association.

It is asked that the executive be empowered to draw up a tariff of fees, which, after being approved of by the Lieutenant-Governor-in-Council, may have all the force of law before the courts. None others than members of the association may term themselves forestry engineers under penalty of fine or imprisonment in lieu of payment, the fines going to the association.

Utilization of Hardwoods for Pulpwood

A live question to-day in both forestry and lumbering is that of the marketing of our hard-wood crop. The main problem in connection with the utilization of hard-woods is that of transportation from woods to mill, says A. V. Gilbert in "Conservation."

In the Muskoka region many experiments in the driving of hard-woods have been conducted, and with gratifying results. All drives have been short, under 50 miles, but the operators are reaching out to acquire timber at still further distances, and they are confident of the feasibility of driving it. In the region where they wish to operate, there are considerable areas of first quality yellow birch.

The common usage in preparing the hard-wood logs to drive has been to fell the trees and, to dry the timber, they are left in the woods. The bark is peeled off the trunk, but the leaves are left on to assist in drying out the moisture. The bark is usually piled around the bole of the tree to keep the wood from checking badly. The following season, the tree is "bucked" into logs which are hauled to the river bank, and there they are piled high and dry so that they do not lie in the water in the spring. When the drive commences they are "dumped" into the river and floated down with the soft-woods. The hard-woods, however, must not be allowed to remain in the storage booms, along with the soft-woods, as, otherwise, many would sink while waiting to be sawn. They must be sorted out and sawn first, though this sorting involves some extra trouble.

One lumberman informed an officer of the Commission of Conservation that he had been much pleased with his first experiment in driving birch logs. Out of 3,000 logs rolled into the river at a point which he had hitherto considered it impossible to successfully drive birch, all but 60 reached the mill. This sinkage loss of only 2 per cent. is remarkably small.

Another method now being tried is to make the logs when the tree is felled and haul them immediately to the river bank. At the peeling season they are peeled, and, after being allowed to dry for a few weeks only, are sent on with the drive. They, of course, do not check so badly as logs that have been left in the woods for a season; they evidently dry out to some extent also, as operators are having a degree of success with this method.

The usual successful experiments should interest pulp-wood operators in Ontario and Quebec who desire to use the hard-woods for pulp and to thus secure more spruce and balsam reproduction on cut-over lands. The present method of taking the spruce and balsam only and leaving the hardwoods, results in the conversion of the cut-over area into a forest of hardwoods, the latter smothering the pulpwood species. Pulpwood operators are consequently interested in the question, and have been themselves experimenting with the driving of hard-woods.

Eastern Company Has Good Year

At the annual meeting of the directors of the Wayagamack Pulp & Paper Company, held in Montreal recently, the business was of a formal character and the satisfactory annual report which was published some time ago was adopted without discussion. Good progress is being made on extensions to the buildings and equipment of the company at Three Rivers. The Board of Directors and officers of the company were re-elected without change. The Executive now consists of C. R. Whitehead, President and General Manager; James W. Pyke, Vice-president; Hugh MacKay, K.C., G. H. Duggan, Norman J. Dawes, Alex. Maclaren and Sir Wm. Price.

British Columbia Pulp Products Grow

Pulp and paper products sold by British Columbia mills during 1920 amounted to $21,000,000, it was reported by Hon. T. D. Pattullo, Minister of Lands, in his annual report to the legislature. The total value of forest products of the province of $22,000,000 over last year was shown by the figures submitted. The value of the forest products of the province in 1919 was $70,285,095, the value for 1920 is given as $92,628,807, and is twice the production of three years ago. Pulp and paper increased in value from $12,000,000 to $21,000,000 during the year.

An All-Electric Mill in Sweden

A large paper mill at Vargo, Sweden, was recently rebuilt upon the most modern lines. Formerly 20,000 tons of coal were consumed annually and the problem of maintaining this supply was a very serious one, but at the present time there is no coal whatever consumed at the plant. The boiler house contains seven "electric" boilers, each of 3,000 horsepower, and the current enters the boilers at a pressure of 10,000 volts without having to be stepped down. Each of the boilers is provided with three electrodes, and the coupling arrangements are such that steam generation can be regulated within 5 per cent. It is stated that full steam pressure can be raised in from five to ten minutes after switching on the current, and considerable economy in attendance is obtained, as compared with coal firing.

Busy Beavers Cut Down Poplar Trees

The discovery of a large and thriving colony of beavers on the creek two and a half miles south of Rodney, Ont., is creating much interest in that district, and steps are being taken for the protection of the industrious little animals.

The beavers have taken up squatters' rights on a farmer's land, and have erected three large dams and a mound home about ten feet in diameter. Poplar trees ten inches and larger in diameter have been cut down in the construction of the dams, which are very ingeniously built to withstand the spring freshets.

It was at first thought that the unexpected visitors were muskrats. An apple tree in the vicinity of the beavers' mound is reported to have been stripped of its fruit last fall, and a well-beaten path from the tree to the mound indicated where the apples had gone.

The Home Lumber Company—*Specialties*

"SPEAKING of specialties," writes the manager of a big retail lumber company in one of the big cities, "the writerq cannot pass the opportunity to suggest that this field be urged upon the retail lumber dealer. We have never hesitated at any time to take on a desirable specialty, and we always try if possible to obtain an exclusive contract. Our adherence to this policy has already shown some good results, and we are going to continue the sale of specialties and try to make our business a little more distinctive than the other fellow's."

And speaking of specialties, is our addition, how about specialties built of wood, in your own yard?

The lumberman of today has admitted in chorus that the time has come to sell not boards, but complete homes.

Why should the complete home be more desirable to sell than the complete hundred and one other articles that go about the home and the farm

Why not take the short lengths, and the wood ends, and the scraps that accumulate around your place of business and make them into things that are salable at a glance? Why not cut up your crooked stock, thrown in the back of the bin or out in the driveway, and construct IDEAS?

Would not a brooder, or a hog-pen, or a wagon bed present the idea of desirability of possession much more completely than the scraps of lumber?

You want the customer to buy your lumber—why not put the lumber in such shape that he WANTS TO BUY IT

A writer in a lumber journal, a man who described himself as a "tenant farmer," said recently that "I for one wish for the day to come when I can spend my time farming, and when the business of making the articles I need to assist me will be conducted by the local lumber yard."

"Twenty times more is sold through the eye than through the spoken word," was the saying brought up at a recent lumber convention, and twenty or a hundred times better is the chance of the lumberman today to sell articles that can be seen, rather than articles that must be described. When a customer comes into a retail yard will it be easier to sell him a lot of scraggy looking boards that CAN be made into a shipping crate to send that hog to market, or will it be easier to sell him by showing him the crate ready to go?

It won't be necessary to pause for a reply, as there is not a retailer living, or a merchant of any kind, but will answer that the finished article will "get over" the best.

That more lumber may be sold, and that each stick of it shall go to the place for which it is best fitted, is the ambition of every thinking man in the industry today. From the camp foreman who orders the proper lengths into which the trees shall be cut, to the man checking out the wagons in the retail yard, every person engaged in the production of lumber should visualize the end of each piece of lumber, should know that the stick is produced for a certain purpose, and should work toward getting the best out of it. And the man retailing these pieces of lumber should most of all be able to show the customer the exact articles which the customer wishes to possess, and he can do it only by the plan or by the finished article.

That lumber, precious as it is, should be mishandled, that it should be mis-cut, and wasted and carelessly and wrongfully used, is unthinkable. And yet day after day mankind is buying lumber and mangling it in an attempt to build something that has not been actually visualized, and in too many instances we of the lumber industry are allowing others to do it when it could be avoided.

Take Friend Wife when she wants a new dress, this particular wife being of the kind that "build their own." Does she buy a lot of cloth of the desired color and start in without an idea of where she is coming out. Not that lady. If she did there would be more of us in the fix that many lumber businesses are in.

SHE GETS A PLAN. Of course the woman folks call them patterns, but plans they are, and these plans are the FIRST thing she goes after. She may see the cloth she wants at Levy's, but before she buys it she hikes around to the pattern department and BUYS THE IDEA OF THE FINISHED ARTICLE. And there is never a scissors cut in that precious cloth until she has thoroughly adjusted in her mind the idea of that dress just exactly as her plans call for.

And yet we men who never even let her vote have gone ahead cutting and slashing at our stock of lumber and wasting material much more precious than her little bolts of cloth.

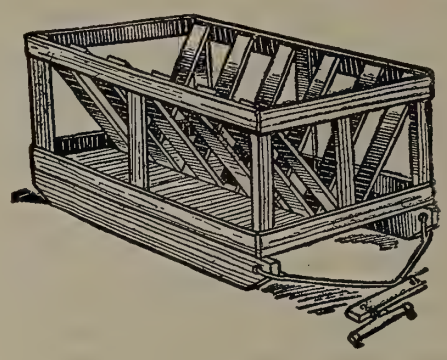
"The Plan's the Thing"

Without any more of the well known philosophy we wish to present a few suggestions for finished articles that can be made of the odds and ends of lumber around the retail yard.

Root Cutter.
Harrow.
Husking Table.
Vegetable Washer.
Swine Self Feeder.
Hog Rack (for wagons).
Feed Rack for Roughage.
Alfalfa and Clover Feeding Rack.
Feed Trough for Cattle.
Partitioned Hog Trough.
Calf Moving rack.
Dehorning Chute.
Fodder Feeding Rack.
Tobacco Frame.
Gates.
Repair Shop on Wheels.
Handy Nail Box.
Work Bench.
Wagon Box Storage Rack.
Sled Corn Harvester.
Corn Sheller.
Stone Drag.
Peanut Puller.
Portable Feeding Rack.
Hay Rack.
Weaning Trough.
Movable House for One Sow.
Adjustable Hog Trough.
Hog Feeding Trough.
Water Trough.
Sheep Rack.
Stack Covers.
Hay Rack for Sheep.
Salt Box for Sheep.
Seed Corn Rack.
Buggy Jacks.
Milk Stool.
Bolt and Tool Cabinet.
Loading Chute on Wheels.
Stiles.
Kitchen Cabinet.
Plate Rack.
Book Rack.
Tea Wagon.
Wash Bench.
Flour Box.
Lantern Brooders.
Chicken Feeders.
Movable Roosts.
Ladders.
Porch Swing.
Quilting Frame
Iceless Refrigerator.
Wood Box.
Clothes Box.
Hinged Chicken Nests.
Chicken Drinking Fountain.
Brood Coops.
Chicken Coops.

Every article above can be built at a retail lumber yard by any handy man, and a drawing of each article will be found in the booklet published by the Southern Pine Association, of New Orleans, La., "A Hundred Handy Helps."

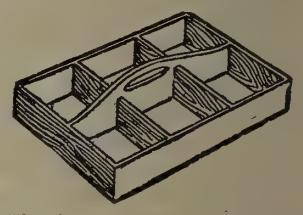
A Portable Feeding Rack



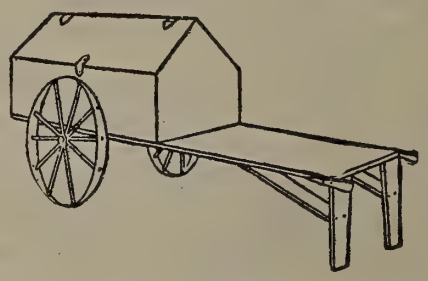
The 2 x 12—16 runners are rounded at each end. Three 2 x 6—12's nailed between the runners make a solid foundation. The uprights are 2 x 4's and the slats are 1 x 6's. The space between the runners and the bottom of the "V" shaped rack is floored and a 1 x 12 board running all around the rack just above the runners completes the manger. Southern pine should be used.

A Handy Nail Box

A farm nail box is a little time saver that every farmer needs. It is made of pine and divided into compartments for nails, screws, etc. It has a handle and is easy to carry.



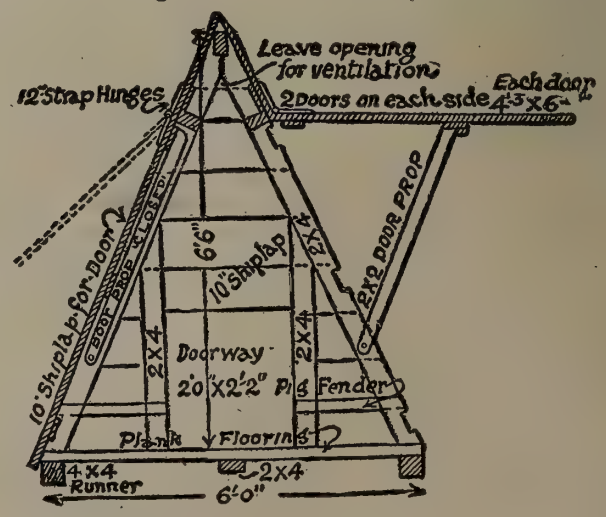
A Repair Shop on Wheels



A portable repair shop serves two purposes; it saves time because tools and material are kept together and the work bench and tools can be brought to the place where the work is to be done. The bench and box are made of pine.

A Movable House For One Sow

Here is an "'A" shaped house with both sides hinged at the top so that they can be opened for shade and airing. Build a plank floor on runners. There are 3—2 x 4—7 ft. rafters on each side. The cross support is about a foot from the top so that it will form a solid foundation for the hinged doors. There should be a small entry door



at one end and a ventilating door in the gable of the other end. Put some 2 x 4 pig fenders at the ends so that the old sow cannot hurt the little pigs. The following pieces of pine are needed: 1 pc. 4 x 4—16; 4 pcs. 2 x 12—12; 80 bd. ft. 2 x 4; 100 bd. ft. shiplap.

Why Not Start an Old-time "Housing Bee"?

Why do I call it a "Housing Holiday?" Because its chief purpose is to do good rather than to make money. Business is stalemated, it needs a change—a holiday might awaken it up, says George H. Holt of the Holt Timber Co., Chicago, in an interesting letter to the "Canada Lumberman."

Rules and habits are "off" on a holiday—even Union rules. A holiday has a definite limit. It is soon over. Anybody who wants the benefit of it must get it while it is going. In the United States the Sherman law penalizes price agreements—even price-reduction agreements. Canada hasn't that handicap.

A group of industries might agree to offer all of the material that is required for houses during a period of six months. At what price? Suppose we assume 1917 prices. Will people build at those prices? They did in 1917 and mortgage money was offered at those prices then. Why not now? Why should anybody expect prices to go below 1917 basis? It is useless for lumber alone to make the offer. It must comprise enough industries to fix the cost of the whole house in advance.

Local communities can take up their own problems. Say a town or locality needs a hundred or a thousand houses. Let them call a general meeting of the men, who want houses, and the men, who can build and finance them, and see if they cannot get together for that limited number on the 1917 basis —or some other basis.

Let the "profiteers" in materials or in labor forget their profiteering for this definite purpose. Let them contribute that much to the general good. Call off all labor rules and start an old-time "housing bee" in a modern fashion.

If this six months' holiday doesn't start up other business, it will not have been wasted, because, at least, all, who have bought or built houses will be "Anti-Bolshevist," and their children will have a chance that they don't have now.

I like the idea of a "Building Finance Corporation" on a large scale, because it can co-ordinate the factors promptly and get larger results in a shorter time. Such a company with $3,000,000 to $5,000,000 capital could keep in motion $50,000,000 to $100,000,000 worth of home-building.
